

Displace Your Secure Email Gateway

Stop the full spectrum of email threats and reduce your total spend when you swap your secure email gateway for Abnormal.

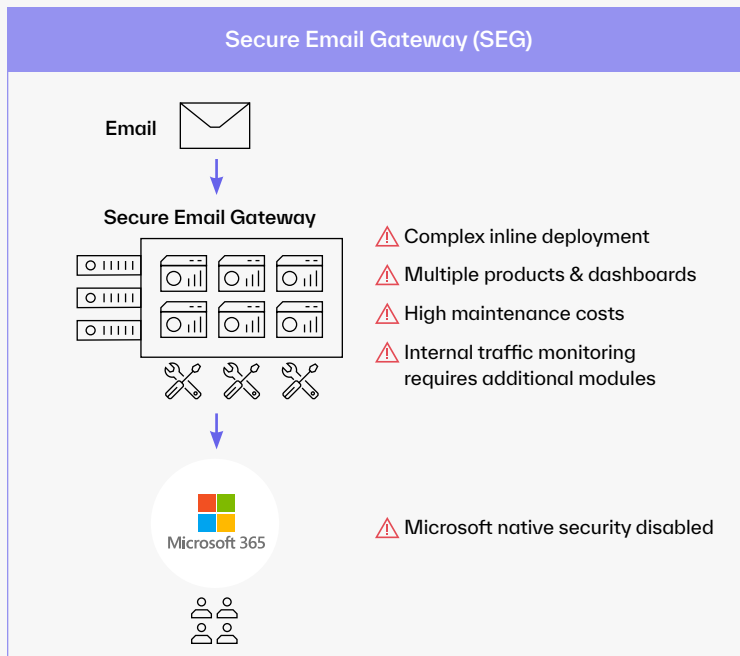

\$4M in risk mitigated annually with Abnormal

65% of Abnormal customers have no SEG

95% reduction in SOC email efforts with Abnormal

Problem: SEGs Were Not Built for Modern Threats

Secure email gateways (SEGs) were designed to defend against basic attacks that rely on known indicators of compromise—attacks that are high in volume but low in impact. In today's threat landscape, these solutions regularly miss advanced attacks, like business email compromise (BEC), invoice fraud, account takeovers, and more. They also fail to detect emerging threats that go beyond email into adjacent channels like collaboration applications. Meanwhile, organizations deploying SEGs pay twice for redundant email security, battle tedious management of rules and policies, and drain their resources on manual response and remediation processes.

Abnormal Overview

- Blocks targeted inbound attacks, including credential phishing, BEC, supply chain fraud, and more.
- Stops account takeovers, attacks executed through third-party apps, and other platform threats.
- Warns of high-risk configuration changes to user privileges, app permissions, and mail tenants.
- Fully automates triage and remediation of user-reported emails.

What Makes Abnormal Unique

- Cloud-native, API-based architecture ingests unique data sets that provide necessary context for detecting threats.
- Can be deployed in seconds and requires no tuning or operational overhead.
- AI-based behavioral anomaly detection learns normal behavior to identify suspicious activity.
- Provides multi-channel protection across internal emails, email accounts, email infrastructure, and adjacent channels like Slack, Teams, and Zoom.

Abnormal and Your Cloud Email Platform

- Protects against the full spectrum of attacks and remediates automatically and instantaneously.
- Enables smarter spend by eliminating redundant software and optimizes resources with complete automation.
- Prepares organizations for future threats with multi-channel protection and adaptable API architecture.

Protect More and Spend Less with Abnormal

Displace Your Secure Email Gateway

Stop the full spectrum of email threats and reduce your total spend when you swap your secure email gateway for Abnormal.

Migration Made Simple with Abnormal

Using Abnormal with native email security capabilities provides more protection and simplifies the email architecture, but removing the SEG can be an overwhelming task for security teams. Abnormal offers a simple and easy migration journey for customers. Customers will receive support from Abnormal experts throughout the migration process, along with detailed documentation to support the migration and onboarding journey.

