

Chafe-Pro®

Chafe-Pro® is a durable and high performance chafe gear utilized in many industries around the world.

Description

SWOS utilizes and supplies Chafe-Pro® chafing gear on many of our synthetic products. Chafe-Pro® removable chafe gear is a cost-effective means for preventing chafe abrasion to synthetic lines. This high-performance chafe gear serves to protect one's investment in mooring, anchor, towing and ship assist lines, and can be installed quickly even in difficult mooring situations.

Features

- Ease of Installation/Removal: Chafe-Pro is hand wrapped around the line to be protected. It can be installed on lines already in position.
- No Lacing/Lashing of Lines Required: Chafe-Pro uses a unique arrangement of nylon hooks to hold it in its protective position.
- High Resistance to Abrasion: Chafe-Pro, made from marine grade abrasion-resistant polyester and nylon textiles, is designed to protect lines and boats from abrasion.
- UV Protection: Chafe-Pro units are resistant to damage from UV radiation.
- Mildew Resistant: Chafe-Pro units will not deteriorate from the effects of mildew.
- High Flexibility: Chafe-Pro can be installed in an eye-splice turned on a capstan or windlass, or heaved through a chock.
