

FISCAL YEAR 2023 ANNUAL PLAN

INTEGRATED ECOSYSTEM RESTORATION AND HURRICANE
PROTECTION IN COASTAL LOUISIANA

FISCAL YEAR 2023 ANNUAL PLAN

LETTER FROM THE CHAIRMAN

Dear Louisiana,

It is my great honor to bring you the Fiscal Year 2023 Annual Plan. This year's plan embodies the mission of the coastal program, and highlights all the ways in which CPRA has hit its stride as an agency, a small but mighty workforce, and a global leader in coastal restoration and climate adaptation.

This year's \$1.35 billion plan represents the largest annual investment in the history of the coastal program. With 81% of funding going directly toward construction activities, this year's plan will bring many monumental projects envisioned in the Coastal Master Plan to life.

Additionally, CPRA has begun construction on two of the largest dredging projects ever undertaken by the State. The Lake Borgne Marsh Creation project in the Pontchartrain Basin and the Spanish Pass Marsh Creation project in the Barataria Basin will use nearly 30 million cubic yards of dredged material to restore nearly 4,500 acres of marsh and ridge. With nearly a quarter of the entire American dredge fleet actively working on coastal projects in Louisiana, this year promises to be the Year of the Dredge.

We are also seeing a historic level of federal investment. Louisiana will receive over \$2 billion in federal emergency supplemental disaster relief funds to build critical flood protection projects and increase resiliency for our coastal communities after Hurricanes Ida, Laura, and Delta. We will capitalize on over \$643 million in funding to Louisiana from the Infrastructure Investment and Jobs Act (IIJA) directed to the United States Army Corps of Engineers (USACE) to be spent on protection and restoration projects that would complement our Coastal Master Plan objectives.

This fiscal year we expect a much-anticipated federal permitting decision on the Mid-Barataria Sediment Diversion, a cornerstone project of the Coastal Master Plan. This project represents the largest coastal restoration effort ever undertaken in the U.S. and is a global example of innovative coastal restoration. Through decades of studies, careful planning, and intensive analysis, it is clear that reconnecting the Mississippi River is our best chance at preserving and sustaining coastal Louisiana for the next generation. As we face increasingly intense storms and changing environmental factors in combination with the drastic rates of land loss we are already experiencing today, implementing projects that maximize sustainability and increase resiliency could not be more important.

As our communities continue to recover from the impacts of the 2020 and 2021 hurricanes, one silver lining we observed was the sustainability of our restoration projects in the face of Hurricane Ida, one of the most powerful storms to ever make landfall in our state. Hurricane and Storm Damage Risk Reduction System also handled this major test as designed. USACE credits the restoration efforts accomplished by the state and CPRA as a key aspect of the success of its coastal defenses.

To bolster our state's proactive planning efforts, we continue to press forward with our Adaptive Governance Initiative (AGI) and Climate Initiatives Task Force. Through AGI, every department in state government is considering ways to adapt to our changing coast so that we can better serve the needs of our people today and in the future. Meanwhile, the Climate Initiatives Task Force unanimously approved the state's first plan to mitigate the causes of climate change by reducing greenhouse gas emissions to net zero by 2050. The Climate Action Plan contains a balanced set of recommendations to address the root cause of climate change while positioning the state to maintain its economic competitiveness in a low-carbon future.

This plan exemplifies historic progress in making once abstract concepts a reality. And it gets us that much closer to a more resilient, sustainable, and thriving coastal Louisiana.

Sincerely,

Kyle R. "Chip" Kline, Jr.
Chairman of the Board, Coastal Protection and Restoration Authority

OUR BOARD

Kyle R. "Chip" Kline, Jr.

FISCAL YEAR 2023

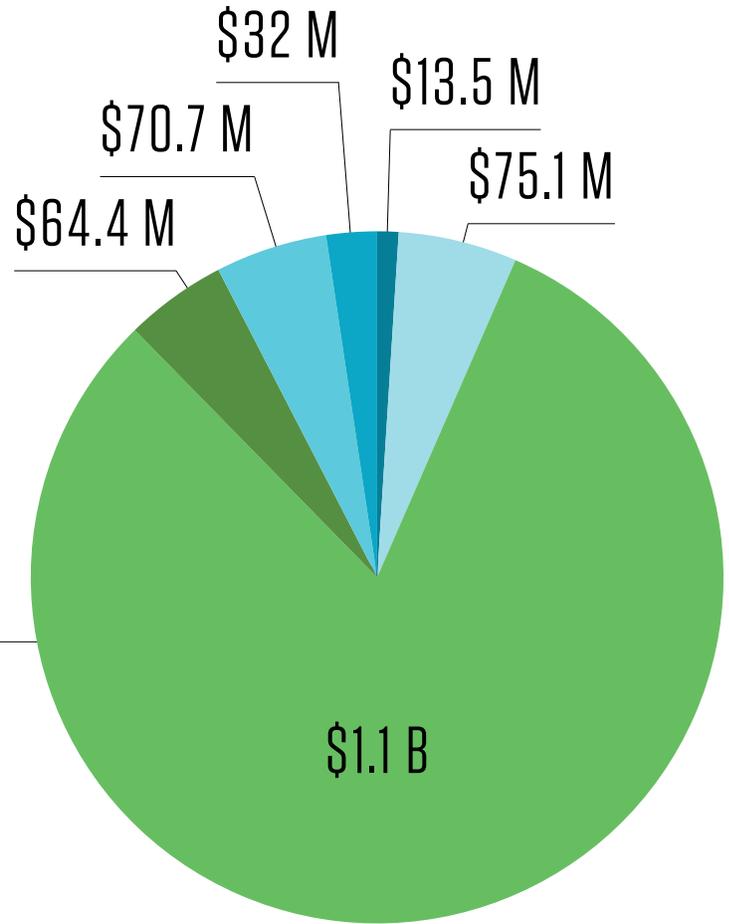

SUMMARY

CPRA is required by Act 523 of the 2009 Regular Legislative Session, amended by Act 604, to produce an Annual Plan that inventories projects, presents implementation schedules for those projects, and identifies funding schedules and projected expenditures. CPRA revenues are based on projections; expenditures occur only IF and WHEN projected revenues are received.

COMMITTED TO
OUR COAST

ANNUAL PLAN

A companion to Louisiana's Coastal Master Plan, the Annual Plan presents projected revenues and expenditures for the next three fiscal years, and provides an opportunity to highlight progress and efforts toward protection and restoration through anticipated project activity and implementation schedules.

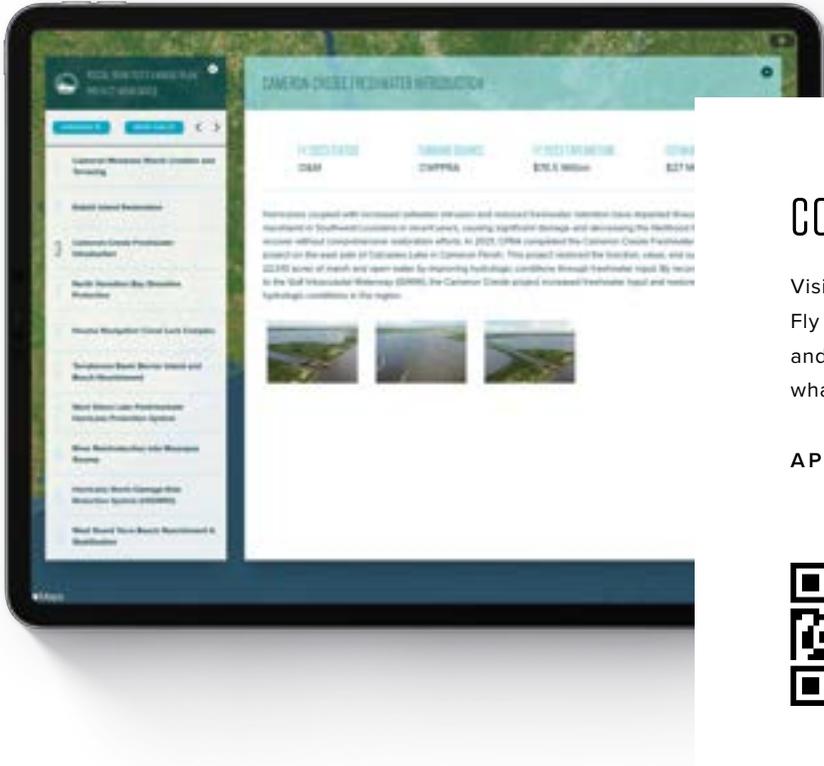

The Master Plan's \$50 billion budget estimate allows us to identify, plan, and prioritize projects based on need and alignment with our objectives, but it is important to note that the state doesn't possess all \$50 billion at the time the plan is created. Thus, the Annual Plan allows us to lay out in greater detail the short-term goals and expected expenditures, providing a more detailed representation of how available funding is planned to be spent annually.

This methodology and process allows us to compare, select, and prioritize projects for implementation – thoroughly vetting each proposed project and idea to ensure we build the best possible projects. This Annual Plan details a snapshot of CPRA's yearly progress.

“CPRA has remained unwavering in our commitment to fortifying Louisiana's coast from Holly Beach to Hopedale. We are continuing this effort in Fiscal Year 2023 with the advancement of several record-breaking efforts, including the Mid-Barataria Sediment Diversion, and the completion of 20 other highly-anticipated projects.”

– Bren Haase, Executive Director, CPRA

HISTORY

After Hurricanes Katrina and Rita devastated the Gulf Coast in 2005, Louisiana formed the Coastal Protection and Restoration Authority (CPRA) as the single state entity tasked with setting priorities and overseeing efforts to achieve comprehensive coastal protection and restoration in our state. Prior to this, efforts were handled by various local and state government entities with limited budgets and little to no coordination – and our coast was paying the price.

In response, the Louisiana Legislature formed CPRA and charged them with creating Louisiana's first-ever *Comprehensive Master Plan for a Sustainable Coast*. For the first time in Louisiana's history, a single state authority was driving coastal restoration and hurricane protection by marshaling the expertise and resources of the Department of Natural Resources, the Department of Transportation and Development, the Department of Wildlife and Fisheries, and other state agencies to speak with one clear voice for the future of Louisiana's coast.

Working with federal, state, and local political subdivisions, CPRA aims to establish a safe and sustainable coast that will protect our communities, our nation's critical energy infrastructure, and our bountiful natural resources for generations to come.

To that effect, CPRA is required by Act 523 of the 2009 Regular Legislative Session to produce an Annual Plan that inventories projects, presents implementation schedules for these projects, and identifies funding schedules and budgets. This Fiscal Year (FY) 2023 Annual Plan provides an update on the state's efforts to protect and restore its coast and describes the short- and long-term results expected as progress is made.

Dredging activities on the Spanish Pass Marsh Creation project

Caminada Headland

MAJOR EVENTS

MAY 1, 1927

THE GREAT FLOOD OF 1927

The flooding of the lower Mississippi River Valley in 1927 is considered one of the worst natural disasters in the history of the United States. More than 23,000 square miles of land flooded, hundreds of thousands of people were displaced, and nearly 250 people died.

This catastrophic event emphasized the need for a governing agency to prioritize river control structures and, ultimately, for coordinated river management efforts that would come to fruition in the future.

MAY 15, 1928

FLOOD CONTROL ACT OF 1928

This act authorized the U.S. Army Corps of Engineers to design and construct projects that help control flooding of the Mississippi River and its tributaries, putting our flood control on par with the other major projects of its time through the largest public works appropriation ever authorized.

JANUARY 1, 1929

BONNET CARRÉ SPILLWAY

The U.S. Army Corps of Engineers (USACE) built the Bonnet Carré Spillway between 1929 and 1931 as part of the federal Mississippi River and Tributaries Project, a flood-control program to replace the levee system constructed in the 18th and 19th centuries. The structure was first opened in 1937. The structure is designed to divert water from the Mississippi River to Lake Pontchartrain.

