Design and Mapping

Part I: Data Collection Tools

Field Instruments
Online Sources
GPS, Phone Apps
Drones
Phone Mapping

Field Instruments

Clinometer*

- Measures slope/grade
- Key for assessing, planning, and flagging trails

**Don't trust a trail builder/planner who doesn't use a clino!*

Field Instruments

Digital Angle Gauge, Tape Measure

- Great for Technical Trail Features (TTFs)

Field Instruments

Laser Rangefinder, Handheld GPS

GPS and Phone Apps

- Decent accuracy
- Easy to use
- Phone apps have largely replaced handheld GPS units
- OnX, ArcGIS Collector, Survey123

Why do we use drones in our practices?

Different Reasons on Each Project

Generally:

- Reduce cost
- Expedite schedule
- Minimize footprint on sensitive habitats
- Increase data accuracy
- Increase contextual awareness
- Increase types of available data
- Increase use of collected data across disciplines

How do we use drones in our practices?

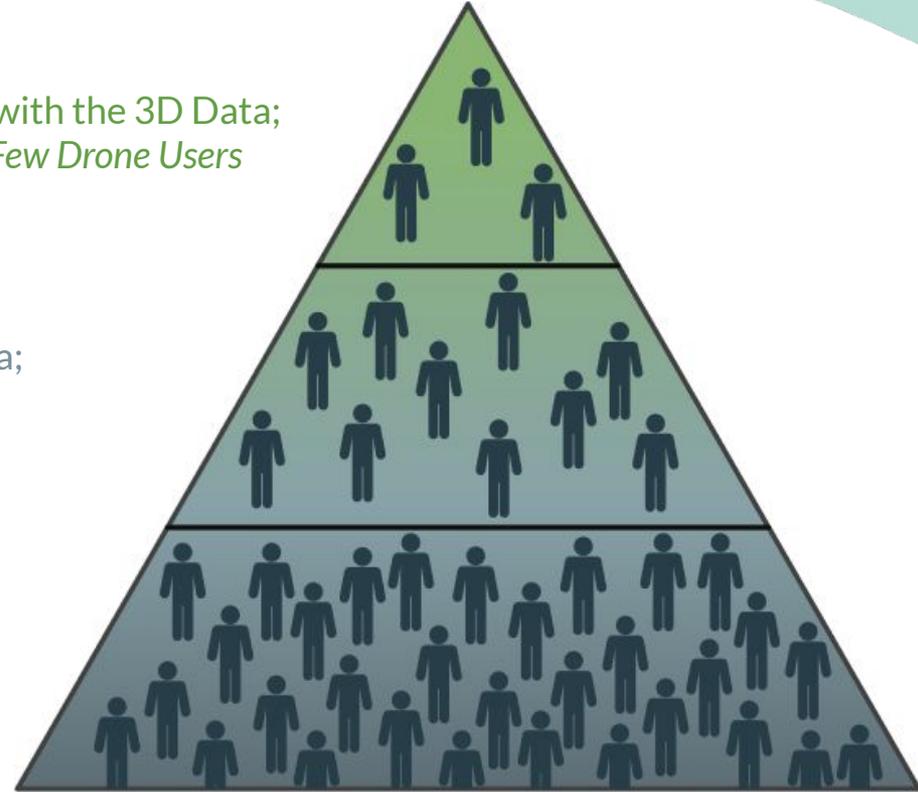

Types of Drone Users

3 Main Tiers/Categories

Working with the 3D Data;
Only a Few Drone Users

Collecting 3D Data;
Less Drone Users

Collecting Photos and Videos;
Many Drone Users

Tier 1: Photographs and Videos

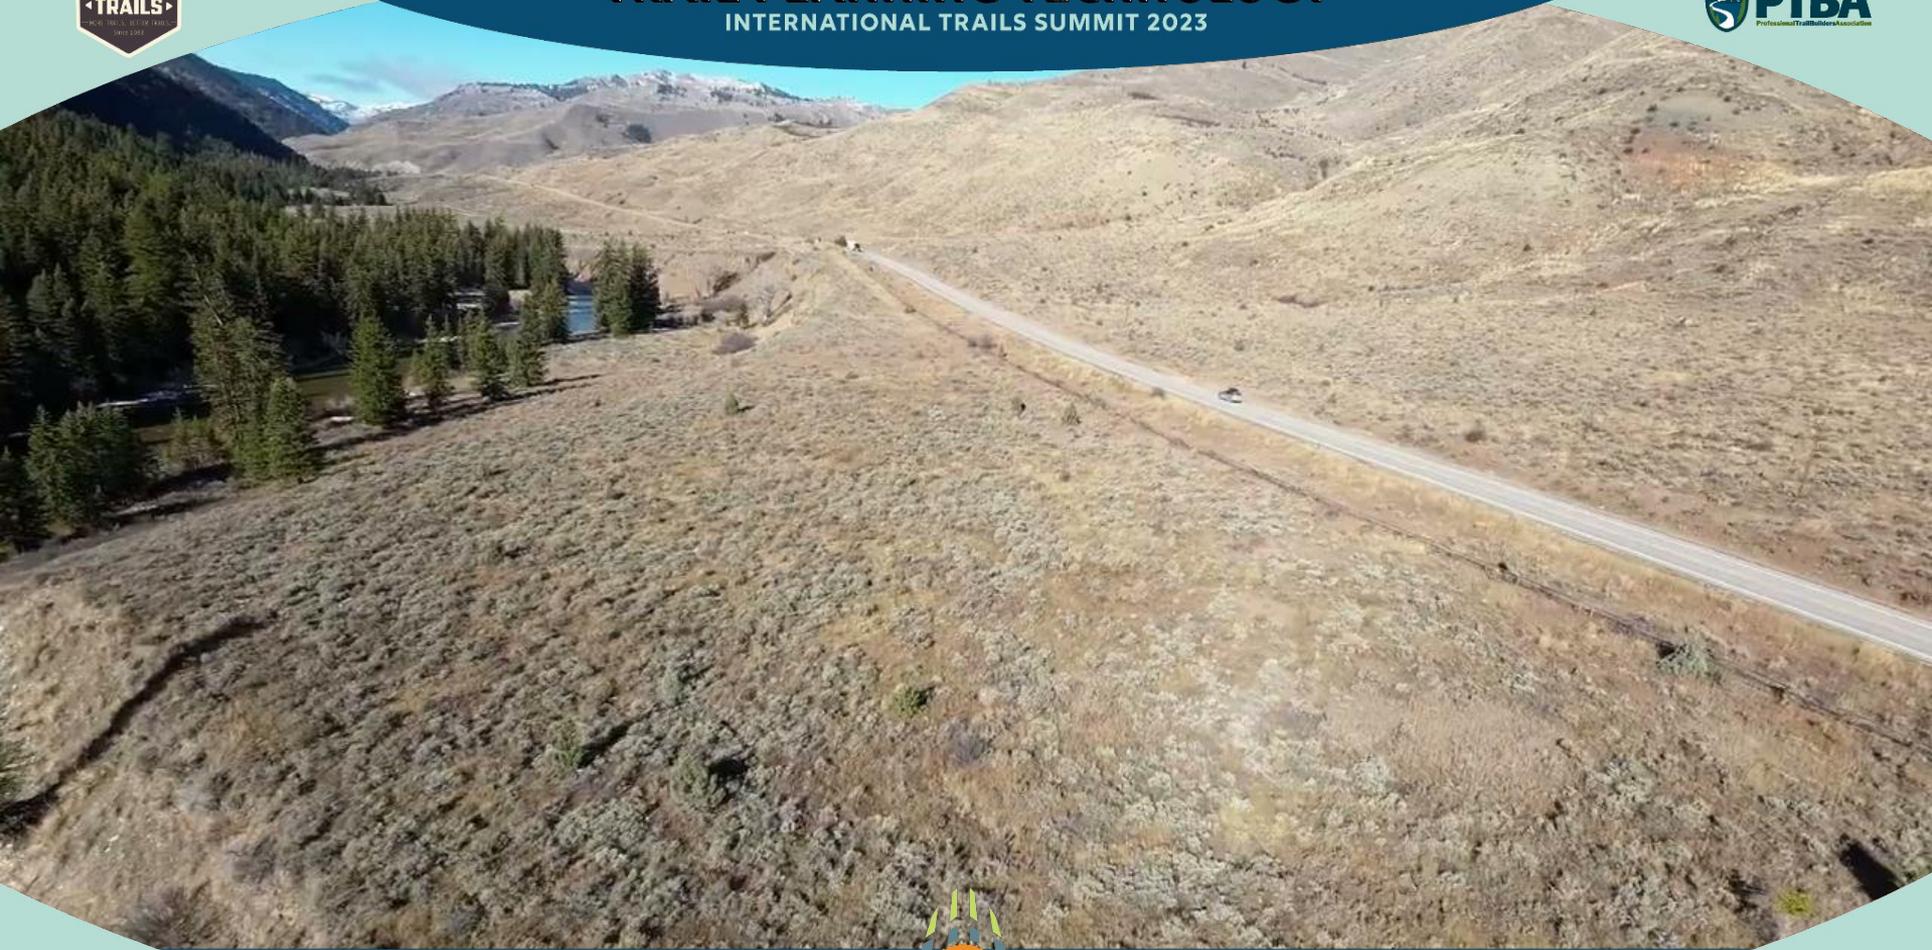

Most common and basic type of drone use

- Photos and videos are geotagged
- Cover a lot of ground quickly
- Gain a better overall perspective of the site

