Strategic Partnership

Since our inception in 1985, SWOS has been a distributor of Samson rope products. Starting as a Regional Service Center, progressing to become a Master Distributor, then becoming one of three Master Fabricators worldwide, our partnership with Samson, the leader in fiber rope technology has grown.

We are now Samson's largest distributor, worldwide. Working with Samson's industry leading R&D team, Engineering Department, and Technical Services Department, SWOS has gained the confidence that we have the right partner to ensure we provide the best products, the correct products, and the most reliable products in the industry to our customers.

With customer centric approach for more than 135 years, Samson is the worldwide leader in the development and manufacture of high–performance synthetic rope solutions. Samson has forged the path of innovation and technology advancements in fiber, coatings, and rope constructions to produce ropes with unprecedented performance characteristics.

Samson supports SWOS with an unwavering commitment to our partnership that goes beyond superior synthetic rope products. SWOS and Samson work in close collaboration to solve specific customer needs through research and development, custom design services, application engineering, pre- and post-sales support, field service technicians, extensive technical resources, and training. The cumulative result is twofold: stronger and more durable products supported by both a manufacturer and a supplier that truly understands the requirements, demands, and needs of the industries we serve.

Samson operates from two state-of-the-art facilities in Ferndale, Washington and Lafayette, Louisiana. Both are Quality Assurance ISO 9001 certified, utilize LEAN manufacturing, and are equipped with certified testing equipment to assess the characteristics of raw materials and finished goods before being sent to customers. These facilities are both strategically located near major shipping ports to effectively service customers around the world.
