

INSULATION FOR EXTREME WEATHER

Your *Spartan* is extremely well insulated with Thermofoil Blanket. Thermofoil Blanket is reflective and it creates a barrier to contain heat within its walls. The inner walls of the *Spartan* are completely covered, floor to top rail, with Thermofoil Blanket insulation.

This creates a heat corral, trapping heat underneath the spa. Your plumbing stays warm and cozy and your water stays hot. If you need to do a repair, the Thermofoil walls can be pulled back for easy access and they are easily put back in place.
