

Athena and Synapse Integration

Adaptable, scalable lighting control for parking lots, garages, and general outdoor site and area lighting.

Reps and specifiers can now leverage the integration between Lutron's Athena system and Synapse Wireless's SimplySnap to create a single point of control for projects with both indoor and outdoor lighting. Deliver seamless, high-performance lighting management — and give facility teams complete visibility and control to adjust lighting and set schedules for both indoor and outdoor lighting using Lutron Connect.

Synapse's wireless mesh network streamlines installation for outdoor applications — quickly deploy lighting controls in new construction or retrofit existing spaces without major disruptions. To determine eligibility, contact your local representative.