SEPTEMBER 9, 1965

HURRICANE BETSY

Hurricane Betsy struck New Orleans and greater south Louisiana in 1965, leaving behind major flooding, loss of life, and property damage. The storm became the first billion-dollar hurricane, causing \$1.2 billion in damage. In response, Congress ordered USACE to build a massive flood-protection system for New Orleans, which failed 40 years later during Hurricane Katrina.

APRIL 1, 1990

CWPPRA “THE BREAUX ACT”

U.S. Sens. John Breaux and J. Bennett Johnston, of Louisiana, presented their case to save the state’s vanishing wetlands in 1990, persuading Congress to enact the Coastal Wetlands Planning, Protection and Restoration Act (CWPPRA). Often referred to as “The Breaux Act,” CWPPRA was the first federally mandated restoration effort to take place along Louisiana’s coast and the first program to provide a stable source of federal funds dedicated to coastal restoration.

AUGUST/SEPTEMBER 2005

HURRICANES KATRINA AND RITA

Category 5 Hurricanes Katrina and Rita struck the Gulf Coast in 2005, resulting in more than 1,400 deaths in Louisiana, damaging more than 200,000 homes, displacing one million residents, and destroying 200 square miles of marsh. The hurricanes disrupted the national economy, spiking fuel prices, reducing energy reserves, and slowing global shipments.

The widespread impact of the storms highlighted the need to reform Louisiana’s hurricane protection systems and restore the destroyed wetlands upon which the national economy depends. The federal government agreed to support recovery efforts in Louisiana following the hurricanes, but rather than deal with multiple agencies, federal officials requested the state create a central authority for oversight of all funds and coastal restoration activities, as well as a coordinated plan of action with clear, achievable goals.

DECEMBER 1, 2005

FORMATION OF THE COASTAL PROTECTION AND RESTORATION AUTHORITY

Meeting in a special session to address recovery issues following Hurricanes Katrina and Rita, the Louisiana Legislature restructured the state’s Wetland Conservation and Restoration Authority to form CPRA in December 2005.

APRIL 30, 2007

INITIAL COMPREHENSIVE MASTER PLAN FOR A SUSTAINABLE COAST

In its first-ever iteration of a defined plan for sustaining Louisiana’s coast, CPRA outlined its strategy to coordinate small- and large-scale protection, restoration, and risk-reduction efforts coastwide. This initial plan, and all who played a role in its formation, laid the groundwork for a consolidated restoration effort, established focus and guidelines for planning, and set up a framework for project implementation that ensures we’re putting the best projects for our state on the map. Iterations were unanimously approved by the Louisiana Legislature in 2012 and 2017, updated to reflect advancements in science and technology as well as newly available information. The 2023 Coastal Master Plan is currently under development.

APRIL 20, 2010

DEEPWATER HORIZON OIL SPILL

A catastrophic oil rig explosion in the Gulf of Mexico resulted in 134 million gallons of oil being released into the ocean, tragic death and injury of numerous crew members, and a wide range of adverse health effects to marine mammal, bird, fish, seafood, and other coastal wildlife populations, in addition to millions of dollars in damage to our ecosystems and economy. This event remains one of the worst environmental disasters in the history of the U.S.

APRIL 4, 2016

DEEPWATER HORIZON OIL SPILL SETTLEMENT

The U.S. District Court for the Eastern District of Louisiana approved a settlement agreement and consent decree allocating billions in funding for claims related to natural resource damages under the Oil Pollution Act, Clean Water Act civil penalties, and the state’s various economic claims. This settlement, combined with prior *Deepwater Horizon* oil spill-related settlements and recoveries, totals approximately \$8.7 billion to be distributed in annual increments from 2017 to 2031 for Louisiana coastal restoration and economic damage rectification.

Because Louisiana’s leaders established the Coastal Master Plan framework long before the oil spill, projects were already identified, planned, and, in some cases, designed – making them ready for implementation as soon as a funding source was available.

FUNDING

The Coastal Master Plan is implemented through yearly plans that outline the agency’s priorities for the coming fiscal year and includes projections for an additional two years in the future. Projects are funded through multiple funding sources allocated to CPRA through various state and federal programs, agencies, initiatives, and organizations. Most funding sources have specific guidelines dictating how they can be used.

COASTAL WETLANDS PLANNING, PROTECTION AND RESTORATION ACT (CWPPRA)

(RECURRING)

Federal funds used for the planning and implementation of projects that create, protect, restore, and enhance wetlands in coastal Louisiana. Funds are derived through the Sport Fish Restoration and Boating Safety Trust Fund. The state provides a 15% match.

STATE MINERAL REVENUE

(RECURRING)

Used to match Louisiana’s funding responsibility for CWPPRA projects and fund agency programs and operations.

STATE SURPLUS FUNDS

Coastal protection and restoration is one of six eligible uses of surplus funds.

GULF OF MEXICO ENERGY SECURITY ACT (GOMESA)

(RECURRING)

Federal revenues derived from offshore oil and gas production and shared with the Land and Water Conservation Fund, the four Gulf producing states, and their coastal political subdivisions. In Louisiana, funds have been constitutionally dedicated to the Coastal Protection Trust Fund and are used primarily to fund hurricane risk reduction projects. The state receives its GOMESA payment each spring based on revenues generated during the prior federal fiscal year.

NATIONAL FISH AND WILDLIFE FOUNDATION (NFWF)

A total of \$1.27 billion allocated to the National Fish and Wildlife Foundation for Louisiana as a result of criminal plea agreements associated with the *Deepwater Horizon* oil spill. These funds may only be used to fund barrier island restoration or sediment diversions from the Mississippi and Atchafalaya Rivers.

NATURAL RESOURCES DAMAGE ASSESSMENT (NRDA)

A total of \$5 billion in settlement funds used for *Deepwater Horizon* oil spill restoration activities. This funding stream is overseen by the Louisiana Trustee Implementation Group (LA TIG), who approves restoration and implementation plans that utilize these funds. These funds will be received annually over the 15-year period ending April 4, 2031.

RESOURCES AND ECOSYSTEMS SUSTAINABILITY, TOURIST OPPORTUNITIES, AND REVIVED ECONOMIES OF THE GULF COAST STATES ACT (RESTORE)

Four funding streams managed by the RESTORE Council (Council-Selected Restoration Component and Spill Impact Component), and the U.S. Treasury (Direct Component and Centers of Excellence Component), accounting for 80% of the *Deepwater Horizon* oil spill Clean Water Act civil penalties. These funds will be received over the 15-year period ending April 4, 2031.

Louisiana's share of the RESTORE Trust Fund is as follows:

- Direct Component: approx. \$261 million by 2031
- Spill Impact Component: approx. \$551.5 million by 2031
- Council-Selected Restoration Component: \$182 million to date
- Centers of Excellence Component: approx. \$29 million by 2031

OBJECTIVES

The individuals who live, work, and play in coastal Louisiana all cherish it for different reasons. The coast belongs to residents, fishermen, industry representatives, recreational sportsmen, scientists, elected officials, engineers, and more. All of these stakeholders bring diverse viewpoints and ideas to the table. As such, it is imperative that CPRA utilize a comprehensive, impartial approach in selection and implementation of projects, driven by the best-available science. Our planning process

incorporates valuable feedback and is based on a variety of factors, goals, and objectives to protect the cultural heritage and landscape we all agree is too important to lose.

Used as a guide and vetting mechanism for project prioritization and implementation, CPRA's objectives define the purpose of the organization and serve as a driving force for all protection and restoration activities.

Groundbreaking ceremony at the Houma Navigation Canal Lock Complex

FLOOD PROTECTION

Reduce economic losses from storm surge-based flooding to residential, public, industrial, and commercial infrastructure.

NATURAL PROCESSES

Promote a sustainable coastal ecosystem by harnessing the natural processes of the system.

COASTAL HABITATS

Provide habitats suitable to support an array of commercial and recreational activities coastwide.

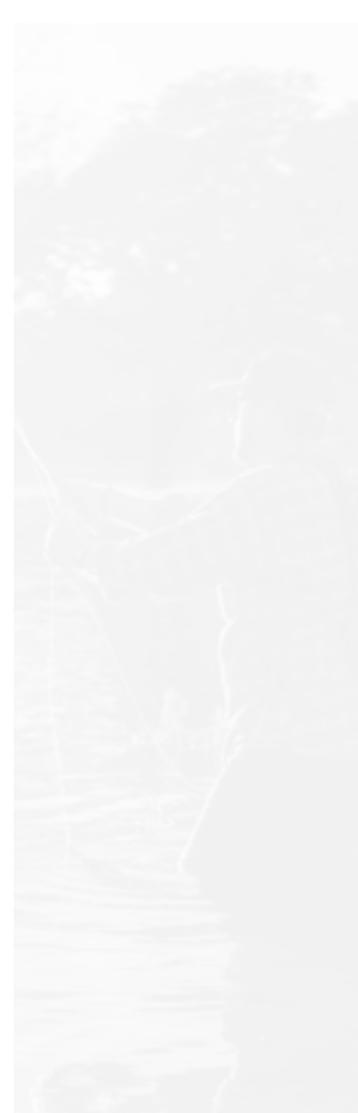

CULTURAL HERITAGE

Sustain the unique cultural heritage of coastal Louisiana by protecting historic properties and traditional living cultures and their ties and relationships to the natural environment.

WORKING COAST

Promote a viable working coast to support regionally and nationally important businesses and industries.

With these objectives guiding decision making, the projects highlighted in this Annual Plan are exemplary measures of CPRA's commitment to prioritizing and delivering complementary solutions to a complex, urgent problem while considering many factors to protect and preserve the culture, communities, and ecosystems vital to our success.

BUILDING A MORE RESILIENT LOUISIANA

PROJECT RESILIENCY

HURRICANE IDA RESPONSE & RECOVERY

Hurricane Ida made landfall on August 29, 2021, near Port Fourchon, Louisiana, as the fifth strongest hurricane to make landfall in the United States. The Category 4 storm devastated Southeast Louisiana with maximum sustained winds of 150 miles per hour and catastrophic storm surge. Five parishes were left nearly powerless in the aftermath, including the entire city of New Orleans.

Louisiana's recovery effort is ongoing, and the effects of the storm can still be seen and felt today. Coastal communities like Grand Isle and Jean Lafitte continue to rebuild homes and infrastructure.

Our projects require careful and detailed planning to maximize the use of each dollar and ensure longevity in the face of a changing climate and natural disasters. Many of our projects were in Ida's path and experienced the brunt of the impacts. However, due to innovative planning and careful engineering and design efforts, these projects withstood unprecedented circumstances and represent resiliency and hope for the future of coastal Louisiana.

The West Closure Complex, part of the Hurricane Storm Damage Risk Reduction System (HSDRRS) that protects the Greater New Orleans Area

HURRICANE IDA RESPONSE & RECOVERY

TRINITY-EAST ISLAND

Just months after the completed restoration of over 2.5 miles of continuous shoreline and 301 acres of beach habitat on Trinity-East Island, Hurricane Ida made landfall near the Terrebonne Basin. This immediate test of durability demonstrated the importance of how adequate funding for engineering and design, in a coordinated manner guided by the Coastal Master Plan, yields successful and resilient projects.

“The newly completed Trinity-East Island project faced an immediate test with Hurricane Ida, and it passed. The project’s success is a testament to the resiliency of our coastal projects and the importance of restoring and preserving Louisiana’s barrier island chain.”

– Gov. John Bel Edwards, September 2021

CAMINADA HEADLAND

Caminada Headland, a segment of land that extends into the Gulf of Mexico between Port Fourchon and Elmer’s Island, is no stranger to storm damage. It continues to face some of the highest rates of shoreline retreat in Louisiana, exacerbated by damage from Hurricanes Katrina, Rita, and Gustav. The area was in the center of Hurricane Ida’s path and took a direct and aggressive hit from the storm.