TRAIL PLANNING TECHNOLOGY

INTERNATIONAL TRAILS SUMMIT 2023

TONY BOONE
TRAILS

chinook
LANDSCAPE ARCHITECTURE

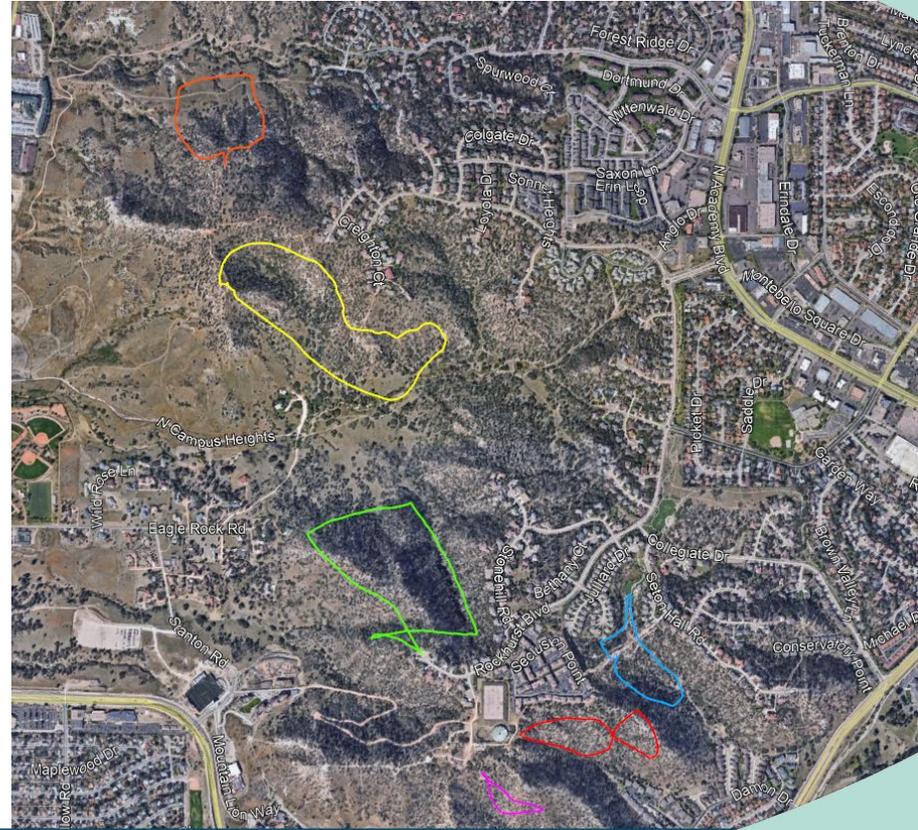

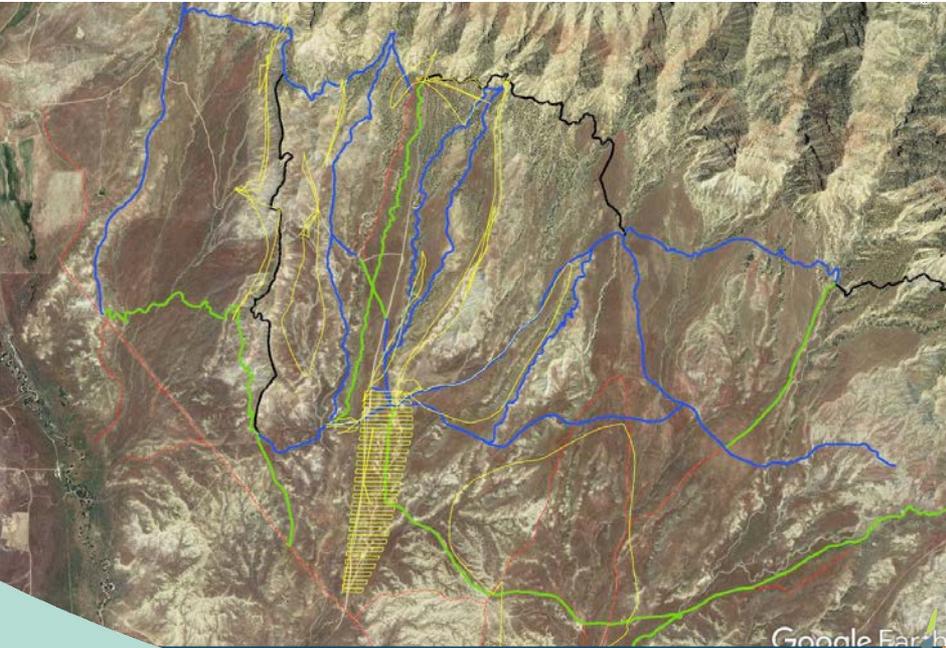

Tier 1: Photographs and Videos

Provides site inventory information both in field and in the office

Tier 1: Photographs and Videos

Geotagged videos and photos

Tier 2: Collecting 3D Data

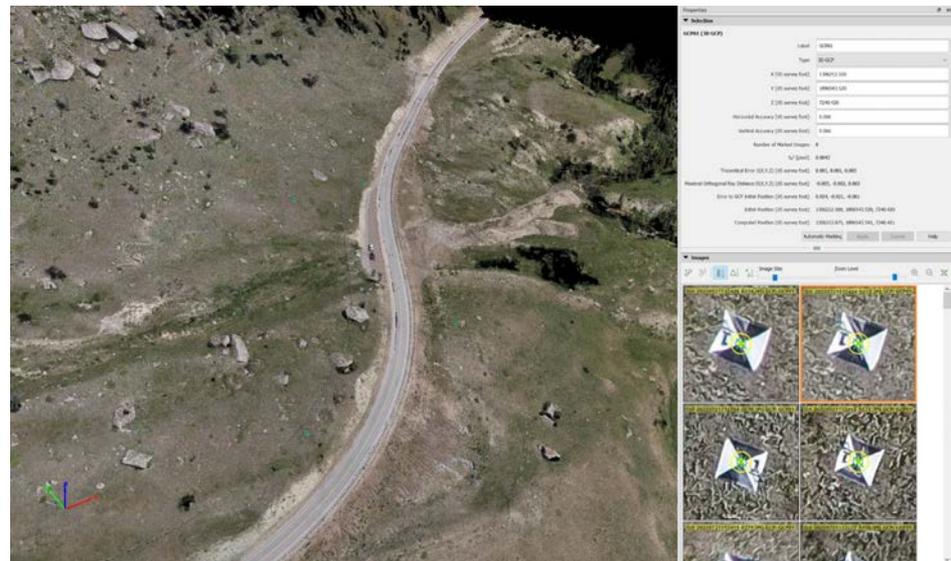

Less common, but quite a few 'drone people' do it

- Variety of methods
- Most use photogrammetry

Tier 2: Collecting 3D Data

Photogrammetry

- Uses a series of overlapping photographs
- Creates a 3D model (point cloud and mesh)
- Accuracy heavily relies on:
 - Photograph overlap
 - Angle of images (flight pattern)
 - Distance to subject
 - Ground Control Points (GCPs)

