

# Scheduling Overview

Whether your organization utilizes manual processes, such as spreadsheets and whiteboards, or outdated technology, efficient scheduling is critical to your organization's success and deserves smarter technology. Many organizations don't realize the amount of time and energy that is being wasted on schedules that can be streamlined or even automated with the right tools. That is why TCP offers several scheduling solutions to fit even the most complex needs.

## Standard Scheduling

Using TCP's Standard Scheduling, your organization can manage recurring or ad-hoc schedules efficiently with just a few clicks. Build a schedule once and let it repeat indefinitely, or pivot employee schedules quickly to adapt to new demands. Plus, our solution integrates directly with your time and attendance and leave management data to minimize time spent making tedious updates every time a time-off request is approved.

## Advanced Scheduling

Designed with Public Safety in mind, TCP's Advanced Scheduling capabilities handle more complex challenges that organizations might face. Whether you need more employee interactivity, such as letting them swap, drop or offer shifts to one another, or you need to ensure qualified employees are filling the appropriate positions, TCP's Advanced Scheduling can handle it. View a live shift roster that tells you what percentage of shifts are filled and who you still need to schedule, or set up notifications so you are on top of every update made to the schedule.

## Humanity Scheduling

With the acquisition of Humanity, TCP's scheduling portfolio can now include impressive capabilities including Demand-Driven Scheduling, auto-build and auto-fill scheduling tools, and a new mobile app. Set up qualifications, shift requirements or even input your organization's data to optimize and automate the schedule-building process.
