

Summer Wear

When choosing your summer workwear, it's important to wear a cap to protect from the sun, and garments that use breathable materials, which also provide UPF40+ protection. Protect yourself from summer showers with the lightweight softshell jacket.

Winter Wear

When it comes to protective gear for the cold winter, wearing multiple layers (including base layers and thermals) is essential to combine with your mid and outer layers such as the fleece, softshell and bodywarmer that all zip into the storm coat.

Wet Weather

To protect yourself from wet conditions, wear a hi vis over-trouser and stormcoat. If its colder use the interactive fleece or bodywarmer. Ensure you fully zip up the stormcoat, adjust the hood, and use the internal cuffs to prevent rain running up your sleeves.

Female Wear

Instead of a smaller unisex option, our range of female workwear is designed for women, and includes sweatshirts, trousers, softshell jackets, footwear, and storm jackets.
