PERMATIMBER®

What is PermaTimber?

PermaTimber is an exclusive range of pressure treated, incised timber products that is guaranteed against fungal decay and wood destroying insects for 15 years. It is WPA Benchmark approved.

What is incising?

Using specialist machinery prior to treatment, a series of incisions is cut into the ground contact area of the timber allowing for far greater preservative treatment uptake.

Where is it used?

Specifically designed for use in ground contact (i.e. fence posts, sleepers, decking joists and posts etc).

What timber is used?

PermaTimber is produced using UK grown FSC Certified Spruce, as well as some Larch and Douglas fir. This means it comes from well managed and sustainable sources

Has it been independently tested?

PermaTimber products have been independently tested by the BRE who concluded that they meet the requirements for BS8417 (2011) for a desired service life of 15 years.

Is it value for money?

The majority of cost when installing timber products is usually labour costs. If timber has to be replaced earlier than expected this can be time consuming and costly. Therefore, PermaTimber products represent great value for money when considering the whole-life cost of your products.
