

Overview

Any call to the Agvance API may generate a response with one of the following status codes. Please use the list below to determine the meanings of these codes.

0 = Success. A message of "OK" will be returned.

1 = Error. A message will be returned that should be displayed to the user letting the user know what happened.

2 = Error. A message will be returned that can optionally be displayed to the user letting the user know what happened. Used mainly by the Mobile Sales app.

3 = Descriptive. A message will be returned that should be displayed to the user letting the user know what happened, but still allow the user to continue. Used when logging in if there is a database version mismatch or if we need to send an administrative message to be displayed when logging in.
