

## Episode 293: Allin spots in 4-Bet pots

HH1

100/200 around 40K to start pre

Rec Reg HJ \$450 we 3Bet JTss BTN \$2000 he 4Bet \$7200, we call(14700)

Flop Kh 8c 6s rb , he \$4400, we call(23500)

Turn 2s he X, we \$8500, he calls(40500)

Riv 5h he X we jam ~\$20K....

- Example of a hand played preflop than can easily spiral out of control postflop
  - JTss to this 4B sizing can probably find a fold
    - Call 5200 into a pot of 9500 now
    - Theory a call pre, reality against a lot of recs 4betting ranges probably toast therefore should be overfolding more
    - My reasoning: This specific villain is much wider with 4Bets, has a lot more give ups post flop, capable of more folds on later streets due to being too wide starting preflop. Trying to leverage my IP power here
- Flop, standard range cbet, how wide can we continue versus this?
  - To  $\frac{1}{3}$  im thinking any BD EQ is sufficient so 3 to BDDSD 3 BDFD, this board i have BDDSD to the lower straight wrapped around a 7 or 9 turn
  - But we just have a bunch of lower connectors to cover this runout to continue 98 76 65 45
    - Our combo AJs QJs QTs pure folds even to  $\frac{1}{4}$  sizing
    - Usually very sensitive to sizings, thinking MDF on earlier streets: the larger they bet the less of your range you need to defend
      - Regardless our combo is a pure fold
- Turn+River
  - River shove in theory isnt the greatest:
    - Actually blocks folds by villains FD spades also JJ TT
      - Would actually ideally shove other spades unblocking folds like A4 A5ss
    - But my value shove range here is KK AA AK pure

HH2

5/10/20 around 11K EFF

**We open HJ KcKd \$65, Euro Pro CO 3bets to \$225, we \$800 he calls(1630)**

**Flop Jd Tc 4d we cbet \$550, he calls (2730)**

**Turn 7h we \$2100, he calls (6930)**

**River 2s we jam for 8K....**

- Preflop, very deep for these stakes
  - Against linear 3betting ranges my 4Bet will be larger
  - Against polar 3betting ranges my 4Bet will be smaller
  - 4betting larger
    - Generates more folds from their range
    - larger reduces SPR
    - reduces positional adv, esp with some hand strengths
- Flop, should be close to range cbet, curious on sizings we went  $\frac{1}{3}$ , can probably go larger
- Turn relative blank, nobody should have the straight here in theory
  - There range slightly strengthens vs our entire range cbet of
- River,
  - Went for a value jam here
  - Speaking with Ping after the hand went down
    - Getting called by worse: QQ AJ AT Tx
    - Thought check QQ and value jam KK/AA
      - Bluff here is AK
- pretty clear value jam in solver world but in reality if people are playing way tighter, this can be a straight overplay with our hand