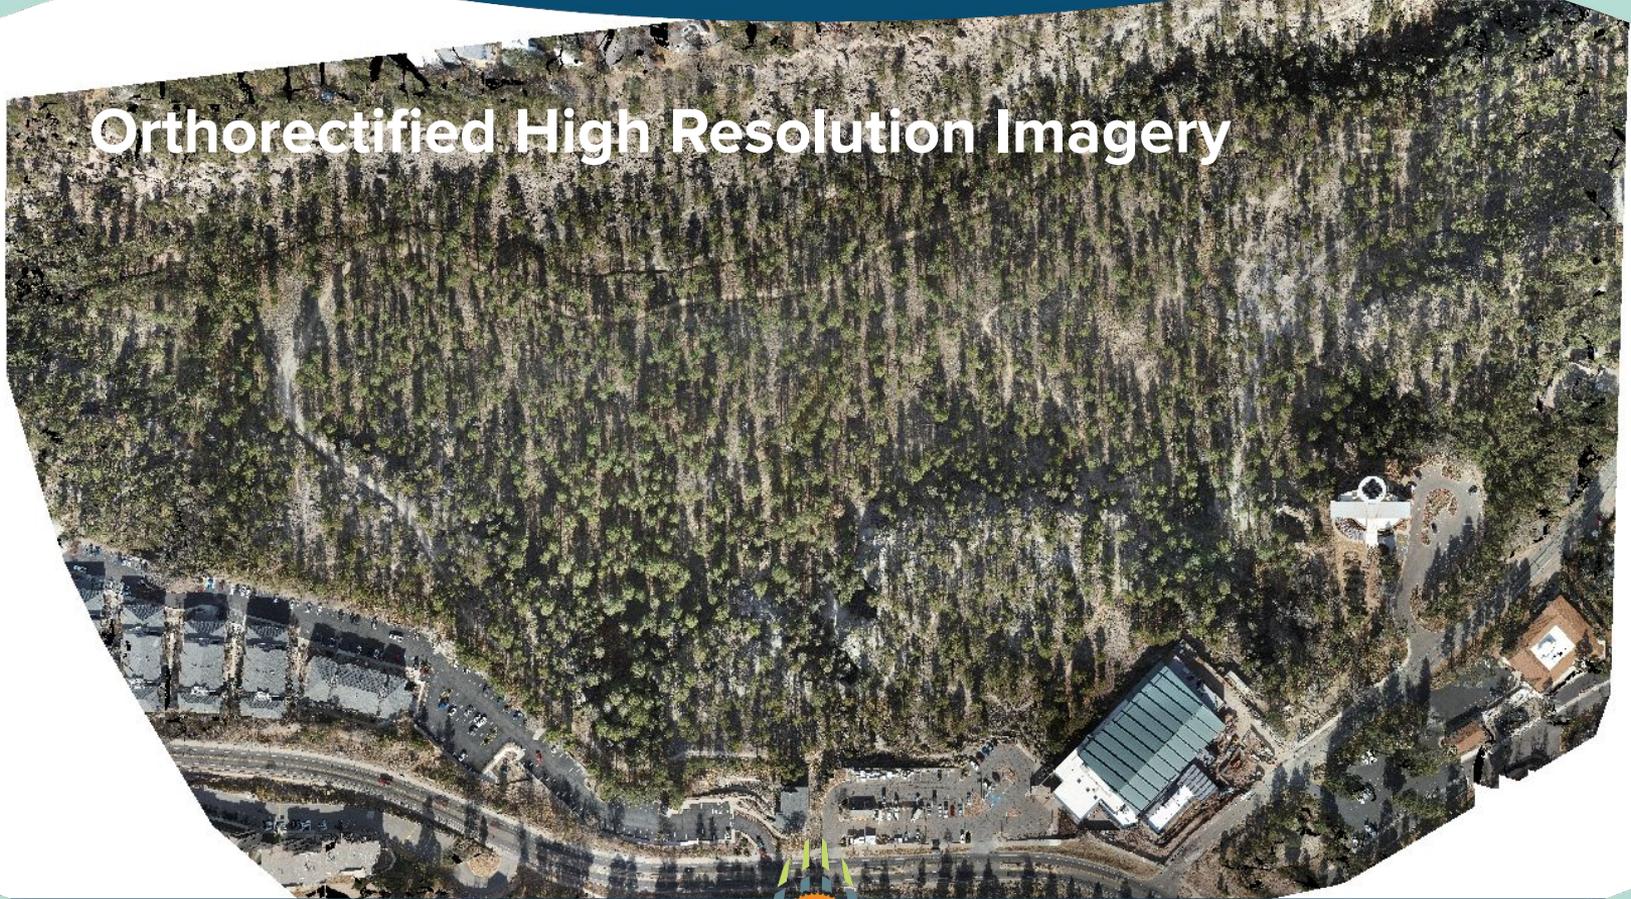