Despite the strength and severity of the storm, the recently constructed containment dike on the headland sustained minimal damage, allowing the construction team to continue with minimal delay. CPRA completed restoration of nearly 800 acres of beach and dune habitat on Caminada Headland in 2016, which remained largely intact post-storm.

HURRICANE STORM DAMAGE RISK REDUCTION SYSTEM (HSDRRS)

The Hurricane Storm Damage Risk Reduction System (HSDRRS) is the largest civil works project in the history of the U.S. Army Corps of Engineers (USACE), borne out of lessons learned from the devastation left behind by Hurricane Katrina. The project is built to withstand the kind of threat Hurricane Ida posed on our communities. During post-storm damage assessment, Gov. John Bel Edwards referred to it as the “silver lining” amid regional destruction.

The project stood up to its first major test during the storm and proved to be a resilience success story. The system of barriers, floodwalls, gates, and levees, all of which functioned properly, protects the parishes of East Jefferson, Orleans, and St. Bernard. The system experienced no levee breaches or over-toppings from high water, and the pumps within the system effectively removed water.

FEDERAL INVESTMENT IN LOUISIANA'S COAST

Driven by recommendations of the Coastal Master Plan, Louisiana has maintained a list of risk reduction and protection projects authorized by Congress for construction for decades. Planning in this manner allows CPRA to prioritize projects for funding based on need and begin implementation as soon as they are funded, putting allocated dollars to work and on the ground as quickly as possible.

Historical storm events along our coast, including devastation left behind from Hurricane Katrina due to lack of an adequate protection system, have exposed the need to invest in appropriate infrastructure that protects our coastal communities and the economic assets they hold. The 100-year risk and storm surge reduction system we have today, HSDRRS, was funded by Congress in direct response to Hurricane Katrina. It performed as anticipated during Hurricane Ida, protecting the Greater New Orleans area from what could have been another catastrophic devastation.

Unfortunately, this success isn't shared by every coastal community. Ida and other storms of the 2020 and 2021 hurricane seasons were a bleak reminder of just how many areas of Louisiana remain exposed to storm surge and other environmental hazards. Louisiana continues to be aggressive in seeking funding from every source available to put innovative projects on the ground that protect our communities and support our state.

2022 marked a monumental federal investment in coastal Louisiana that will benefit residents across the entire coast. \$2.6 billion in funding was allocated to Louisiana to support protection and hurricane risk reduction projects across our coast. Through the Extending Government Funding and Delivering Emergency Assistance Act (Supplemental Disaster Relief) and the Infrastructure Investment and Jobs Act (IIJA), the U.S. Army Corps of Engineers (USACE) has dedicated this funding for several of CPRA's coastal protection and restoration projects.

The Extending Government Funding and Delivering Emergency Assistance Act provides resources to Louisiana for continued Hurricane Ida recovery efforts, and the IIJA allocation is designated to increase coastal resilience through funding flood control, navigation, and ecosystem restoration projects.

“This historic federal investment should be seen as a national endorsement of Louisiana’s coastal program. We are seeing, for the first time, significant federal investment in Southwest Coastal, the Atchafalaya Basin, and Morganza to the Gulf. Residents across South Louisiana will benefit from this tremendous investment in our coast.”

– Chip Kline, Board Chairman, CPRA

EXTENDING GOVERNMENT FUNDING AND DELIVERING EMERGENCY ASSISTANCE ACT (SUPPLEMENTAL DISASTER RELIEF)

The law providing supplemental disaster relief included over \$2 billion for coastal and other flood protection projects in Louisiana, including:

- \$783 million for New Orleans to Venice Hurricane Protection project
- \$453 million for West Shore Lake Pontchartrain
- \$163 million for Atchafalaya Basin
- \$128 million for Comite River Diversion
- \$94.3 million for Southeast Louisiana
- \$8 million for Upper Barataria Basin
- \$3.8 million for Grand Isle and Vicinity
- \$3.5 million for Bayou Segnette Waterway
- \$3 million for Tangipahoa Parish

INFRASTRUCTURE INVESTMENT AND JOBS ACT (IIJA)

The IIJA includes over \$643 million in funding for 21 Louisiana coastal and water management projects, including:

- \$379 million for Morganza to the Gulf
- \$125 million for Southwest Coastal
- \$52.9 million for Atchafalaya Basin
- \$23.2 million for the Gulf Intracoastal Waterway

FLOOD PROTECTION & RISK REDUCTION

HOUMA NAVIGATION CANAL LOCK COMPLEX

FY 2023 STATUS:

CONSTRUCTION

FUNDING SOURCE:

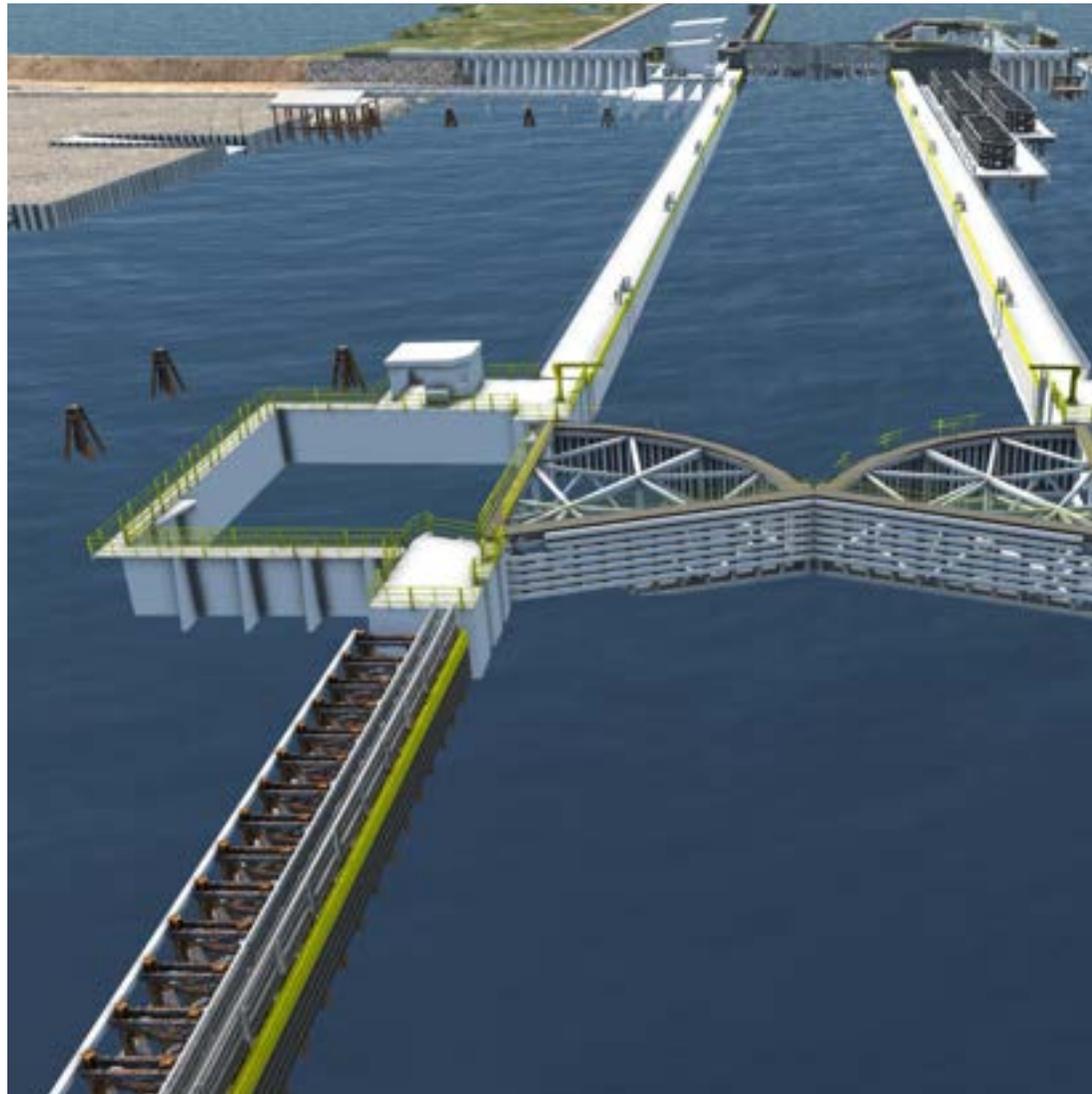

RESTORE, GOMESA

FY 2023 EXPENDITURE:

\$110 MILLION

ESTIMATED COST:

\$358 MILLION

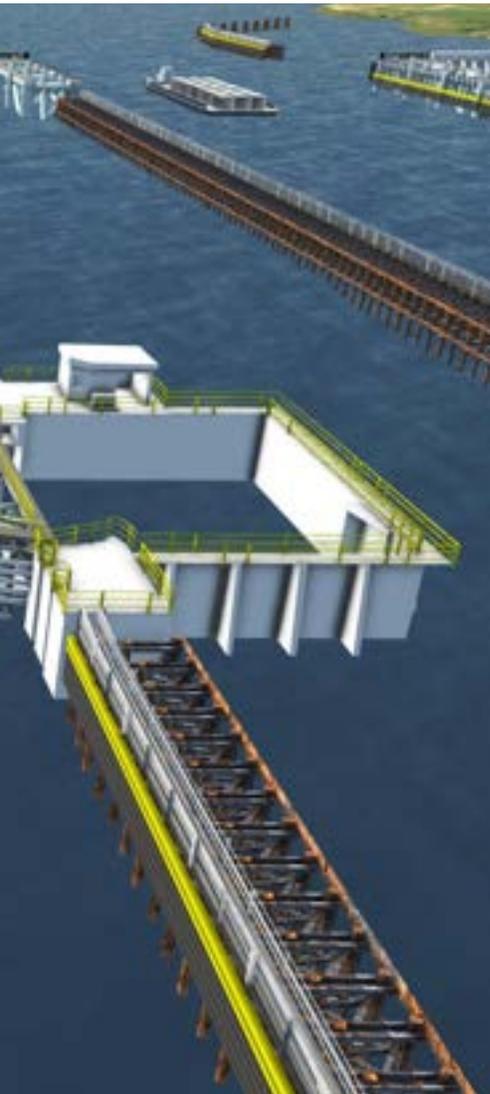

Houma Navigation Canal Lock Complex rendering

CPRA broke ground on Phase 1 of the HNC Lock Complex, a critical component of the Morganza to the Gulf Hurricane Protection System, in November 2021. The Morganza to the Gulf Hurricane Protection System is a levee, lock, and floodgate system designed to provide 100-year, Category 3 storm surge protection to more than 150,000 residents and nearly 2,000 square miles of land in Terrebonne and Lafourche Parishes.

Phase 1 of the HNC Lock Complex project, anticipated to be complete in the fall of 2022, will dredge over one million cubic yards of material to prepare the area for the lock complex and create 178 acres of marsh in six areas north of the complex along the navigation channel.

Once complete, the HNC Lock Complex will allow an increased time for navigation activities when the adjacent Bubba Dove Floodgate is closed to protect communities from storm surge or high-water events. During gate closures, the lock will allow vessels to travel in either direction on the HNC, enabling officials to close the floodgate earlier and keep it closed longer. Additionally, this will benefit the area's ecosystem that currently suffers from saltwater intrusion.

Phase 2 Construction of the HNC Lock Complex is anticipated to advertise for construction in 2022.

FY 2023 EXPENDITURE:

\$56 MILLION

ESTIMATED COST:

\$760 MILLION

Notably, the Extending Government Funding and Delivering Emergency Assistance Act (Supplemental Disaster Relief) passed by Congress in 2021 to support Hurricane Ida relief allocated \$435 million to the project for construction activities.

