

Davigel – Sysco France

Sysco France, a company born of the merger of Brake France and Davigel, occupies a unique position as producer and distributor of fresh, frozen and grocery food products for professional catering. Sysco France is a subsidiary of the Sysco Group, the world leader in the distribution of food and non-food products to catering professionals. Present throughout France, the mission of Sysco France is to create, select, manufacture and distribute the best products for our customers with exceptional quality of service. Sysco France offers its customers raw seafood and developed with more than 85 different species, both in fresh and frozen.

Sysco France, société née de la fusion de Brake France et de Davigel, occupe un positionnement unique de producteur et distributeur de produits alimentaires frais, surgelés et d'épicerie pour la restauration professionnelle. Sysco France est une filiale du Groupe Sysco leader mondial de la distribution de produits alimentaires et non-alimentaires aux professionnels de la restauration. Présent partout en France, la mission de Sysco France est de créer, sélectionner, fabriquer et distribuer les meilleurs produits pour nos clients avec une qualité de service exceptionnelle. Sysco France propose à ses clients des produits de la mer bruts et élaborés avec plus de 85 espèces différentes, aussi bien en frais qu'en surgelé.

Summary

Davigel has been partnered with Sustainable Fisheries Partnership (SFP) since 2013, when it became the international NGO's first foodservice partner and first partner based in France. In 2017, Davigel became the first French company to participate in the Ocean Disclosure Project, signifying the company's commitment to transparency in seafood supply chains.

The 2018 ODP profile covers the main wild-caught species sourced by Davigel in 2017.

"Sustainability is one of Davigel's 4 quality commitments. To broaden our scope and involve ourselves in the preservation of fisheries resources and conservation of marine environments, we have developed partnerships with two non-governmental organizations: SFP and WWF. Together with them, we put forward the best responsible fishing and farming programs based on international eco-certifications. By 2017, 82% of the volumes purchased were eco-certified, and 87% were classified as responsible or sustainable according to the Davigel Responsible Seafood Policy. In

In addition, we prohibit the commercialization of any identified endangered species on the IUCN list or classified IUU (Illegal, Unreported and Unregulated). Finally, for the rest, Davigel is involved in the improvement of sectors by participating in three Fishery Improvement Projects (FIPs). All this has enabled us to improve our overall sustainability Metrics indicator for our seafood from a score of 1.78 in 2013 to 1.42 in 2017, based on internal analysis and with a goal of 1."

"Le développement durable fait partie des 4 engagements qualité de Davigel. Pour élargir notre champ d'action et mieux nous impliquer dans la préservation des ressources halieutiques et la conservation des milieux marins, nous avons développé des partenariats avec deux organisations non-gouvernementales : SFP et le WWF. Avec eux nous mettons en avant les meilleures filières de pêche et d'élevage responsables en nous appuyant sur des écocertifications internationales. En 2017, 82% des volumes achetés étaient écocertifiés, et 87% étaient classés comme responsables ou durables. Par ailleurs, nous nous interdisons la commercialisation de toute espèce identifiée en danger sur la liste de l'UICN ou classée IUU (Illegal, Unreported and Unregulated). Enfin, pour le reste, Davigel s'implique dans l'amélioration de filières en participant notamment à 3 FIP = Projets d'Amélioration de Pêcheries. Tout ceci nous a permis d'améliorer le score de notre indicateur Metrics de durabilité globale en ce qui concerne nos produits de la mer en passant d'une note de 1,78 en 2013 à 1,42 en 2017, sachant que la note peut aller de 4 au pire à 1 à l'optimum."

- No additional notes.

American lobster

Homarus americanus

Pots and traps

Certified

Well managed

Gulf of St. Lawrence
South

Fishery countries:
Canada

Environmental Notes

- This fishery is unlikely to impact PET species. The risk to marine mammals of entanglement in lobster gear is considered low.
- Bycatch for this fishery is considered low.
- This fishery is unlikely to have a significant impact on the sea bed.

General Notes

- No additional notes

American sea scallop

Placopecten magellanicus

Dredge

Certified

Well managed

Eastern Georges
Bank

Fishery countries:
Canada

Environmental Notes

- This fishery is unlikely to impact PET species.
- The gear type used for this fishery is considered selective and bycatch is low. Among the most common species caught as bycatch are monkfish, invertebrates, skate species, and yellowtail flounder.
- The fishery is conducted with towed steel scallop dredges that directly impact on the sea bed. However, fished areas are likely to be subject to considerable natural disturbance and fishers use detailed habitat maps to minimise bottom contact time.

General Notes

Caveat

The environmental notes for this fishery are based on a provisional assessment and are not derived from the FishSource profile.

St Lawrence River

Fishery countries:

Canada

Environmental Notes

- Profile not yet complete.
- Profile not yet complete.
- This fishery is unlikely to have a significant impact on the sea bed.

General Notes

- No additional notes.

Northern prawn

Pandalus borealis

Bottom trawl

Certified

Well managed

Barents Sea

Fishery countries:

Norway

Environmental Notes

- Profile not yet complete.
- Bycatch is a risk for this fishery, but there are mitigation measures in place.
- Bottom trawls will directly impact on the sea bed.