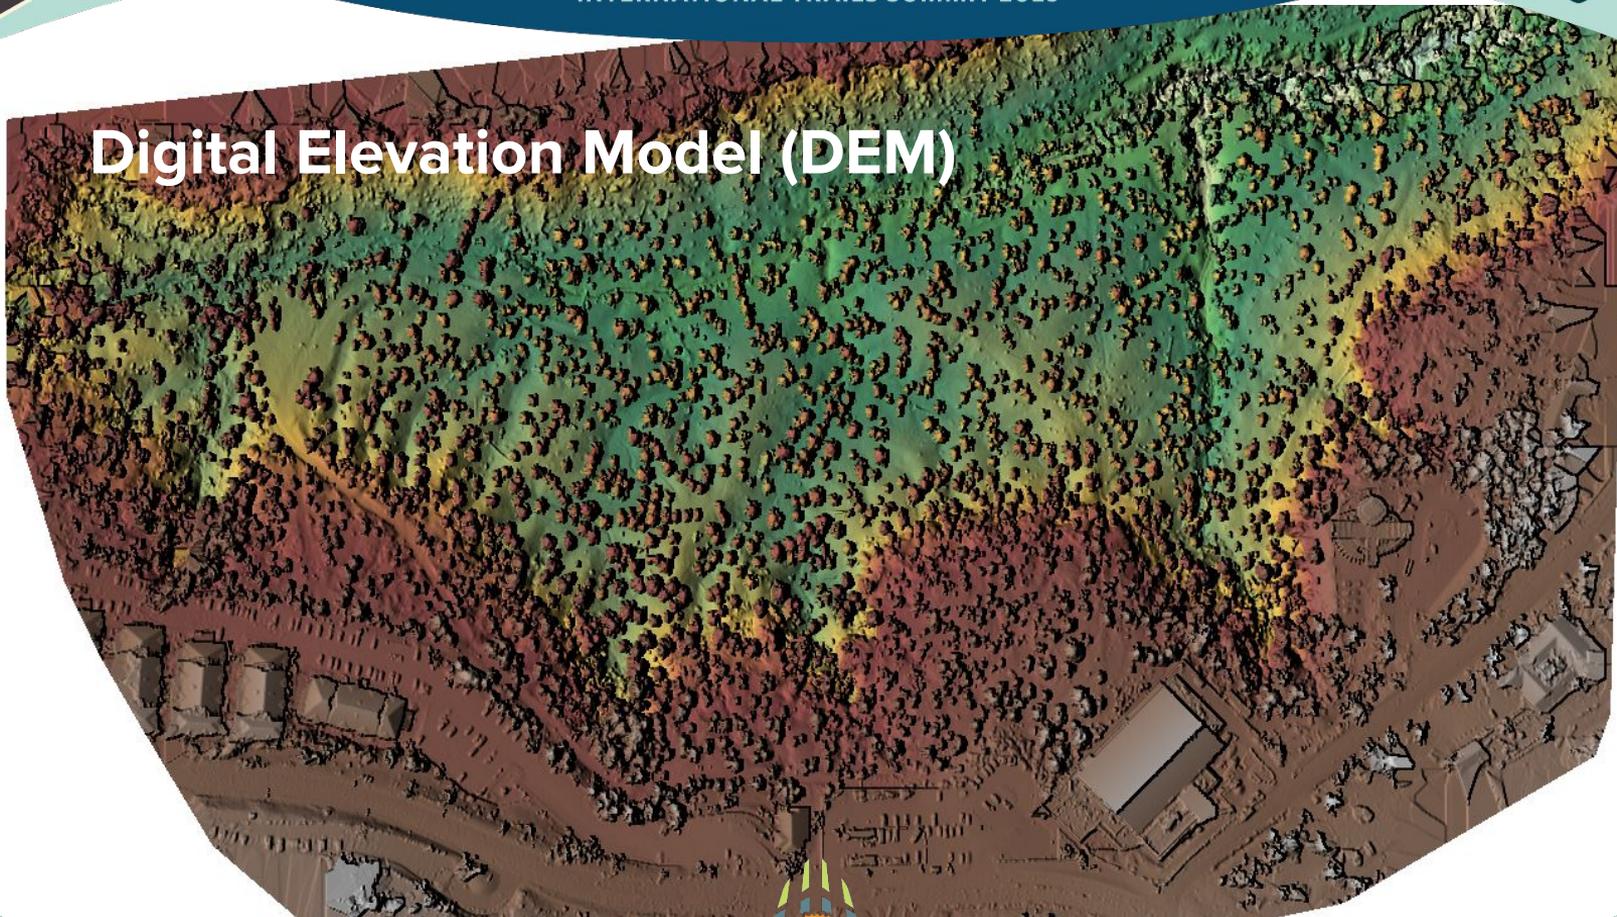

What can we get out of photogrammetry?