The West Shore Lake Pontchartrain Hurricane Protection project began as a study of the area between the Mississippi River and Lakes Pontchartrain and Maurepas in the aftermath of Hurricane Betsy. Leaders of the River Parishes expressed the need for greater protection for their communities, especially in the wake of the Hurricane and Storm Damage Risk Reduction System (HSDRRS) construction. The proposed project remained dormant due to lack of funding until 2012, when Hurricane Isaac flooded 7,000 homes in the area and Interstate 10, which delayed emergency response for days. Following pressure from state and local leaders, Congress authorized the project in 2016 and allocated funds in the Bipartisan Budget Act of 2018. Since that time, CPRA has led engineering and design activities to support construction.

In 2021, more than 50 years after inception, construction activities began on the West Shore Lake Pontchartrain Hurricane Protection project. Once complete, the structure will span from the Bonnet Carré Spillway to the Mississippi River levee, providing 100-year storm surge event protection and improved resilience to 60,000 Louisianans in St. Charles, St. James, and St. John the Baptist Parishes. The \$760 million project will span 18.5 miles, including 17.5 miles of levees, one mile of T-wall, drainage structures, pump stations, and several non-structural protection measures to form an integrated protection system.

Project groundbreaking ceremony in July 2021

Map depicting the close proximity of the West Shore Lake Pontchartrain Hurricane Protection project and River Reintroduction into Maurepas Swamp project

NONSTRUCTURAL RISK REDUCTION

While structural projects like levee systems and barrier islands are critical to protecting our coastal communities, the 2017 Master Plan also prioritized a list of nonstructural projects to further support some of our state's most vulnerable coastal communities through increased resiliency.

These projects include home elevations and floodproofing buildings to assist property owners in preparing for flooding or voluntarily moving from high-risk areas. These projects display CPRA's commitment to using a multifaceted approach to protection and balancing short- and long-term priorities through risk reduction measures.

\$2.6 MILLION

JEFFERSON PARISH PILOT PROGRAM

CPRA is partnering with the Governor's Office of Homeland Security and Emergency Preparedness (GOHSEP) to support elevation of 73 at-risk homes in Jefferson Parish – all of which are within a 2017 Master Plan priority area for nonstructural risk reduction projects. The plan notes these areas are expected to experience significant increases in storm-surge in the next 50 years. Notably, CPRA is leveraging state dollars to fulfill the local match requirements for the Federal Emergency Management Agency (FEMA)'s Hazard Mitigation Assistance (HMA) Grant and Flood Mitigation Assistance (FMA) Grant, allowing these previously approved, but on hold, projects to proceed.

SUSTAINABLE RESTORATION

SPANISH PASS

BARATARIA BASIN RIDGE & MARSH RESTORATION

NRDA

FY 2023 EXPENDITURE:

\$35 MILLION

ESTIMATED COST:

\$100 MILLION

THE PROJECT WILL BE THE LARGEST
MARSH CREATION EFFORT BY VOLUME
EVER CONSTRUCTED BY CPRA.

In 2021, CPRA started construction on the Spanish Pass Increment of the Barataria Basin Ridge and Marsh Creation project. The project will restore and create nearly 1,700 acres of ridge and marsh in Plaquemines Parish utilizing sediment dredged from the Mississippi River. This effort is part of CPRA's large-scale restoration strategy to address land loss in the Barataria Basin – an area experiencing some of the highest rates of land loss in the world. Since 2007, over 10,000 acres of land have been restored in the basin.

NRDA

FY 2023 EXPENDITURE:

\$32.1 MILLION

ESTIMATED COST:

\$115 MILLION

THE PROJECT WILL BE THE LARGEST
MARSH CREATION EFFORT BY ACREAGE
EVER CONSTRUCTED BY CPRA.

In late 2021, CPRA started construction on the Lake Borgne Marsh Creation project using 13 million cubic yards of dredged material to create and nourish more than 2,700 acres of deteriorating marsh located on the southern shoreline of Lake Borgne in St. Bernard Parish. The project is part of the large-scale restoration strategy for the Pontchartrain Basin to re-establish the bay rim and intertidal marsh habitat in the area. Additionally, the project will increase protection of the Hurricane and Storm Damage Risk Reduction System (HSDRRS), demonstrating CPRA's integrated approach to restoration and protection.

GOLDEN TRIANGLE MARSH CREATION

FY 2023 STATUS:

CONSTRUCTION

FUNDING SOURCE:

RESTORE, NRDA

FY 2023 EXPENDITURE:

\$20.2 MILLION

ESTIMATED COST:

\$54 MILLION

Construction activities on the Golden Triangle Marsh Creation project began in 2021. The project will create and nourish over 770 acres of marsh habitat to reduce storm surge, increase flood protection, and restore estuary habitat in Orleans and St. Bernard Parishes. Located east of New Orleans, the project will protect some of the most populated areas of St. Bernard Parish and support the Hurricane and Storm Damage Risk Reduction System (HSDRRS), the region's levee system, by restoring the wetland buffer that acts as a first line of defense against storm surge.

CAMERON MEADOWS MARSH CREATION & TERRACING

FY 2023 STATUS:

COMPLETE

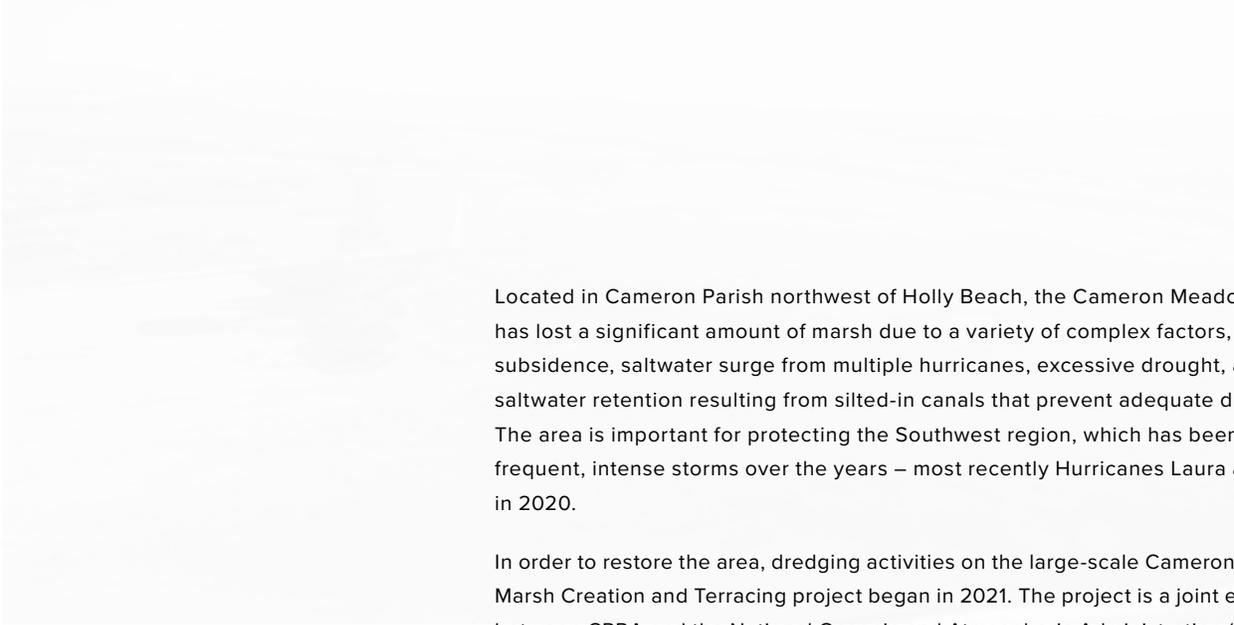

FUNDING SOURCE:

CWPPRA

ESTIMATED COST:

\$32 MILLION

Located in Cameron Parish northwest of Holly Beach, the Cameron Meadows area has lost a significant amount of marsh due to a variety of complex factors, including subsidence, saltwater surge from multiple hurricanes, excessive drought, and saltwater retention resulting from silted-in canals that prevent adequate drainage. The area is important for protecting the Southwest region, which has been victim to frequent, intense storms over the years – most recently Hurricanes Laura and Delta in 2020.

In order to restore the area, dredging activities on the large-scale Cameron Meadows Marsh Creation and Terracing project began in 2021. The project is a joint effort between CPRA and the National Oceanic and Atmospheric Administration (NOAA), who is the federal sponsor. The project will reinforce the natural buffer that exists in Southwest Louisiana, supporting protection for parishes on the coastal frontlines and adding acreage to act as storm surge buffers between heavily populated areas like Lake Charles. Project components include pumping 1.9 million cubic yards of sediment dredged from the Gulf of Mexico to restore 308 acres of marsh, constructing 11 acres through building 2.3 miles of terrace structures to reduce wave erosion and allow sediment deposition for land building, and creating additional water control structures and protection measures to reduce saltwater intrusion.

CAMERON-CREOLE FRESHWATER INTRODUCTION

FY 2023 STATUS:

COMPLETE

FUNDING SOURCE:

CWPPRA

ESTIMATED COST:

\$27 MILLION

A perilous combination of intense, successive hurricanes combined with increased saltwater intrusion and reduced freshwater retention have decimated thousands of acres of marsh in Southwest Louisiana in recent years. These conditions have caused significant damage to the ecosystem and decreased the likelihood that the marsh could recover without concentrated restoration efforts.

In response, CPRA completed the Cameron-Creole Freshwater Introduction project on the east side of Calcasieu Lake in Cameron Parish to reconnect the area to the Gulf Intracoastal Waterway (GIWW). The project was a joint effort between CPRA and the Natural Resources Conservation Service (NRCS) and is designed to reverse the intense impacts and damage the area has experienced by improving hydrologic conditions through freshwater input. Ultimately, the project will improve the function, value, and sustainability of over 22,510 acres of marsh and open water.

RIVER REINTRODUCTION INTO MAUREPAS SWAMP

FY 2023 STATUS:

CONSTRUCTION

FUNDING SOURCE:

RESTORE

FY 2023 EXPENDITURE:

\$34.6 MILLION

ESTIMATED COST:

\$200 MILLION

After decades of planning and much anticipation, the River Reintroduction into Maurepas Swamp project will break ground in 2022. The project will divert Mississippi River water into the Maurepas Swamp, located just west of Lake Pontchartrain, to restore natural processes and revitalize the ecosystem's health. The project represents a \$200 million investment that will benefit more than 45,000 acres of coastal marsh, forests, and wetlands in Ascension, Livingston, St. James, and St. John the Baptist Parishes.

After being disconnected from the Mississippi River by our levee system and losing access to freshwater flows that nourished the area, the Maurepas Swamp has degraded rapidly. The area was once home to several species of wildlife that no longer migrate there, fish populations that are diminishing, and flourishing plant life that continues to disappear. Both the 2012 and 2017 Coastal Master Plans detail a river reintroduction project, or freshwater diversion, to reconnect the swamp to the natural river flow that originally built and sustained it. This project will restore natural swamp hydrology and increase sediment loads that enter the swamp – giving the wildlife and vegetation nutrients necessary to thrive again.

A portion of the project area overlaps the \$760 million West Shore Lake Pontchartrain Hurricane and Storm Damage Risk Reduction project – which will reduce flood risk to over 60,000 people in St. Charles, St. John the Baptist, and St. James Parishes once complete. The commonality provides a key opportunity to save money by consolidating the engineering, design, and construction of the overlapping portions of the two projects.

MID-BASIN SEDIMENT DIVERSION PROGRAM

The Mid-Basin Sediment Diversion (MBSD) Program represents an innovative, first-of-its-kind effort composed of two restoration projects that address the root cause of Louisiana’s rapid coastal land loss crisis.

After decades of studies and input from leading scientists, engineers, and coastal residents, the state of Louisiana has determined that large-scale sediment diversions provide the best chance at restoring and sustaining our wetlands in order to preserve our communities, culture, species, and industries for generations to come.

