

Dream Big

Report on Giving

Changing the course of lives and medicine, together.

2023 Edition

A Message from our President & CEO

Marie-Hélène Laramée

What a remarkable year 2023 has been! Though I've only been with the MUHC Foundation a few months, I can already see the deep commitment and dedication of our donors. Together, we raised over \$29 million in 2022–2023, helped the talented health care staff of the MUHC realize their big dreams and, ultimately, changed lives.

Health care philanthropy is close to my heart, and as I read through the pages of this report, I can see that it's close to yours as well. I look forward to working together in the coming year to fund innovation in cancer research, cardiology, infectious disease research, respiratory care, and new priorities like palliative care. I know, this time next year, we will be even closer to meeting our \$200 million goal and celebrating the success of the Dream Big Campaign together.

In this report, you will find stories of gifts, both large and small, that are having a big impact on health care in our city, our province, and around the world. As you read about what we've accomplished, I hope you feel the same pride that I do.

Thank you, to each and every donor to the MUHC Foundation, for your unshakeable support.

Marie-Hélène Laramée

Dream Big Campaign Co-Chairs' Message

Jean Charest

Suzanne Legge Orr

Marc Parent

Just over three years ago, we launched the Dream Big Campaign to change the course of lives and medicine. Today, we are incredibly proud of what dreaming big has helped us accomplish. Thanks to your support, our cardiologists are uncovering previously unknown causes of heart disease and personalizing treatments to save lives; our cancer researchers are delving into new techniques for precision oncology, such as the development of liquid biopsy, ensuring patients receive the right treatment at the right time; the DOvEE project is just a few years away from making testing and early detection of ovarian and endometrial cancers a standard part of every woman's care. These are just a few of dozens of incredible initiatives happening at the MUHC that were made possible by you. Together, we are improving the health of not only our community, but our world.

Today, the MUHC Foundation is proud to have raised \$170.7 million of our \$200 million goal in support of ground-breaking research and compassionate patient care at the MUHC. We're in the home stretch, and we have every confidence that, together, we will meet our goal and change the course of lives and medicine.

Thank you, from the bottom of our hearts, for your support.

Dream Big Co-chair

Cardiology

Fix Broken Hearts

When a heart attack strikes. When a heart valve isn't working. When the heart loses its rhythm. Every heartbeat forever after is a triumph. We are raising \$50 million so that in ten years, Montreal will have the lowest rate of hospitalization and fewest deaths due to heart disease in Canada.

A powerful visual from the For Every Heart campaign.

A campaign For Every Heart

During the 2023 holiday season, you came together in support of excellence in cardiology care through the MUHC Foundation's For Every Heart campaign. From Giving Tuesday to New Year's Day, you gave \$278,217 to help patients living with heart conditions receive the best care possible. Thanks to an incredible matching gift from the Morris and Bella Fainman Family Foundation, a grand total of \$556,434 was raised.

Gifts to For Every Heart enabled the purchase of several important pieces of equipment:

- Hand-held echo machines – These portable ultrasounds allow for rapid diagnosis while reducing wait times. Your support purchased 5 echo machines, enough to diagnose 2,000 patients every year.
- Cardiac laser – This minimally-invasive tool is the future of heart surgery. It can clear blockages from the heart's arteries using a laser, ensuring fewer individuals suffer heart attacks.
- Intracardiac imaging system – This imaging technology can see into the heart and perform interventions that only a few years ago would require open-heart surgery.

Together, your gifts had a vast impact on cardiac care at the MUHC. Thank you.

Rising Star Program brings top talent to Montreal

In 2023, the MUHC Foundation launched the Rising Star Program to provide transformative funding to promising early-career physician-scientists. The new program is bringing even more world-class talent to Montreal, helping bolster the MUHC's global reputation for excellence. The program is designed to provide brilliant individuals with the resources they need for their careers to flourish. Recipients are awarded \$300,000 to kick-start their research, as well as training and mentorship from Montreal's top physician-scientists.

The inaugural Rising Star is cardiologist Dr. Patrick Lawler. At the MUHC, he is leading innovative clinical research to better understand how infections can increase the risk of heart attack, and vice versa. Dr. Lawler's work will improve treatment for patients experiencing one or both of these life-threatening events.