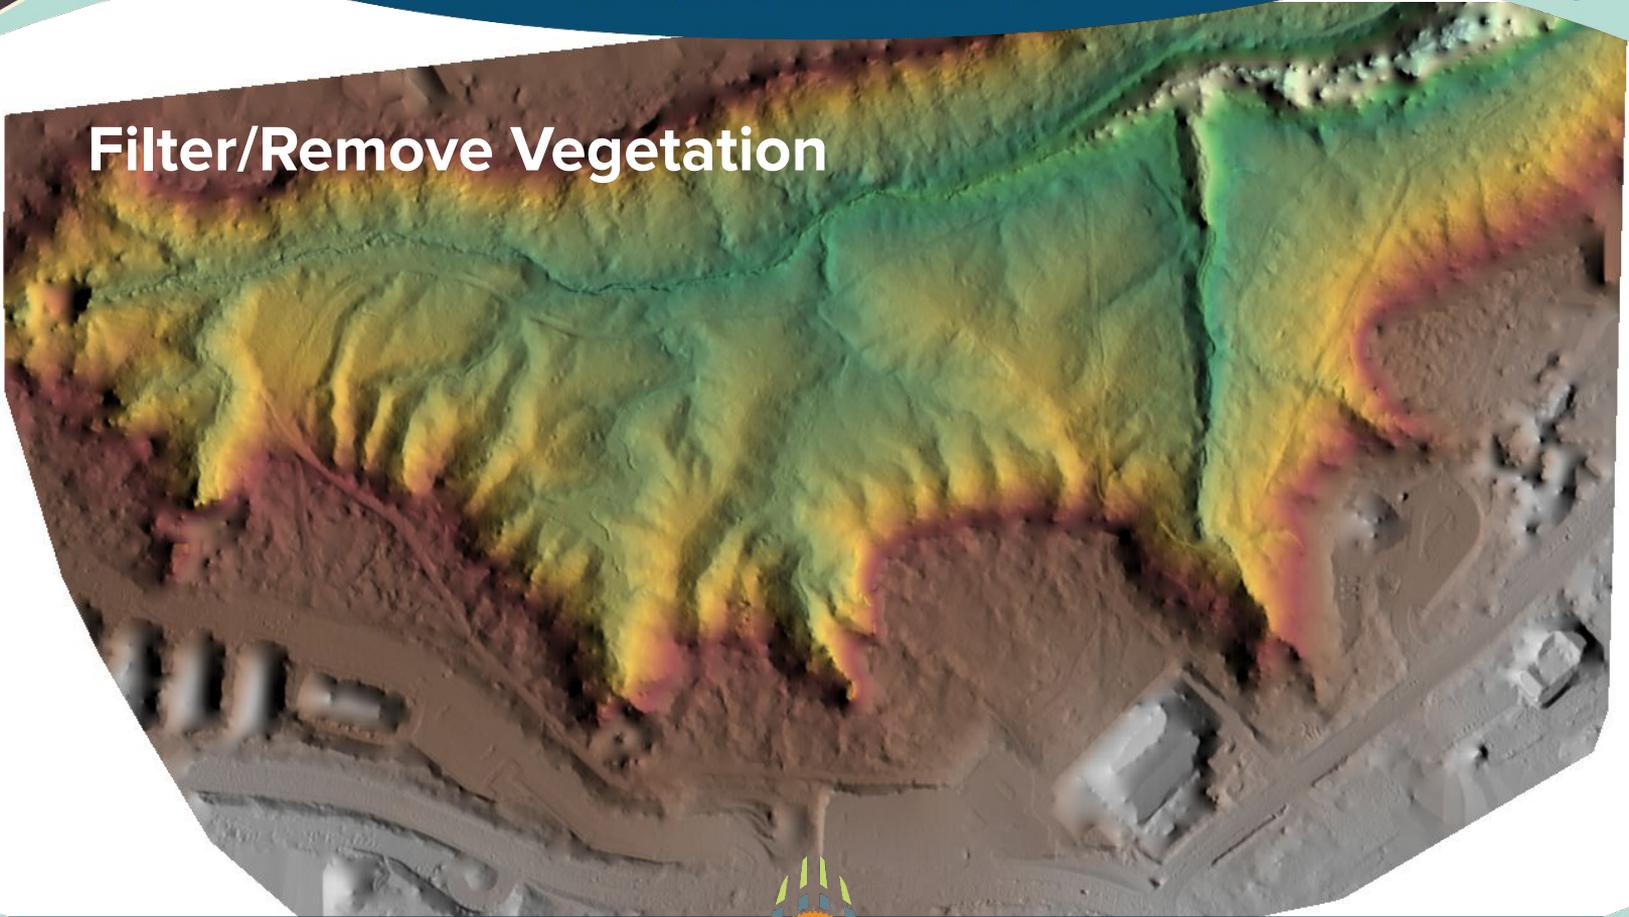

Orthorectified High Resolution Imagery

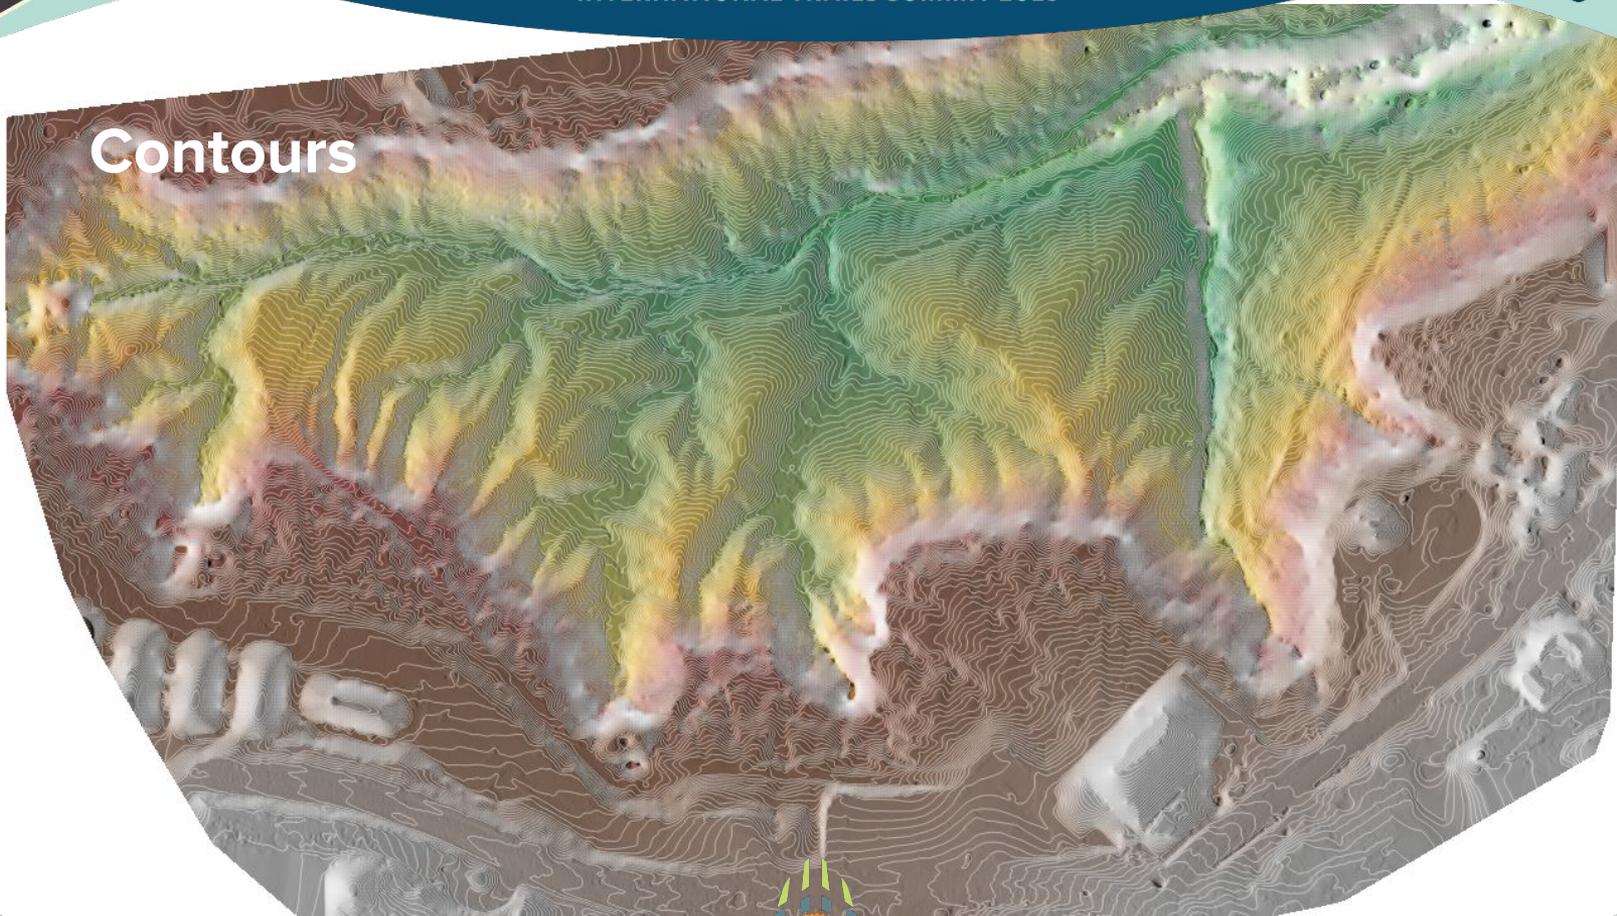

Digital Elevation Model (DEM)

Filter/Remove Vegetation

Contours

What does this process look like?