Sediment diversions, the cornerstone projects of CPRA’s Coastal Master Plan, are an innovative approach to restoring areas of Louisiana facing some of the highest rates of land loss in the world. Fundamentally, the projects mimic natural land-building processes and harness the power of the Mississippi River through “engineering with nature.”

Sediment diversions are controlled structures that use a combination of manmade canals and gates aligned with the levee system, placed at strategic locations along the Mississippi River, to maximize the amount of sediment captured and transported into our basins. These projects offer a unique solution by strategically re-establishing hydrologic flows and restoring our wetlands in a way that is sustainable.

NFWF

FY 2023 EXPENDITURE:

\$15.7 MILLION

ESTIMATED COST:

\$799 MILLION

MID-BRETON SEDIMENT DIVERSION

The Mid-Breton Sediment Diversion is planned for the east side of the Mississippi River at River Mile 68, near Bertandville. It is anticipated that the project’s DEIS will be released mid-2023, followed by the same public comment process completed for the Mid-Barataria Sediment Diversion.

FY 2023 STATUS:

CONSTRUCTION

FUNDING SOURCE:

NFWF, NRDA

FY 2023 EXPENDITURE:

\$290 MILLION

ESTIMATED COST:

\$2 BILLION

MID-BARATARIA SEDIMENT DIVERSION

The Mid-Barataria Sediment Diversion represents one of the largest and most innovative coastal restoration efforts ever undertaken in the history of the U.S. The project is planned for the west side of the Mississippi River at River Mile 61, near Ironton. Once complete, the project has the capability to build and sustain an estimated 13,000 to 26,000 acres (about 20 to 40 square miles) of wetlands, depending on the rate of future sea level rise.

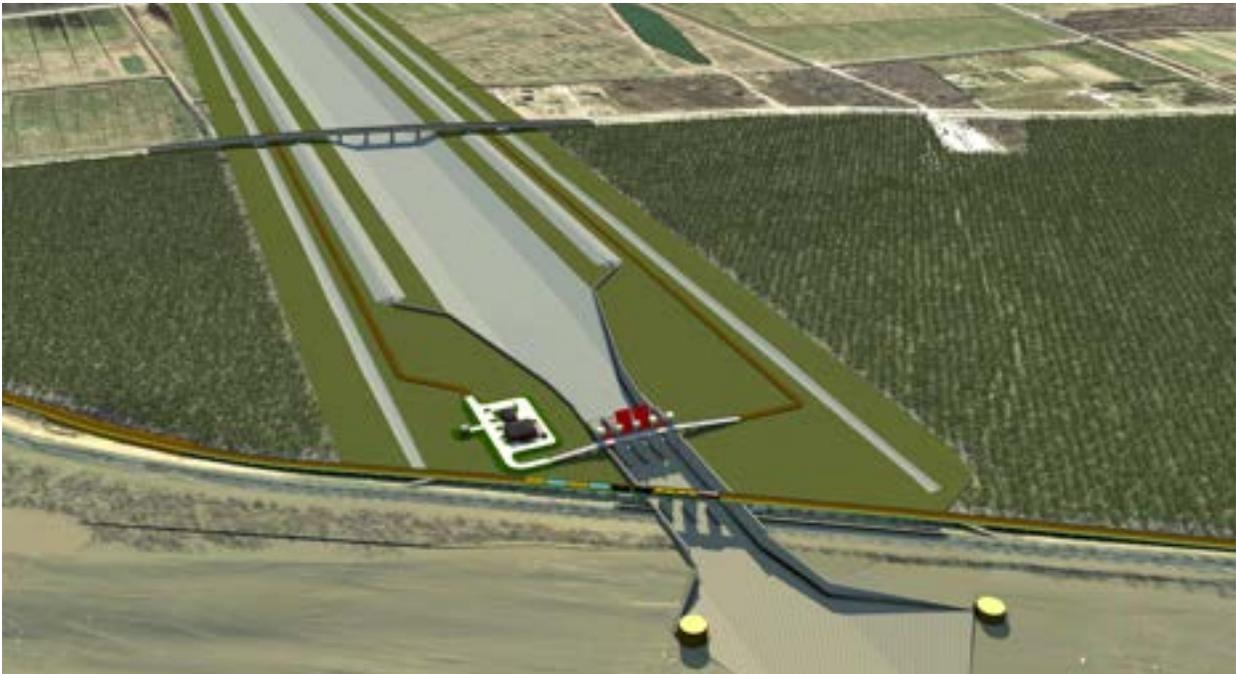

The project reached a critical milestone with the release of its Draft Environmental Impact Statement (DEIS) in 2021. This DEIS is a thorough environmental review and analysis of what the future of coastal Louisiana may look like both with and without the project. The document details the potential benefits and impacts of building the project and was available for public review and comment. CPRA continues to review and incorporate feedback into project and mitigation planning.

Significant project benefits include:

- Thousands of acres of land built and sustained through continuous marsh creation
- Storm surge protection for vulnerable communities
- Returning the basin to a functional estuary for wildlife, animals, and aquatic species
- Significant economic benefits to coastal parishes and beyond

The project is anticipated to reach significant milestones in 2022. The Final EIS, a second iteration of the DEIS that encompasses public commentary and updates, will be available in the summer, followed by a Record of Decision on permitting the project from USACE.

Mid-Barataria Sediment Diversion structure schematic

WEST GRAND TERRE BEACH NOURISHMENT & STABILIZATION

FY 2023 STATUS:

COMPLETE

FUNDING SOURCE:

RESTORE, NRDA

ESTIMATED COST:

\$102 MILLION

West Grand Terre, located in Jefferson Parish just northeast of Grand Isle, is one of the most historic and ecologically significant barrier islands in Louisiana. It is part of the chain of islands that separates Barataria Bay from the Gulf of Mexico – supporting productivity and economic activity in the estuary. The island provides habitat to many marine species and wildlife, including some endangered species, and is the first line of defense in protecting communities and critical infrastructure across southeast Louisiana from storm surge. Over the years, the island has experienced significant land loss due to a combination of factors: repeated storm damage, environmental changes, and human activities, including heavy impacts from the *Deepwater Horizon* oil spill.

The West Grand Terre Beach Nourishment & Stabilization project addressed the significant shoreline erosion and marsh subsidence on the island by using over 3.7 million cubic yards of material to restore over 251 acres of beach and dune shoreline, in addition to 147 acres of back-barrier marsh. Additionally, CPRA constructed marsh containment dikes and rock breakwaters to support land building and increase protection from wave impacts and storm surge.

TERREBONNE BASIN BARRIER ISLAND RESTORATION

The Terrebonne Basin Barrier Island and Beach Nourishment project includes restoration of two barrier islands and one headland located on the southern perimeter of the Terrebonne Basin. These three landmasses – West Belle Headland, Timbalier Island, and Trinity-East Island – are a part of the Terrebonne Basin barrier shoreline system which provides critical storm surge protection to Terrebonne and Lafourche Parishes. Additionally, the islands are home to several iconic Louisiana wildlife species, providing nesting habitat and breeding grounds and supporting the overall functionality of the ecosystem. These barrier islands have endured significant erosion over the years from wave impacts and storm events.

The project created and nourished 1,011 acres of marsh, dune, and beach using over 11 million cubic yards of material, dredged from an area commonly known as Ship Shoal. In total, the project includes restoration of over seven miles of shoreline.

FY 2023 STATUS:

COMPLETE

FUNDING SOURCE:

NFWF

ESTIMATED COST:

\$170 MILLION

TRINITY-EAST ISLAND

Trinity-East Island is part of the Isle Dernières Wildlife Refuge, named for Isle Dernière – the “Last Island.” The Last Island Hurricane of 1856 destroyed Isle Dernière, a once-popular resort island on Louisiana’s Southeast coast, causing damage that ultimately split it into five individual islands: Wine, Trinity, East, Whiskey, and Raccoon.

The Trinity-East project, completed in 2021, included restoration of over 2.5 miles of continuous shoreline and 253 acres of beach habitat on the historic barrier island. Completion of the project marks CPRA’s largest barrier island restoration to date. Notably, this project was completed a few months before Hurricane Ida made landfall in August of that year. Fortunately, the island endured this immediate test, withstanding a Category 4 storm.

TIMBALIER ISLAND & WEST BELLE HEADLAND

Restoration of 79 acres of beach on West Belle Headland, near West Belle Pass, was complete in 2021, and restoration of 238 acres of beach and marsh on Timbalier Island was complete in spring 2022.

Dredging activity on
Trinity-East Island

NORTH VERMILION BAY SHORELINE PROTECTION

FY 2023 STATUS:

CONSTRUCTION

FUNDING SOURCE:

**STATE SURPLUS,
GOMESA**

FY 2023 EXPENDITURE:

\$7.6 MILLION

ESTIMATED COST:

\$7.9 MILLION

The North Vermilion Bay Shoreline Protection project, which will begin construction in 2022, will create approximately 20,500 feet of shoreline protection along the north rim of Vermilion Bay on the east and west sides of the mouth of Boston Canal in Vermilion Parish.

While CPRA's focus remains on protection and restoration projects for our state's coastal landscape, we also recognize a driving motivation behind preserving our coast is so that Louisianans can enjoy it. The FY23 Annual Plan includes allocations and projects to support recreational use of coastal areas across the state, as these projects align with CPRA's vision to retain our Sportsman's Paradise. CPRA has partnered with several other state agencies to successfully plan and construct these projects, blending resources and expertise for a comprehensive approach to implementing these coastal projects.

PROTECTING RECREATION, CULTURE & HABITAT

POINTE-AUX-CHENES WILDLIFE MANAGEMENT AREA ENHANCEMENT

The Pointe-aux-Chenes Wildlife Management Area is a marsh and brackish area home to ponds, bayous, and canals located south of Houma in Terrebonne Parish. The area is known for outstanding redfish fishing and is a recreational hub for a wealth of hunting, trapping, boating, and camping activities.

In summer 2022, CPRA will complete construction on the Pointe-aux-Chenes Wildlife Management Area Enhancement project. The project is funded using *Deepwater Horizon* oil spill settlement dollars specifically set aside for recreational areas that were closed to the public during oil spill cleanup. The project includes seven new boat access fishing piers and five road access fishing piers, as well as a pirogue launch, renovated boat launch, and pirogue pullover.

Newly constructed boat access fishing piers in Pointe-aux-Chenes Wildlife Management Area

ESTIMATED COST:

\$4.5 MILLION

CYPREMORT POINT STATE PARK IMPROVEMENTS

Cypremort Point State Park, located in South Central Louisiana, is a popular location for recreational fishing, camping, crabbing, water skiing, and sailing. Notably, the area is surrounded by thriving marsh home to a wide variety of wildlife from nutria and alligator to deer and black bears, in addition to numerous bird species. The area also features a manmade beach that is a central attraction for park visitors.

The Cypremort Point State Park Improvement project will reinforce and restore physical features of the park in addition to upgrading and adding new infrastructure features that will increase accessibility and the overall experience for visitors. At the end of 2021, CPRA completed restoration of the public beach by placing 18,000 cubic yards of new sand that restored the existing beach footprint, extended the beach out approximately 100 feet, and reinforced the existing rock embankment on Quintana Canal to better support the area. Infrastructure enhancements underway in 2022 include construction of a new marsh boardwalk, which will serve as a walking trail directly into the marsh to view habitat and wildlife, repairing and upgrading existing roads and parking areas damaged by repeated flooding, and constructing a new RV campground.