Consultation

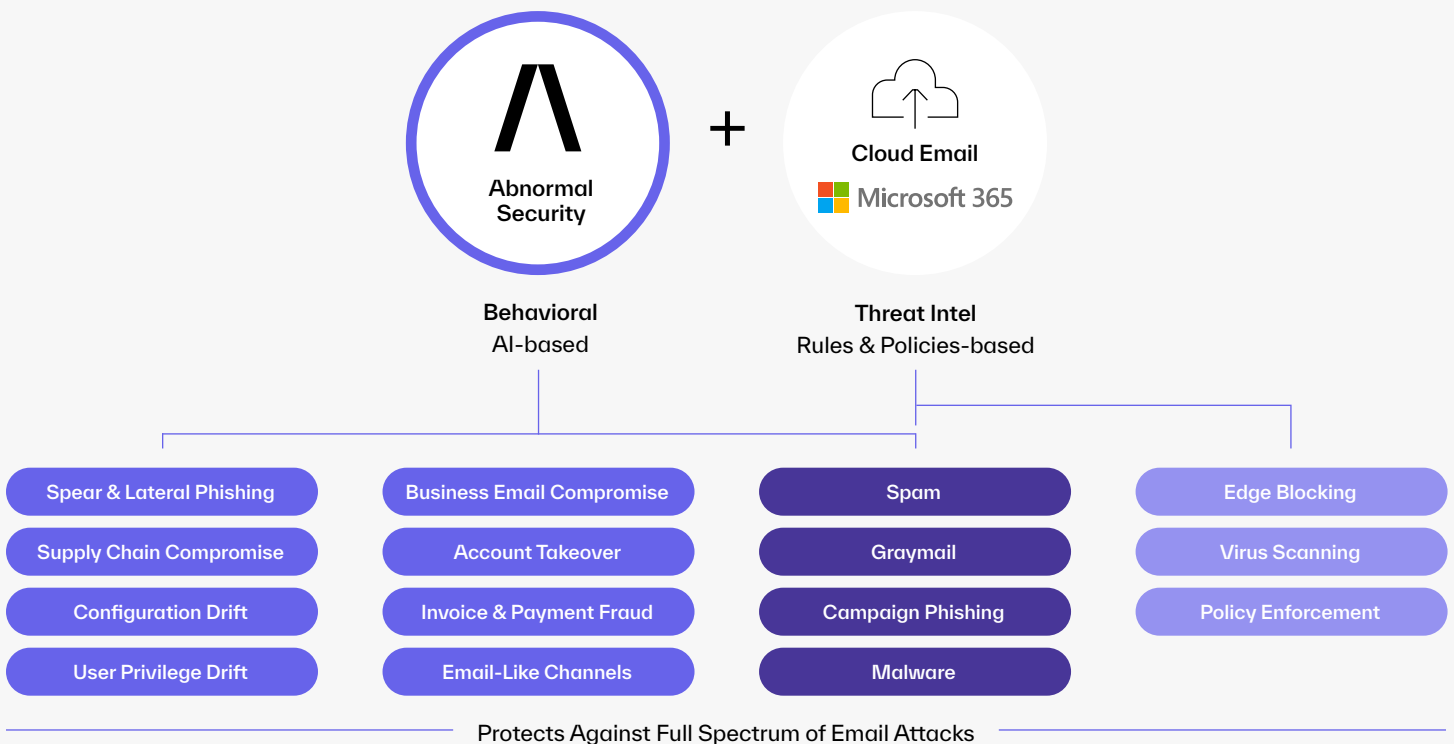

Pre-deployment

Learn about Abnormal's SEG Displacement Program, which provides support for migrating away from popular SEGs including Proofpoint, Mimecast, and Cisco. Determine requirements and success criteria, and develop schedule for migration.

Activation

Post-deployment

Over the course of five weeks, work through the stages of migration from inventory and planning to execution and confirmation with support of an Abnormal SEG Deployment Engineer.

Try Abnormal Today

Connect with Abnormal today to learn more about migrating away from your SEG.