Dr. Lawler was honoured at the MUHC Foundation's Rising Star in Medicine Gala on May 11, 2023, a glitzy event recognizing the achievements of the MUHC's top physicians.

Dr. Patrick Lawler is the first recipient of the Rising Star Award.

The Rising Star in Medicine Gala 2023

Signature event

MUHC's Got Talent raises \$420K

The MUHC Foundation's MUHC's Got Talent was a night to remember with 10 fun-filled and heartfelt performances by members of the MUHC community. The storied MTELUS theatre was packed with supporters as each performer gave their all in front of celebrity judges Catherine Verdon-Diamond, Jason Rockman and Mitsou, all in support of causes at the McGill University Health Centre.

The show featured a wide range of musical styles. The Pillars brought together nurses from across the MUHC for their very own rendition of "Alors on danse" by Stromae. Heavy metal band Uriel rocked the stage with a high energy performance and Fatima Zahra Haouzi had every audience member rapt with her beautiful classical guitar. The winners are:

- First prize - \$10,000 – Billie du Page for rare and genetic disease research
- Second prize - \$6,000 – À la Carte for the revitalization of the Lachine Hospital
- Third prize - \$4,000 – The Pillars for training for the MUHC's talented nurses
- Fan Favourite – \$15,000 – The Pillars
- Fundraising Champion - \$15,000 – Fatima Zahra Haouzi for cancer research

At the end of the night, 5 winners were crowned and \$420,000 was raised thanks to your generosity. Thank you to everyone who voted, donated and attended!

L-R: Marie-Hélène Laramée, Dr. Lucie Opatrny, Maria Arvanitis, Catherine Verdon-Diamond, Mitsou, Jason Rockman

A night of music for a good cause

Cancer

End Cancer

Your mother. Your sister. Your grandfather. Your best friend. You. Not one person is untouched by cancer. In 2018, it took the lives of 82,000 Canadians. We have a plan to end cancer: we will catch it early. Understand it down to its genetics. Discover its weaknesses. We are raising \$35 million to end cancer.

The 2023 World Cancer Day campaign ambassadors.

World Cancer Day campaign raises \$91k

On February 4, 2023, supporters like you took action to create a world where fewer loved ones are lost to cancer.

On World Cancer Day, six patients and former patients of the MUHC shared their cancer journeys—their stories of hope, love, courage, uncertainty and survival—to inspire donations in support of ground-breaking cancer research. In total, the campaign raised \$91,384 to support research and care for breast, kidney, throat, bladder and ovarian cancer.

The MUHC Foundation is grateful to Fondation Emmanuelle Gattuso for matching all gifts to kidney cancer up to \$100,000 and the Tino and Carmela Carrara Family Foundation for matching all gifts to bladder cancer up to \$100,000.

When you hear the word cancer, you imagine the worst, but there was always hope. Even though cancer takes something away from you, I never lost that.

—Suzanne Sauvage, cancer survivor and World Cancer Day ambassador

DOvEE

Stop the Silent Killer

Ovarian and endometrial cancers are silent killers, seldom presenting symptoms until it is too late. The sooner these cancers are detected, the more likely they are to be survivable. Gynecologic oncologist Dr. Lucy Gilbert has the answer: the DOvEEgene test. As routine as a pap smear, this test can detect cancer before it becomes a death sentence.

Justine Frangouli-Argyris, President of the Lyceum of Greek Women of Montreal, speaks at the plaque unveiling event

The Lyceum of Greek Women of Montreal are proud supporters of women's care

There's a Greek idiom that says, Κράτα με να σε κρατώ ν'ανεβούμε στο βουνό (Hold my hand, and I'll hold yours, so we can climb the mountain.) This beautiful sentiment perfectly embodies the work of the Lyceum of Greek Women of Montreal, which brings together 200 women to foster community, preserve Greek tradition and give back.

Since 2019, the Lyceum of Greek Women has worked hand-in-hand with the MUHC Foundation to support women's health and the early detection of ovarian and endometrial cancers. The group has held highly successful charity fashion shows, raising hundreds of thousands of dollars to benefit the DOvEE Project for the early detection of ovarian and endometrial cancers.