FY 2023 STATUS:

CONSTRUCTION

FUNDING SOURCE:

NRDA

FY 2023 EXPENDITURE:

NRDA

FY 2023 EXPENDITURE:

\$102,000

ESTIMATED COST:

\$37 MILLION

ISLE-AU-PITRE ISLAND RESTORATION

Isle-au-Pitre is located on the eastern edge of the Biloxi Marsh in St. Bernard Parish. The island is in a remote location, largely undisturbed by human activity, and is home to bird species that were injured during the *Deepwater Horizon* oil spill, making it one of Louisiana’s most important colonial water bird nesting habitats. The island’s footprint historically spans over 40 acres total. However, it has degraded dramatically since 1989, losing close to 90% of its acreage. As of 2020, only 40 acres remained in total, with less than two acres of suitable nesting habitat.

The Isle-au-Pitre Island Restoration project, which is currently undergoing early engineering and design efforts, will restore approximately 50 acres of colonial water bird nesting habitat. Additionally, CPRA will enhance nesting conditions by elevating portions of the island with dredged sediment and plant suitable vegetation for nesting Brown Pelicans and wading birds.

FY 2023 STATUS:

COMPLETE

FUNDING SOURCE:

NRDA

ESTIMATED COST:

\$16.4 MILLION

RABBIT ISLAND RESTORATION

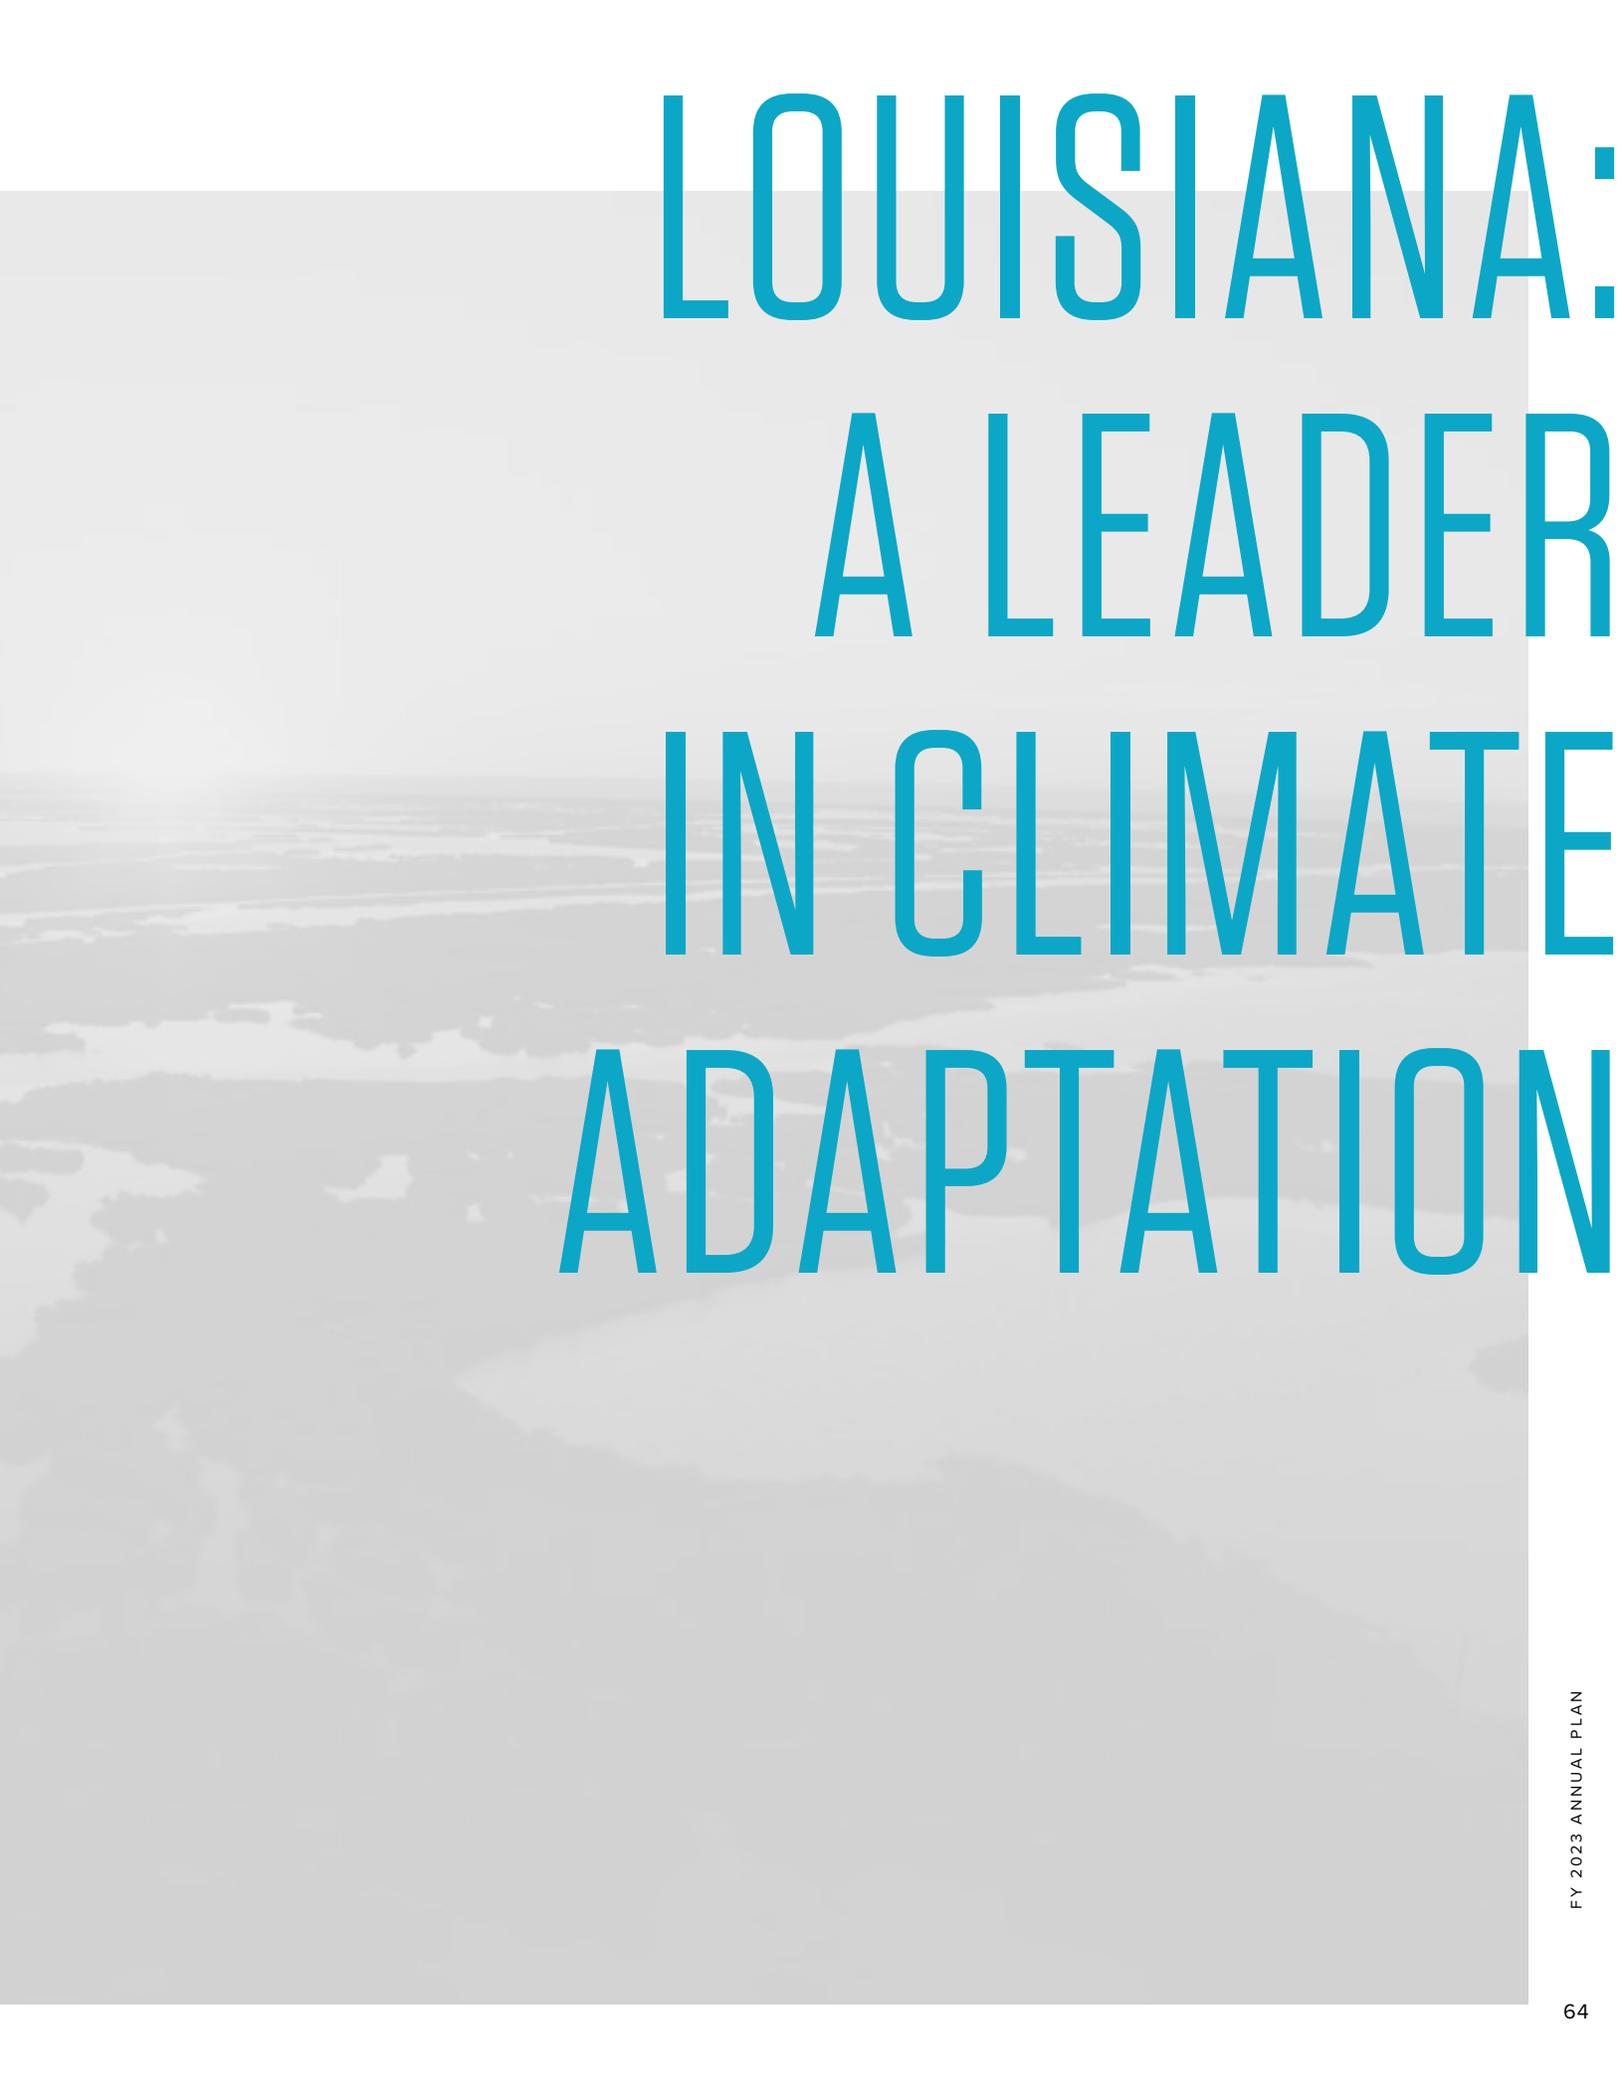

Between 2016 and 2018, approximately 50% of Brown Pelican nesting habitat on Rabbit Island, located in Cameron Parish, was lost to continuous over-washing tides and storm surge. As the only Brown Pelican colony in Southwest Louisiana, rebuilding and protecting this state bird habitat was of critical importance. In 2021, CPRA completed restoration of 102 acres on Rabbit Island using sediment dredged from the Calcasieu Ship Channel; these dredging activities also supported continued maintenance efforts of the channel.

