

“Plainting” the Trail

Painting with plants

Long term effort to plant native flowering understory plants that will naturalize over time along each side of trails to add color and texture and pollinator habitat along trails

Decorate wooded and open areas of parks and trail with native flowering shrubs, bulbs, and wildflower seeds.

Great for volunteer groups. It will take many years to cover the miles of trails and acres of open space and forests.

Perennials and plants that self-seed will ensure long-term results and cover more area over time
