

CtrlTrack is Tower's integrated asset management and tracking system designed to help customers to better manage and keep track of equipment onboard vessels. Being able to track small assets and items of equipment that get moved around helps reduce costs associated with lost, damaged or under-used items.

Using barcode, RFID and GPS technology, the system can be used to monitor the location and status of items onboard, and track maintenance and service requests. This helps improve inventory management and auditing, can provide for advanced maintenance planning, aids in more efficient use of assets, reduces the costs associated with these situations.

## CtrlTrack

**1** Reduce downtime and maintenance

**2** Reduce total product cost

**3** Optimise asset inventory