Native vegetation, grasses, and shrubs were planted on the island to support and enhance the nesting quality of the island. In addition to the Brown Pelican, the island is home to egrets, herons, ibis, terns, and other colonial nesting water birds. Many of these species are listed as “species of greatest conservation need” in Louisiana’s Wildlife Action Plan, and all were impacted by the *Deepwater Horizon* oil spill.

Prior to restoration activities, the Louisiana Department of Wildlife and Fisheries (LDWF) banded 322 Brown Pelicans on the island, many of which have since returned. The island’s first nesting season in 2021 following restoration far exceeded expectations, with 6,100 nests observed on the newly restored habitat.

LOUISIANA: A LEADER IN CLIMATE ADAPTATION

CLIMATE INITIATIVES TASK FORCE

Louisiana’s Climate Initiatives Task Force was first established through an Executive Order of Governor John Bel Edwards in August 2020. The decree marked the start of Louisiana’s most aggressive effort to reduce greenhouse gas emissions and avoid impacts of climate change, which exacerbates the land loss crisis faced across coastal Louisiana. While Louisiana continues to draw on lessons learned from other states and nations engaged in reducing emissions, we face unique challenges, circumstances, and opportunities that can only be addressed by those who know our state best.

The Louisiana Climate Initiatives Task Force aims to address the root cause of climate change, such as greenhouse gas emissions, while simultaneously preparing Louisiana to adapt to a future of increased sea levels and higher global temperatures.

Since that time, efforts of the task force have positioned Louisiana as an innovative thought leader in adapting to climate change and addressing greenhouse gas emissions by bringing all stakeholders to the table to guide decision-making. In January of 2022, the task force unanimously approved Louisiana's first Climate Action Plan, the first-ever across the Gulf South.

Louisiana's Climate Action Plan contains a balanced set of recommendations to limit the severity of climate change while positioning the state to maintain its economic competitiveness in a low-carbon future. The science-based plan achieves the Governor's goals of reaching net zero greenhouse gas (GHG) emissions by 2050. This puts the state in line with pledges made under the Paris Agreement by the federal government, 25 other states, and hundreds of companies in the private sector. The Louisiana Climate Action Plan contains 28 strategies and 84 specific actions to reduce GHG emissions across the entire state economy. It was developed through a bottom-up approach over a 15-month process that included over 49 public meetings.

Gov. John Bel Edwards attends a Climate Initiatives Task Force meeting

ATCHAFALAYA RIVER BASIN RESTORATION & ENHANCEMENT TASK FORCE

The Atchafalaya Basin is the largest active swamp-river basin in the United States and serves as one of its most ecologically diverse landscapes. For Louisiana, the Atchafalaya Basin is an important valve for flood control, and its Port of Morgan City is a major economic driver of commerce in South Central Louisiana. Culturally, the basin's picturesque landscape is one of the most recognizable regions in the state.

Over the years, the natural flow regime of the Atchafalaya River has caused sedimentation and water quality issues that threaten the ecosystem, navigation, flood control, and communities that rely on the basin's natural and cultural resources. The importance of this vital and vibrant region not been fully appreciated, as Gov. Edwards noted, "It is past time that it receive more focused attention here in Louisiana and nationally."

To address this, Gov. John Bel Edwards established the Atchafalaya River Basin Restoration and Enhancement (ARBRE) Task Force in late 2020 to identify the challenges facing the Atchafalaya Basin and provide recommendations to CPRA on projects and initiatives to combat them.

The ARBRE Task Force held a series of public meetings to inform its initial report, released in 2021, detailing 12 recommendations for management of the Atchafalaya Basin. This draft report will be refined in 2022, and is anticipated for review and approval by the CPRA board, and implemented in the coming years.

88	Jefferson Parish Lakefront Shoreline Protection	CON	\$2,000,000

TABLE 12: PROJECTED THREE-YEAR REVENUES (FY 2023 - 2025)

Revenue Source	FY 2023	FY 2024	FY 2025	Program Total (FY 2023 - 2025)
CPR Trust Fund Annual Revenue ^{1,2}	\$13,400,000	\$14,000,000	\$14,500,000	\$41,900,000
CPR Trust Fund Carried Forward	\$28,408,407	\$28,475,039	\$17,826,137	\$74,709,583
CWPPRA Federal Funds ³	\$64,790,044	\$46,100,354	\$50,968,550	\$161,858,948
GOMESA ⁴	\$77,000,000	\$90,000,000	\$90,000,000	\$257,000,000
GOMESA Carried Forward ⁵	\$58,686,625	\$112,783,706	TBD	\$171,470,331
DOTD Interagency Transfer ¹	\$4,000,000	\$4,000,000	\$4,000,000	\$12,000,000
Surplus Funding (Previously Appropriated) ⁶	\$212,990,090	\$99,982,287	\$50,665,000	\$363,637,377
Community Development Block Grants	\$3,250,000	\$2,500,000	\$2,500,000	\$8,250,000
Capital Outlay Funding (Previously Appropriated)	\$30,272,074	\$22,591,787	\$1,666	\$52,865,527
One-Time Legislative Appropriation Funding (Previously Appropriated)	\$3,350,000	\$0	\$0	\$3,350,000
NRDA Revenues (<i>Deepwater Horizon</i>)	\$569,276,458	\$697,761,264	\$553,526,802	\$1,820,564,523
NFWF Revenues (<i>Deepwater Horizon</i>)	\$46,309,802	\$23,900,736	\$114,981,199	\$185,191,737
RESTORE Revenues (<i>Deepwater Horizon</i>)	\$172,236,016	\$155,577,610	\$128,627,858	\$456,441,484
NRDA Revenues (<i>Non-Deepwater Horizon</i>) ⁷	\$7,256,449	\$160,616	\$0	\$7,417,065
NFWF Revenues (<i>Non-Deepwater Horizon</i>) ⁸	\$1,736,093	\$224,546	\$0	\$1,960,639
LDNR Mitigation Funds ⁹	\$500,000	\$500,000	\$500,000	\$1,500,000
LDNR Beneficial Use Funds ⁹	\$500,000	\$500,000	\$500,000	\$1,500,000
Office of State Parks Interagency Transfer Funds ¹⁰	\$805,000	\$345,000	\$0	\$1,150,000
OM&M Federal Funds ¹¹	\$29,580,535	\$19,502,029	\$16,096,694	\$65,179,258
OM&M FEMA Funds	\$5,058,220	\$2,219,260	\$0	\$7,277,480
LOSCO Funding ¹²	\$206,000	\$186,000	\$186,000	\$578,000
BOEM Funding ¹³	\$1,430,000	\$1,076,000	\$1,076,000	\$3,582,000
FEMA FMA Funding ¹⁴	\$100,000	\$0	\$0	\$100,000
LDNR/LOSCO/LDWF Funding ¹⁵	\$1,168,000	\$0	\$0	\$1,168,000
US Climate Alliance Grant Funding ¹⁶	\$60,000	\$0	\$0	\$60,000
Project Billing ¹⁷	\$22,031,503	\$22,000,000	\$22,000,000	\$66,031,503
Total Projected Revenue¹⁸	\$1,354,401,316	\$1,344,386,234	\$1,067,955,905	\$3,766,743,455

1. Annually recurring revenue source to be spent in accordance with the Louisiana Constitution, specifically State Law Section 214.5.4(E) and the provisions within paragraph (3).
 2. Estimate tied to mineral revenue.
 3. Represents anticipated Federal reimbursement for CWPPRA projects led by CPRA in which the State is initially incurring more than its 15% cost share during project implementation.
 4. GOMESA funds must be disbursed to the applicable states by the end of the federal fiscal year. FY 2023 GOMESA funds are anticipated to be received around April 2023 (4Q23).
 5. Represents carry-forward of unexpended funds from prior-year GOMESA payments.
 6. Includes funding from previously appropriated budget surpluses (2007, 2008, 2009, 2018, and 2019) (see Table 20 for details).
 7. Funding to be utilized for the implementation of Long Point Bayou Marsh Creation (CS-0085).
 8. Funding to be utilized for Grand Bayou Ridge Restoration and Canal Backfilling (BA-0256), Northwest Little Lake Marsh Creation Increment 2 (BA-0260), and Orleans Landbridge Marsh Creation (PO-0191).
 9. Supplemental funding to augment construction of eligible projects (specific projects to be determined at a later date).
 10. Funding to be utilized for construction of Cypremort Point State Park Improvements (TV-0081).
 11. Represents anticipated Federal reimbursement for CWPPRA and WRDA OM&M activities led by CPRA in which the State is initially incurring more than its cost share during project implementation.
 12. Represents reimbursement of expenditures for CPRA (non-DWH) oil spill response activities.
 13. Funding will be utilized for Regional Geology and Sediment Management tasks (see Table 14).
 14. Funding would be used to support planning activities for the FEMA Flood Mitigation Assistance Program and is subject to grant approval.
 15. Funding to be utilized for construction of South Pass Bird Island (MR-0172).
 16. Funding (if procured) to be utilized for continuation of a RESTORE-funded study to determine the net ecosystem carbon balance of coastal habitats.
 17. Represents salary and other work-in-kind reimbursements for work performed on projects in funding programs listed in the table above.
 18. New project opportunities may arise if additional funds become available after the approval of the Annual Plan, and conditions may necessitate reprogramming of existing funds to address changes on the ground. If necessary, reprogramming of existing and new funds would occur, with approval from the CPRA, to ensure that limited coastal program funds are allocated in accordance with Master Plan objectives. CPRA has been granted authority to reprogram dollars from approved funding streams and to reallocate dollars to best meet new opportunities or needs. Such flexibility allows the coastal program to respond effectively to unforeseen events that take place outside the legislatively mandated planning cycle.

TABLE 13: PROJECTED THREE-YEAR EXPENDITURES¹ (FY 2023 - 2025)

