TRADITIONAL CLOSEBOARD FENCING

About This Case Study

Dean Smith recommended installing a Feather edge fence along the boundary as this not only offered clean and tidy continual lines but also the security and privacy that were required by the customer.

PRODUCT USED

- 1.65m Feather edge boards
- 100x125 notched post
- 22x150x3m gravel board
- 75x75x3m Arris rails
- Capping and Counter rails
- 100x100 concrete repair spurs

This was a particularly challenging project.

Years of neglect had left the boundary site in a poor state of repair, badly overgrown and interspersed with piles of debris which all needed removing before work could commence.

Using closeboard fencing timber supplied by Cheltenham Fencing, local Installer network member Dean Smith completely replaced the run down fencing and given the ground conditions, with future maintenance in mind, the fence posts were given additional support using concrete repair spurs.
