

RFID Container Solution

Secure 24/7 on-site access to your products

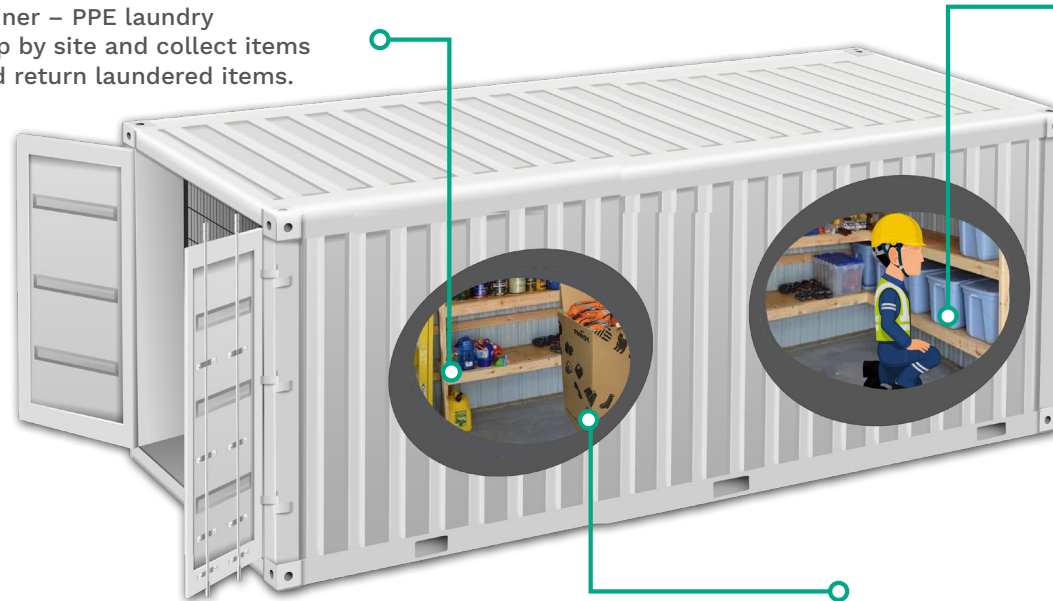

How does RFID work?

Radio frequency identification technology (RFID) is an automatic identification method that uses radio waves to read and capture information stored on a tag attached to an object.

User fobs are configured to track who enters and what items are taken. Back up fobs can be held on site as a redundancy

Laundry container – PPE laundry specialists stop by site and collect items for laundry and return laundered items.

PPE and workwear recycling service container for secure garment disposal. This can be collected regularly as per your needs with annual certification provided.

Secure access to products 24/7. General PPE in all sizes is stocked for ad-hoc usage.

The solution

- On-site 20 ft container with racking and RFID doorway installation
- Product and wearer tracking data and analytics
- How-to guides for taking self-measurements
- Starter packs with wearer names are ready for collection within seven days
- RFID to track all PPE in circulation, who has it, and low product levels
- Re-ordering of general PPE correct quantity of PPE simple and automated

Boost sustainability

- Recycled packaging solution to support sustainability initiatives
- Packs are delivered in boxes with all plastics removed.
- Boxes can be flattened and collected and reused for full circularity
- Secure garment recycling service for zero-landfill end of life solution
- Annual certification provided by recycling service for display and use