On October 17, 2023, the MUHC Foundation honoured the Lyceum of Greek Women's generosity with a plaque in the MUHC's surgical oncology unit. The plaque reads "Melina's Room," a tribute to two strong Greek women. Melina Mercouri was the Minister of Culture and Sport of Greece who lost her life to lung cancer. Closer to home, Melina Tsagaropoulos is a young Montreal woman living with ovarian cancer and receiving treatment at the MUHC. This gesture is a testament to the Lyceum of Greek Women's passion for supporting women.

Breast Cancer

Revolutionize Treatment and Care

Thanks to better screening and therapies, breast cancer isn't the force it once was. Far fewer Canadian women die of the disease than did 20 years ago. But it's not enough: 5,000 Canadian women will die from this terrible disease this year alone. The MUHC is raising funds to not only save the lives of women with breast cancer, but enrich them.

The Boob Squad softball team

The PINK Charity Softball Tournament raises \$67K to strike out breast cancer

Fourteen teams stepped up to the plate from July 7–9, 2023 to play softball for a good cause.

This annual event by Dorval-based cancer awareness and fundraising group The PINK raised \$67,500 in support of the MUHC's Breast Clinic Wellness Program. Program founder and director Dr. Sarkis Meterissian was there to throw the opening pitch and cheer on the teams.

The MUHC's Breast Clinic Wellness Program was created to ensure every breast cancer patient receives the care they need to return to happy, healthy lives. The Wellness Program is completely donor funded and offers a variety of free resources including access to counselling, kinesiologists, nutritionists, sex therapists and more.

Thank you to everyone who came out to play, watched in the stands and donated!

Pink in the City's Raise Craze and gala raise \$325K to support wellness for breast cancer patients

Pink in the City's annual Raise Craze head shaving fundraiser and gala raised a remarkable \$325,000 for the MUHC's Breast Clinic Wellness Program.

The 8th annual Raise Craze featured brave volunteers, including MUHC colleague and breast cancer survivor Martine Nagy and 14-year-old Zoe Scappaticcio, who shaved their heads in support of this cause that is so close to their hearts.

The Pink in the City gala, hosted at glitzy Embassy Plaza in Laval, was a night filled with laughter, many emotions, and a collective sense of hope. Dr. Sarkis Meterissian, Director of the Breast Clinic, spoke on the resilience of survivors, and the way they inspire his work. Marie-Hélène Laramée, the MUHC Foundation's President and CEO, commended the inspiring women advocating for each other and future generations.

Since its creation in 2016, Raise Craze has raised over \$1 million for breast cancer research, a testament to Pink in the City's commitment to advancing breast cancer care.

Irene Papaspyros has her head shaved in support of breast cancer care.

Pink in the City 2023 events

Le Bal Rouge 2023 supports breathtaking research and breath-giving care

Celebration was in the air at Le Bal Rouge 2023. The MUHC Foundation's signature gala raised a stunning \$1.68 million to support breathtaking research and breath-giving care at the Montreal Chest Institute of the MUHC. Taking place at the historic Windsor Station, the upscale, luxury event was an homage to *The Great Gatsby* and the Roaring 20s. Guests were treated to an unforgettable 1920s-inspired meal by renowned Montreal-based chef Armando Arruda, and danced to the upbeat, sultry musical notes of Paul Chacra and 1945 The Band.

Le Bal Rouge co-chairs Maria Della Posta, Lucie Guillemette, Sacha Haque and Lisa Giannone kicked off the evening with speeches about the incredible work of the MUHC's Division of Respiratory Medicine (also known as the Montreal Chest Institute) and the ground-breaking respiratory research taking place at the MUHC. Dr. Kevin Schwartzman, Director of the Division of Respiratory Medicine, was honoured at the gala for his leadership and his contributions to tuberculosis research and the MUHC's COVID-19 response.

L-R: Elizabeth di Genova, Eveline Wait and Edith Bolduc embraced the 1920s theme with flapper style.

Roaring into the 2020s

Respiratory

Breathe Easier

For people living with respiratory diseases, each breath can be a struggle. The Montreal Chest Institute (MCI) is on the forefront of breathtaking research and breath-giving care that will help our world breathe easier and live longer. We are raising \$10 million to help the MCI continue to provide compassionate, cutting-edge care to its patients.

