

The i-mop is a revolutionary, flexible and powerful range of floor scrubbers that clean up to 70% faster than conventional wet mopping and up to 30% faster than conventional auto scrubbing.

A game-changer for its efficiency and eco-credentials, the i-mop uses microfibre technology, requiring less water and fewer chemicals which reduces its environmental impact. When used with Tower's CtrlFlow solution, it becomes the ultimate in environmentally friendly cleaning.

One cruise line that started using the i-mop reduced water usage by up to 143,000 litres per ship and experienced increased staff efficiency and productivity with a 50% reduction in cleaning time.

The time and water used, to clean 300m² with usual cleaning methods

1 Reduce water used for floor cleaning by up to 90%

2 Improve staff productivity by 200%

3 Get 90% cleaner surfaces

See how much time, money and water you save by using an i-mop on the same 300m²
