FUELING INNOVATION

GREATER EFFICIENCY • MORE COMPETITIVE • BIGGER PROFITS

SOLUTIONS CREATED FROM REAL-WORLD EXPERIENCE

How did we make Energy Force the industry's most powerful and easiest way to manage propane and refined fuel delivery? It's simple, we came from that world. Our team includes over a century of combined real-world experience in propane and refined fuels for many cooperatives and independent retailers.

We knew marketers were looking for better ways to manage their businesses, but the industry lacked innovative technology. So we created our own comprehensive management system for marketers back in 1986, and have consistently improved it ever since.

Today, Energy Force is a seamless, integrated system of modules that streamline every step of serving your customers — and provides the training and support you need to get the greatest value from it. We've earned a place as the industry's leader for innovation, and a reputation for listening carefully to marketer needs.

Unlike our competitors, we're focused solely on energy management. We understand the challenges marketers face every day, and we help you be more efficient, more profitable, and more competitive, while making work easier for you and your team.

SUPPORTING YOU WITH TRAINING AND EXTENSIVE RESOURCES

Energy Force is more than a system to streamline your business. We also deliver the support you need to make the most of its features. In fact, because we succeed when you do, we listen closely to what marketers need and build those enhancements into our modules.

ON-SITE INSTALLATION - Our professional crews will install your truck computer mounting equipment.

ON-SITE CONSULTING - We'll work with you and your staff to make the most of Energy Force, and to convert your existing customer data.

TRAINING - We offer a variety of training programs, from on-site training for your team, to online training with our product support specialists, to regular meetings and events for our valued partners.

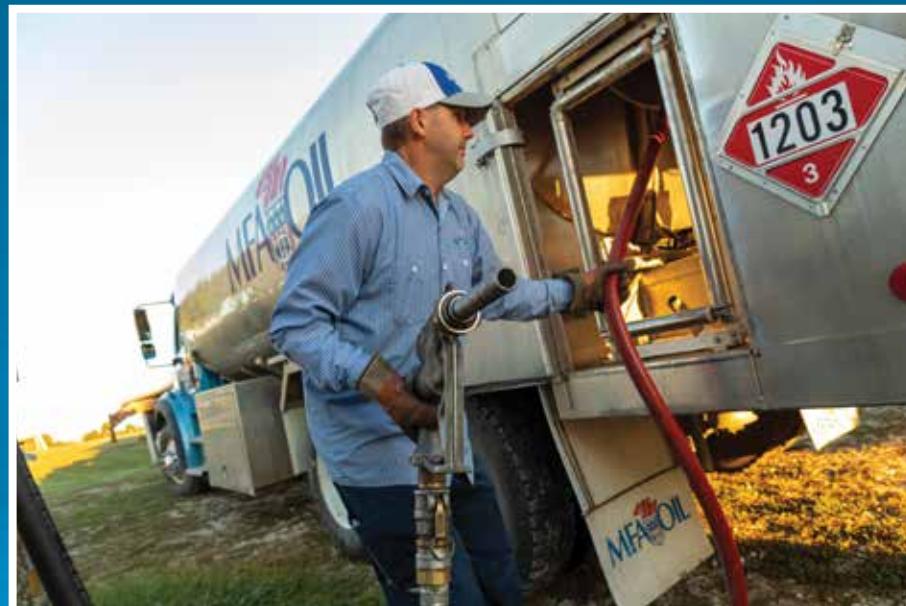

Contact us today to discover how easy it is to use Energy Force to become more efficient, more profitable, and more competitive!

ENERGY FORCE STREAMLINES EVERY STEP OF RUNNING YOUR BUSINESS AND SERVING YOUR CUSTOMERS

Is your propane or refined fuel business as efficient as it could be? Are your employees as productive as they should be? Are you filling tanks too early or driving too far?