General Notes

- This fish plays an important role in the marine food web and so potential impacts on the wider marine ecosystem must be monitored.

Northern prawn

Pandalus borealis

Bottom trawl

Certified

Well managed

Western Greenland

Fishery countries:

Greenland

Environmental Notes

- This fishery is unlikely to impact PET species.
- Bycatch for this fishery is considered low.
- Bottom trawls will directly impact on the sea bed.

General Notes

- This fish plays an important role in the marine food web and so potential impacts on the wider marine ecosystem must be monitored.

Norway lobster

Nephrops norvegicus

Bottom trawl

Not certified or in
a FIP

Needs
improvement

Off Horn's Reef

Fishery countries:

Netherlands

Environmental Notes

- Profile not yet complete.

General Notes

Other ratings

The Marine Conservation Society categorises the Off Horn Reef fishery for Norway lobster caught with demersal otter trawl as "Rating 4 (orange)".

Caveat

The stock status and management rating for this fishery is based on a provisional assessment and is not derived from the FishSource profile.

Orange roughy

Hoplostethus atlanticus

Bottom trawl

Certified

Well managed

Challenger Plateau
and Westpac Bank

Fishery countries:

New Zealand

Environmental Notes

- This fishery is believed to have minimal impacts on PET species.
- Bycatch for this fishery is considered low.
- Bottom trawls will directly impact on the sea bed. There is insufficient data available to assess significance of impacts on vulnerable habitats such as cold water coral reefs.

General Notes

- No additional notes.

Orange roughy

Hoplostethus atlanticus

Bottom trawl

Certified

Well managed

East and South
Chatham Rise

Fishery countries:

New Zealand

Environmental Notes

- This fishery is believed to have minimal impacts on PET species.
- Bycatch for this fishery is considered low.
- Bottom trawls will directly impact on the sea bed. There is insufficient data available to assess significance of impacts on vulnerable habitats such as cold water coral reefs.

General Notes

- No additional notes.

Midwater trawl

Certified

Well managed

Patagonian

grenadier

*Macrurus
magellanicus*

Argentina

Fishery countries:

Argentina

Bottom trawl

Environmental Notes

- This fishery interacts with several seabirds, sharks and skates classified as ETP species.
- Bycatch is a concern for this fishery. An MSC condition put in place to determine levels of impact on bycatch species has now been closed. This fish is also caught as a bycatch species in other fisheries.
- Bottom trawls will directly impact on the sea bed.

General Notes

Caveat

The environmental notes for this fishery are partly based on information from sources other than the FishSource profile.

Picked dogfish

Squalus acanthias

Gillnets and
entangling nets

Certified

Well managed

US Atlantic

Fishery countries:

U.S.

Environmental Notes

- This fishery interacts with seabirds, sea turtles and marine mammals but is thought unlikely to have significant impacts on PET species. However, an MSC condition has been set in place requiring the fishery to show that impacts on Atlantic right whales are known and are highly likely to be within accepted limits.
- Bycatch is considered low volumes and there are measures in place to reduce it.
- This fishery is unlikely to have a significant impact on the sea bed.

General Notes

Caveat

The environmental notes for this fishery are based on information that is derived from sources other than the FishSource profile.

Pink salmon

*Oncorhynchus
gorbuscha*

Alaska

Fishery countries:
U.S.

Purse seine
Gillnets and
entangling nets

Certified

Well managed

Environmental Notes

- While encounters with marine mammals and birds have been documented in this fishery, the impact on PET species is not thought to be significant.
- There is no risk of bycatch for this fishery. Catches of other salmon species are accounted for in the pink salmon management.
- This fishery is unlikely to have a significant impact on the benthic habitat.

General Notes

Caveat

The environmental notes for this fishery are based on information that is partly derived from sources other than the FishSource profile.

**Red swamp
crawfish**

Procambarus clarkii

Pots and traps

Not certified or in
a FIP

Profile not yet
complete

Guadalquivir delta

Fishery countries:

Spain

Environmental Notes

- There is a lack of information on interactions with PET species in this fishery. The only known significant impact with this fishery is the effect of the introduced crawfish species on the indigenous crawfish species.
- Bycatch for this fishery is considered low.
- This is a freshwater fishery close to rice fields, so the habitat impact is very limited.

General Notes

- No additional notes.
-

Saithe

Pollachius virens

Barents Sea, Faroese waters, Icelandic waters

Fishery countries:
France, Faroe Islands, Iceland, Norway

Bottom trawl
Long line

Certified

Well managed

Environmental Notes

- There are risks to marine mammals with this fishery, but there are mitigation measures in place.
- Bycatch for this fishery is considered low.
- The impact depends on the gear type. Bottom trawls will have the greatest impact on the sea bed.

General Notes

- No additional notes.

Saithe

Pollachius virens

North Sea, Skagerrak, west of Scotland and the Rockall

Fishery countries:
France

Bottom trawl

Certified

Well managed

Environmental Notes

- There are risks to marine mammals with this fishery, but there are mitigation measures in place.
- Bycatch for this fishery is considered low.