The MCI Lobes claimed victory over the Raymond James Bulls in a surprise upset.

The 10th annual Raymond James Charity Softball Tournament

The 10th annual Raymond James Softball Tournament took place on September 23rd, raising funds for the Montreal Chest Institute Fund of the MUHC Foundation. The hospital's softball enthusiasts, ranging from nurses to administrative staff to physicians, gathered at Pierre Elliott Trudeau Park to witness the much-anticipated showdown between the two teams: the Raymond James Bulls and the MCI Lobes.

In a surprising twist, this year's game marked the end of the Bulls' winning streak, and Lobes fans enthusiastically cheered on their new winning team.

In total, \$33,435 was raised for the Montreal Chest Institute, a vital institution in the fight against respiratory diseases. The funds from this year's tournament are directly supporting the MCI's Advanced Ambulatory Sleep Program, a ground-breaking initiative that combines AI and data analytics to create tailored care for people living with obstructive sleep apnea. Sleep apnea affects 5.4 million Canadians, and thanks to Raymond James and its supporters, this innovative outpatient program will increase accessibility to care and help Montrealers breathe easier.

Infection & Immunity

Solve Humanity's Deadliest Puzzles

The McGill Interdisciplinary Initiative in Infection and Immunity (MI4) was created to address the global threat of infection. It brings together over 250 researchers to find solutions to tuberculosis, COVID-19, and the growing threat of antibiotic resistance. We are raising \$60 million to improve the health of people worldwide.

Dr. Irah King, PhD, Director of the McGill Centre for Microbiome Research

National Bank donates \$1.7M to fuel ground-breaking microbiome research

As part of its commitment to advancing medical research, National Bank has pledged \$1.7M to the McGill Interdisciplinary Initiative in Infection and Immunity (MI4), a group of over 250 researchers committed to finding lifesaving solutions to infectious diseases. This generous donation demonstrates National Bank's commitment to fostering collaboration and innovation within the medical field, and will position Quebec as a global leader in microbiome research.

The McGill Centre for Microbiome Research, led by Dr. Irah King, PhD, studies the microbiome, the collection micro-organisms—bacteria, viruses, and fungi—that live on or inside us. Professor King and his colleagues are conducting research that challenges traditional perceptions of microbes by demonstrating the ways they can be beneficial to our health. In fact, the microbiome is so influential in our health that researchers believe it plays a role in the development of illnesses from heart disease to depression, fibromyalgia and Alzheimer's disease.

Thank you to National Bank for recognizing the importance and potential of the microbiome.

Scotiabank donates \$1.35M to create a Montreal without hepatitis C

Viral hepatitis is one of the world's deadliest infectious diseases, affecting 58 million people worldwide. In Canada, Hepatitis C reduces life expectancy more than any other infectious disease, including HIV. And Hepatitis C is the only chronic viral infection that can be cured. A new \$1.35 million gift from Scotiabank to the MUHC Foundation is helping fund Montréal sans HépC, an innovative new program that aims to eliminate hepatitis C in Montreal through community-based advocacy and health care.

Montréal sans HépC has an ambitious goal: it plans to completely eliminate hepatitis C infections in Montreal by working closely with affected communities and tailoring support to their needs. The initiative has partnered with 16 community organizations to create grassroots interventions tailored to underserved, at-risk groups.

Thanks to Scotiabank, Dr. Marina Klein, Dr. Christina Greenaway and Dr. Julie Bruneau's work will make Montreal one of the first cities in the world to eliminate hepatitis C and serve as a model for addressing health needs of vulnerable populations.

L–R: Dr. Marcel Behr, Carl Dubeau, Maria Mangiocavallo, Dr. Marina Klein, Dr. Lucie Opatrny, Marc Parent.

“ Hepatitis C impacts our most vulnerable patients the hardest. They're often living with a lot of challenges and have difficulty accessing care. With Montréal sans HépC, we're finding new ways to bring these people care so they can be diagnosed and cured. We believe that our community-based approach will help us eliminate hepatitis C in Montreal.

—Dr. Marina Klein, Co-founder, Montréal sans HépC

Chiara Family Foundation Winter Classic hockey game raises \$300K

A cold, crisp day in February was the scene of a unique fundraiser in support of the MUHC Foundation. Eleven Montreal Canadiens alumni went head-to-head with a team of generous donors in a friendly outdoor game in support of infectious disease research at the MUHC. Conceived by MUHC Foundation board member Vincent Chiara, the event was a truly Canadian experience.

