

# RECOGNOSCO

## Innovative Voice AI technology built for partners.

Powering software partners across the globe with the latest in voice technology.

With the developments in AI and the significant advancements in technology generally, expectations on software providers have never been higher. End customers, be those medics, lawyers or corporate professionals, expect the latest and greatest in tech and so the importance of selecting the right technology partners is instrumental in your ability to deliver. But what does that vendor relationship look like? Do you have trust and confidence in your tech partner? Are you in it together or are you competing for the same business? Does your relationship feel one-sided?

Recognosco provide the ultimate partner experience. We provide solutions with an in-direct focus. We work with partners to develop mutually beneficial relationships with solutions tailored around you. **Atlas by Recognosco, is our Voice AI, speech recognition platform that is based on Neural Network and Deep Learning Technology.** Providing the highest levels of speech recognition accuracy, out of the box.

Enabling the creation, sharing and auditing of documents and medical reports quickly and effortlessly at a time and place convenient for your customers - using only their voice.

### Features and Functionalities

- Fast and accurate speech recognition with no training necessary. Utilising Neural Network and Deep Learning Technology
- Flexible and simple deployment methods – Atlas facilitates partners in quickly speech enabling their solution. Enabling faster time to market on any device, via Desktop, Web, Mobile (and API & SDK)
- Supports all medical specialities and subspecialties
- Partners can deploy Atlas both on-premise, in a Cloud environment, or even a combination of both
- One concise offering covering all use cases within a single SDK – enabling end users to access speech recognition in various ways on the same platform
- Easy to use and intuitive. The Recognosco Team has many years' experience

### Key Features

#### ✓ Highly accurate Voice AI tech

Utilising the latest and greatest tech based on Neural Network and Deep Learning

#### ✓ Simple and flexible integrations

Providing the simplest integration methods for fast time to market

#### ✓ Supporting on-premise & cloud offerings

#### ✓ One concise offering covering all use cases within a single SDK.

### Trusted by:

**Bert Groeneveld,**  
CEO at G2 Speech said:

*"We're delighted with the introduction of Atlas provided by Recognosco. The innovative, speech technology platform incorporates neural networks and deep learning and demonstrates the very highest levels of quality and accuracy. The next-generation technology is fast, efficient, and reliable. Our customers are noting significant benefits with the introduction of this new tech."*

in developing simple to use, intuitive speech recognition platforms specifically for the medical and legal markets

- Simple and robust correction by voice. Allows the author to produce reports without touching the keyboard
- Modern architecture offering lightweight components
- Small network footprint. Ideal for sites working remotely that don't have the fastest connections
- Comprehensive statistics available out of the box (OTTB) for ROI measurement and analysis
- Partner Resources Hub – a dedicated area for development and support of all speech resources. Updated on a regular basis to include specific customer/partner requests
- Speech recognition can take place on a local machine or via streaming. This provides partners with full flexibility to offer the right solution based on their customers' requirements.

## Benefits of working with Recognosco

- **In-Direct focus:** Recognosco does not sell direct. Developments and the future of the product is designed around partners
- **Flexible deployment and integration options:** Partners can deploy Atlas both on-prem, in a Cloud environment, or even a combination of both
- **Speech Tech Experts:** Having been involved in speech recognition since its inception, the team at Recognosco have many years of experience in the development, support and distribution of speech recognition technologies for professional document creation globally
- **High accuracy:** Based on the latest technology available - Neural Network and Deep Learning
- **Professional document creation focussed:** Speech technology that has been nurtured and developed specifically for use in healthcare and legal software solutions
- **Scalable solution provider:** Providing small scale to large enterprise solution partner enablement offerings
- **Better time to market:** Simple and efficient SDK enabling optimal implementation timeframes
- **Flexible and Fair Pricing:** Recognosco offer flexible and fair commercial models to allow partners to sell the technology in a way that fits with their own commercial models and markets.

**Dennis Feiler,**  
CEO at DFC Systems said:

*“Having worked with Recognosco for many years, we know and trust the knowledge and expertise of the team and their ability to deliver innovative, cutting-edge technology. We’ve been extremely impressed with the introduction of Atlas. The Neural Network and Deep Learning based technology makes a huge difference. Our technical and sales teams as well as first customers have all been overwhelmed by the accuracy and capabilities of the technology.”*