**TONY BOONE
TRAILS**

chinook
LANDSCAPE ARCHITECTURE

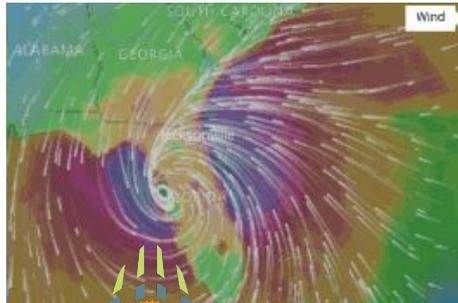

We'll look at these steps later in the pres!

Flight Planning

Crucial to success of the mission

- Flight areas
- Battery times
- Operator areas
- FAA regulations
- Weather
- GCPs
- Traffic control

Ground Control Points

Required for accurate results

Absolute accuracy
vs.
Relative accuracy

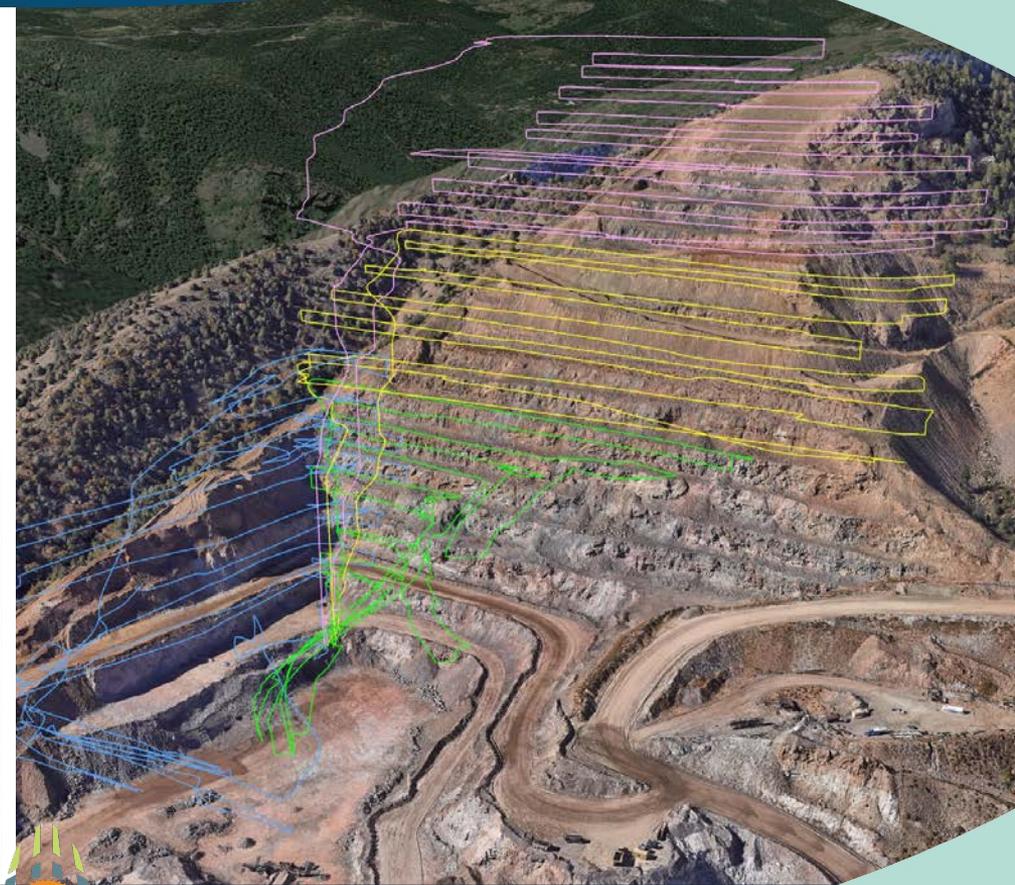

Flight Pattern Options

How much overlap?

How far from the subject?

What type of flight pattern/grid?

Nadir Flight Grid

Most common

Nadir = looking straight down

Horizontal, automated grid

Consistent height above ground (subject)

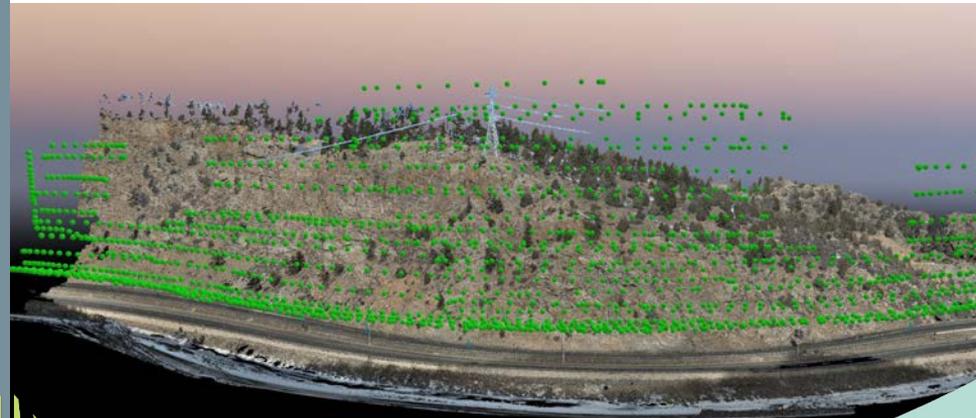

Oblique Flight Grid

Least common

Oblique = at an angle

Fly 'around' the subject

Requires move overlap

TTF Inspection and Routine Maintenance Schedule

Several trails at Lake Pueblo State Park include Technical Trail Features (TTFs), many of which are deteriorating wood and do not meet Best Management Practices. These aging TTFs urgently need to be removed and/or replaced. All TTFs, but especially wood ones, require regular documented maintenance inspections and repairs (based on industry standards) to effectively minimize injuries and manage risk. Understanding, inspecting, maintaining, and documenting the TTFs on the property is crucial to avoiding trail user injuries and property manager liability.