Energy Force solves all those issues and more. Created for our industry, these modules automate every step including scheduling deliveries, optimizing routes, forecasting inventory needs, invoicing customers, handling service calls, receiving payments, and more. Access all the information you need to serve customers, dispatch drivers, and handle billing through one system, even for multiple fuels. Your drivers will become more efficient, delivering more gallons every week while reducing the number of drops, allowing you to dramatically cut overtime hours.

ET EnergyTrack TRUCK COMPUTERS

EnergyTrack software gives your drivers all the information they need to serve customers, so they make more money for you without wasting your CSR's time.

Data in each truck's computer gives turn-by-turn driving instructions and automatically calculates and generates customer invoices (combining multiple tank deliveries on a single ticket). There are no manual postings for the driver to make, and the system updates the trip report manifest for DOT checks. Our valued partners tell us their drivers make anywhere from two to ten more deliveries a day!

EM EnergyMap DIRECTIONS

Far more than a GPS or standard mapping programs, this system lets you plot tanks and schedule deliveries. Created specifically for propane and refined fuel deliveries, it shows exactly where each tank is with details.

O+

OptimizerPlus ROUTING & FORECASTING

We invented OptimizerPlus, the industry's first fully intelligent, automated routing tool, which analyzes customer tanks to create the most efficient routes. OptimizerPlus includes AI technology that has been tested and utilized in the real world since 2005, contributing to its track record of success.

OptimizerPlus employs artificial intelligence to resolve complex scheduling needs using a multitude of data points. It analyzes weather forecasts, prior heating season degree days and monitored usage to predict tank delivery needs based from a consumption formula for every propane tank. It can avoid over critical situations by predicting demand patterns. It outputs important information to managers so they can make the best decisions when demand increases.

This powerful AI tool can provide an overall improvement to driver delivery experience and customer service, while reducing operational costs. Your drivers won't waste time waiting for dispatcher instructions, filling tanks that don't need it, or learning routes. Routes are automatically created in the morning hours each day, so the driver can roll as soon as they're ready. This means new drivers can be as productive as a veteran driver on their first day.

OptimizerPlus is years ahead of competitor systems that force you to drag-and-drop to decide which truck will fill which tank. Instead, OptimizerPlus does the thinking and dispatching for you while you are asleep, saving you and your drivers hours each week. It analyzes every tank (including K-factor, call-in, Julian and monitored tanks) every day to create the most efficient routes and larger fills.

OptimizerPlus considers the weather and driver "off" days, so you don't run unprofitable routes. It adjusts for summer and fall fills, switches to partial fills during allocations, and prioritizes contract gallons when customers approach end dates.

CP

ConsumerPortal ONLINE PAYMENTS

Energy Force ConsumerPortal allows your customers to pay their bills online, view prior delivery history and contract balances, view TankMonitor readings and place orders for propane or fuels. Your CSR can also process all monthly budgets and balances with the click of a button.

TM

TankMonitoring ROUTING & FORECASTING

With TankMonitoring, eliminate the need to transfer monitor readings into customer accounts manually! TankMonitoring integrates with most major tank monitor types to import readings directly into Energy Force. Reading date and percent remaining in the tank are viewable at the tank level.

OptimizerPlus uses the daily readings for scheduling deliveries.

EI

EnergyImage ORGANIZED FOR EFFICIENCY

Why keep separate off line records of customer account information when you can easily maintain your documents in one secure, convenient location?

EnergyImage allows you to scan or attach like leases, contracts, tank sets, or other compliance documents to customer accounts.

Attach LP gas/safety checks for quick reference. EnergyImage allows you to retain critical decision-making information at your fingertips!

ES

EnergyService ORDER SYSTEM

Do you handle tank and HVAC service calls for customers? Our service order system uses your Energy Force customer data to track and schedule service orders, create proposals and invoices, monitor inventory, and bill accurately for parts. Your technicians can print invoices and collect payment at the customer location with EnergyService in the truck.