Coached by hockey legend Yvon Lambert, the Canadiens alumni team featured NHL greats Patrice Brisebois, Steve Begin, Jesse Belanger, Francis Bouillon, Mathieu Dandenault, Normand Dupont, Gaston Gingras, Sergio Momesso, Oleg Petrov and Richard Sevigny. Their opponents were members of Quebec's business community, who donated to the MUHC Foundation for the chance to play against former NHL stars.

The \$300,000 raised will support the McGill Interdisciplinary Initiative in Infection and Immunity (MI4). For all involved, the true winners are the patients who will one day benefit from new innovations in infectious disease medicine.

Habs alumni and generous donors go head-to-head in a friendly outdoor game.

A chance to play with NHL stars

Corporate & Community Giving

There are so many aspects to providing top-quality care, and the MUHC Foundation strives to do everything it can to equip the MUHC's physicians and researchers to change lives. In addition to the campaigns outlined above, we are raising millions for a wide range of other important priorities at the MUHC with the support of corporate and community donors.

MUHC staff work in the operating room.

Trottier Family Foundation supports green initiatives at the MUHC

Did you know that health care is responsible for 5% of global emissions? Shockingly, if global health care was a country, it would be the fifth greatest polluter. A new \$280,000 gift from the Trottier Family Foundation is helping the MUHC cut emissions caused by anesthetic gases.

Just like we see in medical dramas, anesthesia is delivered to patients through a mask over their mouth and nose. As the patient breathes in, the anesthesia puts them to sleep. Only 5% of the gases used are absorbed by the patient. The rest—a staggering 95%—are released into the atmosphere. Not only is this a waste, they are potent greenhouse gases.

With the support of the Trottier Family Foundation, the MUHC is piloting a new program that will tackle both carbon emissions and waste. In partnership with Ontario-based Blue-Zone Technologies, the MUHC is implementing the Deltasorb® system, which recaptures unused anesthetic gases in metal canisters and recycles them.

As the effects of climate change become more and more evident, it is essential that hospitals like the MUHC make changes to ensure a lower carbon footprint. With the support of the Trottier Family Foundation, we are one step closer to creating a greener MUHC.

The Fiera Capital Award for Diversity, Equity and Inclusion in Health Care Research

Historically, scientific funding has not always been equitable. Certain groups have been underfunded or overlooked, including researchers from Black, Indigenous and other racialized communities. To help close this gap, Fiera Capital committed \$120,000 to create the Fiera Capital Award for Diversity, Equity and Inclusion in Health Care Research.

The awards provide critical funding to MSc and PhD students who have great potential to advance medical research based on the excellence of their academic record, and who belong to a racialized group. Early-career funding is essential to a researcher's future success. If scientists from Black, Indigenous and other racialized communities don't receive grants early on, it can affect the trajectories of their entire careers. The new awards hope to help address this shortfall.

Nadine Renaud-Tinker announces RBC's renewed commitment to the RBC Art and Heritage Centre at the MUHC.

RBC funds MUHC Art and Heritage Centre

A \$300,000 gift from RBC is supporting the MUHC's RBC Art and Heritage Centre to bring the healing power of art to patients. The centre holds an extensive collection of art and historical objects that detail the rich medical history of Montreal. It curates permanent and rotating art exhibitions by local contemporary artists at all sites of the MUHC.

On April 18, 2023, RBC and the MUHC Foundation celebrated the gift with a vernissage cocktail at the atrium of the Research Institute of the MUHC. The event featured *Geomancy*, an eclectic merging of art and nature by renowned printmaker Catherine Farish. Thanks to RBC's generous gift, the event marked the RBC Art and Heritage Centre's first exhibit on public display since the beginning of the COVID-19 pandemic.

Desjardins donates \$500K to support career training for health science students

Finding a career after graduation can be daunting for anyone. For those with Master's degrees and PhDs, the path to finding rewarding work in their specialized fields can be an exciting challenge. A new \$500,000 commitment from Desjardins to the Desjardins Centre for Advanced Training (DCAT) at the RI-MUHC is supporting trainees in health research on their journey toward a fulfilling career.