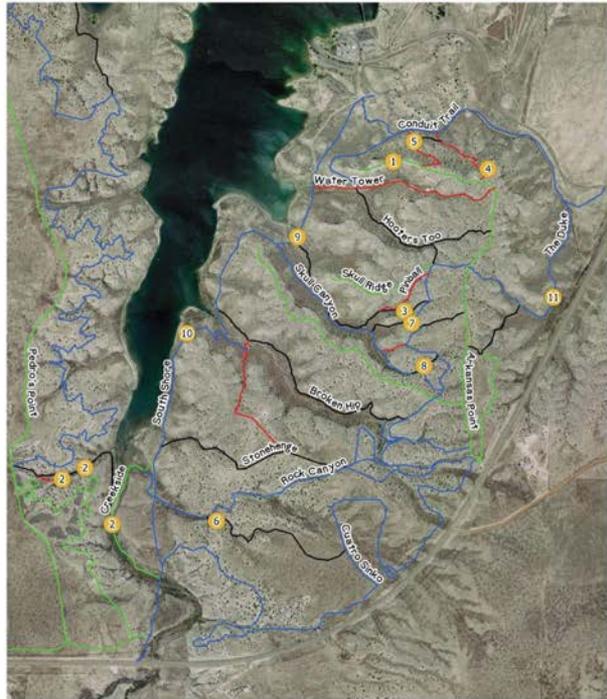

General Recommendation #3 is to develop a routine safety inspections and a maintenance schedule for all TTFs in the Park. International Mountain Bicycling Association (IMBA) guides and the Resort Municipality of Whistler's Trail Standards for Environmental and Technical Trail Features are both good resources for creating such a schedule. These documents are commonly accepted as Best Management Practices and are frequently used in both construction and litigation as industry standards.

chinook    

This report focuses on 13 trail issues that were identified by CPW as high priority areas. Some of these areas must be addressed together and have therefore been combined into single projects. A map of these locations can be seen on the facing page, as well as a table below. Numbers on the map/table refer to priorities of the issues as assigned by CPW. Duplicate numbers indicate separate issues that must be addressed together.

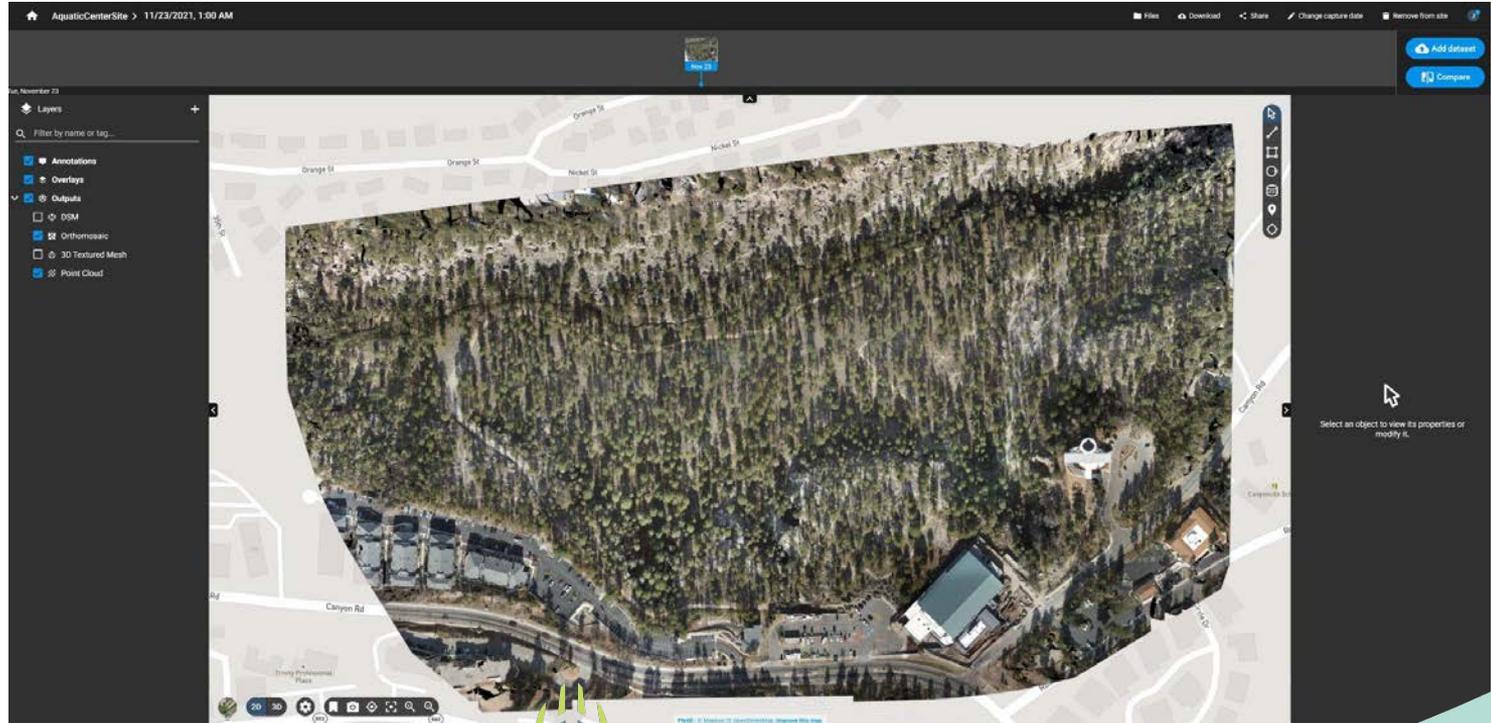

Trail Name	Issue(s)
1 Arkansas Point	Cultural resources conflict
2 Creekside/Waterfall/Log Drop	Riparian bird habitat conflict
3 Freeride	Aging wood TTFs
4 Steeptech	Aging wood structures and dangerous trail
5 Staircase	Steep and braided unsustainable trail sections
6 Keyhole	Aging wood TTF and new line opportunity
7 Rattlesnake	Aging wood TTF
8 Quickdraw	Aging wood TTF and multiple lines
9 South Shore Black Hill	Too steep hill and erosion issues
10 South Shore Big Hill	Too steep hill
11 Conduit	Erosion issues
