

# Business Process Review

Every day, you use dozens of business processes and, all too often, experience the impact of inefficient or outdated procedures. Let our Professional Services team help identify ways to streamline processes and gain efficiencies in your business operations with our Business Process Review. Using a combination of deep industry knowledge, along with extensive real-world experiences and a thorough understanding of Agvance and/or EnergyForce systems, our team can align people, processes, and technology to help you get the most out of Agvance and/or EnergyForce.

## How it works:

### Recognize

Share with us the areas you have questions about or feel could be improved. Recognizing these areas gives us a starting point to help identify your business objectives and goals.

### Results

Answering your questions and going over our recommended best practices while on site with you and your staff is an effective way to put our findings to work immediately. Documentation of our recommendations is provided for your reference.

Business Process Reviews may be conducted at your facility or remotely by utilizing on-line tools.

If specific projects are identified such as data imports, adding new locations, or working through details of a business merger, our Professional Services team is available.

*Contact SSI to receive a quote and schedule your Business Process Review today!*

### Review

Working with you and your staff to review your current processes often reveals processes that may be outdated, or places where newer Agvance and/or EnergyForce features are not being utilized.

### Revisit

We will check back in with you a few weeks after our visit to see how the recommendations are working. If anything needs revisited, or if new situations have been identified, we can discuss the action to be taken.

## Benefits:

A full business process review conducted by an industry expert with extensive experience in Agvance and/or EnergyForce and the business environment

Collaboration with your staff to identify key business issues or concerns

Isolate specific processes which are outdated or may be streamlined

Leverage available tools to achieve business objectives