DCAT was created in 2009 with the mission to introduce health and life sciences trainees to a wide array of career possibilities. The 1,600 trainees at the RI-MUHC have access to four comprehensive programs to help them succeed.

The success of the DCAT program has a ripple effect: it connects highly trained experts with careers where they can have a vast impact on health care and life sciences. Thank you to Desjardins for their commitment to the future of health science.

L–R: Maxime Lafrance, Dr. Louise Pilote, Marie-Hélène Laramée, Michel Cantin, Johanne Brousseau and Edith Bolduc.

Members of the MUHC Foundation's staff pitch three inspiring women's health projects to 100+ Women Who Care Montreal.

100+ Women Who Care Montreal donate to fill the research gap in women's health

On October 3, 2023, 100+ Women Who Care Montreal, an inspiring grassroots organization that raises funds for local charities, led a fundraising event at the charming Atwater Club in support of the MUHC Foundation. In total, \$20,005 was raised for women's health, supporting projects including the Women's Healthy Heart Initiative, DOVEE and OncoDrive, a clinical trial that tests the DNA of breast cancer patients to help predict recurrence.

The MUHC Foundation thanks 100+ Women Who Care Montreal for their pivotal role in advancing care for women, an important step in addressing the disparity in women's health research.

Intrepid runners raise \$35K to support patient care at the MUHC

On April 22, 2023, seven intrepid teams from the McGill University Health Centre (MUHC) and the MUHC Foundation ran for good causes at the MUHC.

An annual MUHC Foundation event, Run for a Reason empowers members of our community to fundraise in support of excellence in research and care at the MUHC. Runners form teams, fundraise and then run either 5k, 10k or 21k in the 21k de Montréal. In 2023, we raised over \$35,000 in support of research and care at the MUHC.

Thank you to our fantastic teams:

- Smart molecules for targeted therapy and cancer immunology
- Chronic Viral Illness Service
- MUHC Foundation
- Cancer therapeutics
- Montreal Chest Institute
- Anne's Team for Social Services
- Société de recherche sur le cancer

With your support, Run for a Reason was a great success.

The Chronic Viral Illness Service running team show off their medals.

5K, 10K or 21K for a good cause

The power of giving together

Throughout the year, our community of generous donors responded to a number of important campaigns in support of cancer research and care, respiratory care and much-needed funds for the MUHC's Emergency Department. With gifts via mail, email and social media, you raised an extraordinary \$2.7M to ensure every patient receives the very best care. This astounding total includes the following campaigns:

♥ Breast cancer research and care - \$30K

When Claire Trottier found the lump in her breast, she wanted to believe it was a lymph node. Deep down, she knew it was cancer. Claire endured nearly a year of treatment at the MUHC. Determined to give back, she shared her story with our community, inspiring donations in support of breast cancer care.

♥ Respiratory care - \$68K

We asked for your help last spring to support new equipment to improve patient care at the Montreal Chest Institute. You responded, donating over \$68,000 to help respiratory patients breathe easier.

Emergency Department - \$80K

The emergency room is a lifeline when you have nowhere else to turn. Your support ensures that the ER has everything it needs to help patients heal.

Cancer research - \$64K

Imagine a world where cancer can be found long before it forms a life-threatening tumour. It's not just possible—it's happening. In autumn, we reached out to you to help fund ground-breaking research into liquid biopsy, a new technique that can detect and monitor cancer. You responded with over \$64,000 in donations to support the future of cancer care.

When we Dream Big together, amazing things happen.

We cannot thank you enough for your loyalty, your generosity, and your belief in our mission. Your support of the physicians, nurses, researchers and students of the MUHC ensures that their big dreams can be realized, and that our province stays healthy.

Together, we are changing the course of lives and medicine, and in the process, we are changing the world. You play an instrumental role in keeping our community healthy, and the future of medicine hopeful. You help ensure every patient at the MUHC receives compassionate care.

Whether for lifesaving equipment, innovative research, patient programs, training for young medical staff or critical infrastructure, your support helps us continue to save lives.

Thank you.

*Dr. Nicole Ezer, Division of Respiratory
Medicine*

Thank you for Dreaming Big with us.
