

# Abnormal Security for Zoom

Protect your Zoom collaboration and prevent attackers from using the application to breach your business.

## High-Efficacy Threat Detection

Confidently identify suspicious URLs, compromised accounts, and user privilege risks.

## Unified Zoom and Email Insights

View suspicious activities from Zoom in the same portal as those stemming from your email platform.

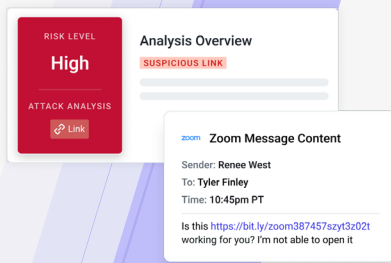

## Rich Context for Attack Investigation

Gain necessary context to investigate and remediate a potential threat on Zoom.

## Extend Abnormal's Security Functionality Across Platforms

In today's highly distributed workforce, attackers are not limiting their tactics to infiltrating businesses via email, and traditional security tools are not prepared to handle threats now originating from other communication channels. Abnormal Security for Collaboration extends the power of the Abnormal platform beyond email to collaboration applications like Zoom. Combining cloud-native architecture with advanced behavioral AI, Abnormal ingests signals from Zoom then surfaces suspicious activity that could indicate a threat on the platform.

## How Abnormal Secures Zoom

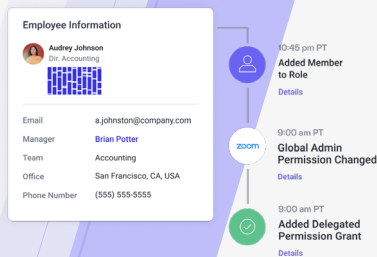

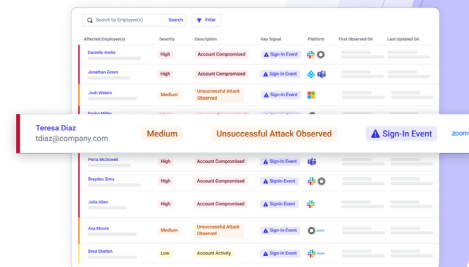

### Blocks Malicious Messages

Using behavioral models to understand access activity and detect deviations, Abnormal identifies suspicious URLs within Zoom Chat with high accuracy and surfaces detections in the Abnormal Portal. Security teams are able to correlate attack insights from Zoom and email to measure attack spread.

### Stops Compromised Accounts

Abnormal analyzes user login activity to confidently identify compromised accounts with authenticated Zoom access. The platform alerts security teams to unusual changes or events that could indicate a threat and then provides context to further investigate and remediate events.

### Reduces Privilege-Related Risk

Abnormal provides rich context about all users within the Zoom ecosystem. Security teams can view and monitor user permissions and privileges and receive alerts about changes that may indicate a threat. With Abnormal, security teams have both visibility and control to defend their Zoom environment.

## Try Abnormal Today

Protect your email-like channels, including Slack, Zoom and Microsoft Teams, against message-based attacks and account takeover.