Program/Funding Source	FY 2023	FY 2024	FY 2025	Program Total (FY 2023 - 2025)
CWPPRA State Expenditures (not including Surplus expenditures) ²	\$15,417,719	\$19,118,760	\$9,031,450	\$43,567,930
CWPPRA Federal Expenditures ³	\$64,790,044	\$46,100,354	\$50,968,550	\$161,858,948
GOMESA Expenditures	\$135,686,625	\$202,783,706	\$90,000,000	\$428,470,331
WRDA Project Expenditures (not including Surplus expenditures)	\$0	\$0	\$0	\$0
Surplus Project and Program Expenditures ⁴	\$212,990,090	\$99,982,287	\$50,665,000	\$363,637,377
Community Development Block Grants	\$3,250,000	\$2,500,000	\$2,500,000	\$8,250,000
Capital Outlay Project Expenditures	\$30,272,074	\$22,591,787	\$1,666	\$52,865,527
One-Time Legislative Appropriation Project Expenditures	\$3,350,000	\$0	\$0	\$3,350,000
State-Only Project Expenditures (Non-Surplus)	\$3,224,371	\$2,721,064	\$2,374,368	\$8,319,803
NRDA Expenditures (<i>Deepwater Horizon</i>)	\$569,276,458	\$697,761,264	\$553,526,802	\$1,820,564,523
NFWF Expenditures (<i>Deepwater Horizon</i>) (not including Surplus Expenditures)	\$46,309,802	\$23,900,736	\$114,981,199	\$185,191,737
RESTORE Expenditures (<i>Deepwater Horizon</i>) (not including Surplus Expenditures)	\$172,236,016	\$155,577,610	\$128,627,858	\$456,441,484
NRDA Expenditures (Non- <i>Deepwater Horizon</i>) ⁵	\$7,256,449	\$160,616	\$0	\$7,417,065
NFWF Revenues (Non- <i>Deepwater Horizon</i>) ⁶	\$1,736,093	\$224,546	\$0	\$1,960,639
LDNR Mitigation Expenditures ⁷	\$500,000	\$500,000	\$500,000	\$1,500,000
LDNR Beneficial Use Expenditures ⁷	\$500,000	\$500,000	\$500,000	\$1,500,000
Office of State Parks Interagency Transfer Funds ⁸	\$805,000	\$345,000	\$0	\$1,150,000
OM&M- State Expenditures (not including Surplus or GOMESA expenditures)	\$13,749,300	\$8,234,445	\$7,629,051	\$29,612,796
OM&M- Federal Expenditures ⁹	\$29,580,535	\$19,502,029	\$16,096,694	\$65,179,258
OM&M- FEMA Expenditures	\$5,058,220	\$2,219,260	\$0	\$7,277,480
BOEM Expenditures ¹⁰	\$1,430,000	\$1,076,000	\$1,076,000	\$3,582,000
FEMA FMA Expenditures ¹¹	\$100,000	\$0	\$0	\$100,000
LDNR/LOSCO/LDWF Funding ¹²	\$1,168,000	\$0	\$0	\$1,168,000
US Climate Alliance Grant Funding ¹³	\$60,000	\$0	\$0	\$60,000
State Programmatic/Adaptive Management Expenditures (see Table 14)	\$3,700,000	\$5,776,000	\$5,776,000	\$15,252,000
Operating Costs (see Tables 14 and 15) ^{14,15}	\$31,954,521	\$32,810,769	\$33,701,267	\$98,466,557
Total Planned Expenditures¹⁶	\$1,354,401,316	\$1,344,386,234	\$1,067,955,905	\$3,766,743,455

1. Represents proposed expenditures provided that commensurate level of funding is received.
 2. Because CWPPRA projects compete for funding annually, CWPPRA expenditures as presented in Table 16 (which include projected expenditures for approved projects only) do not adequately capture likely CWPPRA expenditures in outlying years. The State's estimated CWPPRA expenditures for FY 2024 - FY 2025 are therefore based on prior years' expenditures.
 3. Represents anticipated Federal reimbursement for CWPPRA projects led by CPRA in which the State is initially incurring more than its 15% cost share during project implementation.
 4. Includes funding from previously appropriated budget surpluses (2007, 2008, 2009, 2018, and 2019) (see Table 20 for details).
 5. Funding to be utilized for the implementation of Long Point Bayou Marsh Creation (CS-0085).
 6. Funding to be utilized for the implementation of Grand Bayou Ridge Restoration and Canal Backfilling (BA-0256), Northwest Little Lake Marsh Creation Increment 2 (BA-0260), and Orleans Landbridge Marsh Creation (PO-0191).
 7. Supplemental funding to augment construction of eligible projects (specific projects to be determined at a later date).
 8. Funding to be utilized for construction of Cypremort Point State Park Improvements (TV-0081).
 9. Represents anticipated Federal reimbursement for CWPPRA and WRDA OM&M activities led by CPRA in which the State is initially incurring more than its cost share during project implementation.
 10. Funding will be utilized for Regional Geology and Sediment Management tasks (see Table 14).
 11. Funding would be used to support planning activities for the FEMA Flood Mitigation Assistance Program and is subject to grant approval.
 12. Funding to be utilized for construction of South Pass Bird Island (MR-0172).
 13. Funding (if procured) to be utilized for continuation of a RESTORE-funded study to determine the net ecosystem carbon balance of coastal habitats.
 14. In the event of a declared emergency, CPRA may need to expend Operating Costs in support of the State's disaster response efforts. Up to 75 percent of these expenditures would be reimbursable by FEMA.
 15. Operating Costs include Three-Year Operating Expenditures (see Table 15), Assistance to Levee Authorities (see Table 14), and Project Support (see Table 14).
 16. New project opportunities may arise if additional funds become available after the approval of the Annual Plan, and conditions may necessitate reprogramming of existing funds to address changes on the ground. If necessary, reprogramming of existing and new funds would occur, with approval from the CPRA, to ensure that limited coastal program funds are allocated in accordance with Master Plan objectives. CPRA has been granted authority to reprogram dollars from approved funding streams and to reallocate dollars to best meet new opportunities or needs. Such flexibility allows the coastal program to respond effectively to unforeseen events that take place outside the legislatively mandated planning cycle.

	Adjustment for Outlying Years³	N/A	N/A	\$58,671,173	\$58,671,173
	Total Expenditures	\$80,207,763	\$65,219,114	\$60,000,000	\$205,426,878
	Federal Expenditures (see Note 1)	\$64,790,044	\$46,100,354	\$50,968,550	\$161,858,948
	Trust Fund Expenditures	\$15,417,719	\$19,118,760	\$9,031,450	\$43,567,930
<p>1. Project is being led by CPRA; projected expenditures include Federal funds; any State expenditures beyond its 15% cost share will be reimbursed by the Federal partner.</p> <p>2. Includes funding previously allocated to PO-0133 (both projects will be constructed under PO-0075).</p> <p>3. Because CWPPRA projects compete for funding annually, CWPPRA expenditures as presented in Table 16 (which include projected expenditures for approved projects only) do not adequately capture likely CWPPRA expenditures in outlying years. The State's estimated CWPPRA expenditures for FY 2024 - FY 2025 are therefore based on prior years' expenditures.</p>					

TABLE 17: LOUISIANA WRDA PROJECTED EXPENDITURES

<ol style="list-style-type: none"> 1. Project receiving supplemental funding from Surplus funds (see Table 20). 2. Project to be implemented under the Atchafalaya Basin program. 3. Expenditures do not include the \$12.5 million in Priority 5 Capital Outlay Funding that TLCD has requested to be moved to Priority 1. Proposed transfer of this funding to Priority 1, which has been recommended by Governor Edwards and noted by the State Bond Commission, is subject to legislative approval in House Bill 2 (HB2) during the 2020 session. The funding would be available for TLCD to expend on TE-0064 upon approval of HB2. 4. Project is currently 100% Federal. Projected expenditures are for staff coordination with Federal project team members. 5. Represents staff salaries for projects funded for implementation with Surplus dollars.

Total CWPPRA O&M Expenditures		\$20,373,117	\$10,611,354	\$5,727,715	\$36,712,186
Federal CWPPRA O&M Expenditures		\$17,317,149	\$9,019,651	\$4,868,558	\$31,205,358
State CWPPRA O&M Expenditures		\$3,055,967	\$1,591,703	\$859,157	\$5,506,828

1. Table shows all approved CWPPRA projects. Demonstration and vegetative planting projects are not shown as they have no O&M budgets. Other projects without O&M budgets have "None" entered in the budget columns. Projects not scheduled to complete within a given year have "Not Constructed" entered in the budget column(s).
 2. State share is based on CWPPRA cost share of 85% Federal/15% State except for PPL 5-6 projects, which have a 90% Federal/10% State cost share.
 3. Projects that the USACE is responsible for O&M are indicated by (USACE) after the project number.

TABLE 25: O&M PROJECTED EXPENDITURES FOR CWPRA PROJECTS WITHOUT FEDERAL COST SHARE

Project ID	Project Name	FY 2023	FY 2024	FY 2025	Program Total (FY 2023 - 2025)
TE-0020	Isles Dernieres Restoration East Island	\$6,624	\$7,832	\$7,832	\$22,288
TE-0024	Isles Dernieres Restoration Trinity Island	\$6,624	\$7,832	\$7,832	\$22,288
TE-0025	East Timbalier Island Sediment Restoration, Phase 1	\$6,624	\$4,832	\$4,832	\$16,288
TE-0027	Whiskey Island Restoration	\$6,624	\$7,832	\$7,832	\$22,288
TE-0030	East Timbalier Island Sediment Restoration, Phase 2	\$7,832	\$4,832	\$4,832	\$17,496
TV-0017	Lake Portage Land Bridge	\$2,416	\$2,416	\$0	\$4,832
Total Expenditures		\$36,744	\$35,576	\$33,160	\$105,480

TABLE 26: PROJECTED EXPENDITURES FOR O&M OF WRDA PROJECTS

Project ID	Project Name	FY 2023	FY 2024	FY 2025	Program Total (FY 2023 - 2025)
BA-0001	Davis Pond Freshwater Diversion	\$2,365,968	\$1,565,968	\$1,565,968	\$5,497,904
BS-0008	Caernarvon Freshwater Diversion	\$1,601,968	\$153,218	\$154,468	\$1,909,654
Total Expenditures (GOMESA)¹		\$3,967,936	\$1,719,186	\$1,720,436	\$7,407,558

1. O&M expenditures of WRDA projects are subject to a 75% federal/25% state cost share. At present, CPRA is funding its 25% cost share of O&M costs with GOMESA funds, and will seek reimbursement from the USACE for the 75% federal match.

1. Red font denotes projected expenditures for which funding has not yet been procured.
 2. Project currently anticipated to be authorized for implementation in FY 2023 (subject to TIG approval).
 3. Funding to be utilized for implementation of Elmers Island Access (BA-0208) and Lake Charles Science and Education Center (CS-0083)
 4. Funding to be utilized for implementation of WHARF Phase 1 (BA-02034), Louisiana Wetlands Education Center (BA-0236), Des Allemands Boat Launch (BA-0237), St. Bernard State Park Improvements (BS-0036), and Chitimacha Boat Launch (TV-0084).
 5. Expenditures represent matching funds for project implementation to eligible parishes identified in 33 U.S.C. §1321(t)(1)(D)(II) provided that the project constitutes an eligible activity under 31 C.F.R. §§ 34.201 and 34.203 and meets the purposes identified in La. R.S. 49:214.5.4(G) & (I).

TABLE 29: GOMESA PROJECTED EXPENDITURES

Project ID	Project Name	FY 2023	FY 2024	FY 2025	Program Total (FY 2023 - 2025)
BA-0075-2	Rosethorne Basin Phase 1 & 2 (LAILD)	\$11,000,000	\$0	\$0	\$11,000,000
BA-0219	Davis Pond Upper Barataria Risk Reduction (LBLD)	\$3,000,000	\$2,000,000	\$0	\$5,000,000

FY 2023 Atchafalaya Basin Annual Plan

This public document was published at a total cost of \$7,895.80. 400 copies of this public document were published in this second printing at a cost of \$7,895.80. The total cost of all printings of this document, including reprints is \$7,895.80. This document was published by the Coastal Protection and Restoration Authority to inventory project, presents implementation schedules for these projects, and identify funding schedules and budgets for Fiscal Year 2023 under authority of Act 523 of the 2009 Regular Legislative Session, amended by Act 604. This material was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

This document was published by OTS-Production Support Services, 627 North 4th Street, Baton Rouge, LA 70802 for the Coastal Protection and Restoration Authority of Louisiana as mandated by the Legislature. This material was printed in accordance with standards for printing by state agencies established in R.S. 43:31. Printing of this material was purchased in accordance with the provisions of Title 43 of the Louisiana Revised Statutes.

Coastal Protection and Restoration Authority, 2020. Annual Plan Fiscal Year 2023: Integrated Ecosystem Restoration and Hurricane Protection in Coastal Louisiana. Coastal Protection and Restoration Authority of Louisiana, Baton Rouge, LA.

@LOUISIANACPRA

WWW.COASTAL.LA.GOV

Louisiana Coastal Protection and Restoration Authority is the single state entity with authority to develop, articulate, implement, and enforce a comprehensive coastal Master Plan of unified vision, to reduce tropical storm surge flood impact, to restore our bountiful natural resources, to build land to protect our nation's critical energy infrastructure, and to secure Louisiana's coast now and for future generations.
