## Project Green Barton-Upon-Humber

**This ambitious commercial project in Barton-Upon-Humber formed part of an expansion of a well-known kitchen-fitting business giving its fleet of other sites a welcome reprieve from increasing market demand in the sector.**

From full design, through to connection design, fabrication, and installation, the job itself took just under 5 months to erect steel in an enormous 990,000 square foot area. Included in the scope was metal decking, a 12-span warehouse building - 384m wide by 230m long - a 29,605m<sup>2</sup> mezzanine, ancillary buildings, two link bridges, and a plant gantry.

With the creation of over 1,200 jobs in the North Lincolnshire area, the kitchen giant could potentially bring millions of pounds to the area and surrounding communities.

Testament to Severfield's commitment to growth, innovation, and ground-breaking steel fabrication and construction, this project demonstrates qualities in line with our company ethos – with sustainability, community enrichment, and visionary construction at the forefront of this expansion, it's easy to see why we're at the cutting edge of our field!
